## Preface

The Health and Retirement Study (HRS) is a nationally representative longitudinal survey of more than 42,000 individuals over age 50 in the United States. Its remarkable success has resulted in a [number of surveys around the world](#) being designed to be comparable with the HRS.

In order to make the data more accessible to researchers and to facilitate such comparisons, we, the USC Gateway to Global Aging Data team, created the Harmonized HRS, a user-friendly version of a subset of the HRS. The Harmonized HRS initiative is part of a larger set of projects. With funding and support from the National Institute on Aging, we have also created Harmonized MHAS (Mexico), Harmonized ELSA (England), Harmonized SHARE (Europe + Israel), Harmonized CRELES (Costa Rica), Harmonized KLoSA (South Korea), Harmonized JSTAR (Japan), Harmonized TILDA (Ireland), Harmonized CHARLS (China), Harmonized LASI (India), and Harmonized MARS (Malaysia) data. Further information about these Harmonized data files with questionnaires and other metadata is available on our searchable website, <https://g2aging.org/>.

In creating the Harmonized data files, we have followed conventions of variable naming and data structure first developed by the RAND Center for the Study of Aging for the RAND HRS Longitudinal File, which contains many variables derived from the HRS core data. The Harmonized HRS data file was built to supplement and to be used in conjunction with the RAND HRS Longitudinal File, and includes additional harmonized measures that have not been incorporated into the RAND HRS Longitudinal File, as well as variables that facilitate cross-country analyses. The Harmonized HRS and the RAND HRS Longitudinal File generally do not overlap in content, although there are a select number of variables that appear in both. The Harmonized datasets created by the Gateway to Global Aging Data for the other HRS Family Surveys are intended to be comparable to the combination of variables present in the Harmonized HRS and in the RAND HRS Longitudinal File. Both the RAND HRS Longitudinal File and the Harmonized HRS are longitudinal files and incorporate all available waves of HRS data. This document describes the Harmonized HRS data.

Note, however, that HRS license agreements do not allow us to disseminate the data directly. Instead, HRS distributes the Harmonized HRS among its data files, which it makes available on their website at <https://hrsdata.isr.umich.edu/data-products/contributed-projects>. We also make available a Stata script (“do file”) that generates these derived variables from the original HRS data files that the user must obtain from the HRS website at <https://hrsdata.isr.umich.edu/data-products/public-survey-data>. Additional information about HRS can be obtained from HRS’s website at <https://hrs.isr.umich.edu/about>.

We are grateful for the continuing support of and funding from NIA. We have greatly benefited from the discussions with and the suggestions from our colleagues Jennifer Ailshire, Marco Angrisani, Eileen Crimmins, Alexandra Crosswell, Peifeng Hu, Erik Meijer, Lindsay Ryan, Jacqui Smith, and David Weir. We would also like to acknowledge our current and former colleagues who worked on previous versions of the Harmonized HRS: Sidney Beaumaster, Sandy Chien, Ashley Lin, Sarah Petrosyan, Giacomo Rebellato, Kanghong Shao, Kylie Thomas, and Marieta Valev.

## Requested Acknowledgment

We ask all users of the Harmonized HRS to please inform our team of any written analysis using data from the Harmonized HRS or information from the Harmonized HRS Codebook by sending an email to [papers@g2aging.org](mailto:papers@g2aging.org). We also ask users to include the following acknowledgement in their written work: "This analysis uses data or information from the Harmonized HRS dataset and Codebook, Version D as of August 2023 developed by the Gateway to Global Aging Data. DOI: <https://doi.org/10.25549/4smz-hp46>. The development of the Harmonized HRS was funded by the National Institute on Aging (R01 AG030153, RC2 AG036619, 1R03AG043052). For more information, please refer to <https://g2aging.org/>."

## HRS Version and Acknowledgment

This version incorporates the following HRS data and RAND data products:

- 1992 HRS Core (Final) v.2.0 - HHLIST
- 1992 RAND HRS Fat File v.1B
- 1993 HRS Core (Final) v.2.10 – BHP21, BOP21
- 1993 RAND HRS Fat File v.2A
- 1994 HRS Core (Final) v.2.0 – W2HHLIST
- 1994 RAND HRS Fat File v.1A
- 1995 HRS Core (Final) v.2.0 – E\_HP, PR\_MC
- 1995 RAND HRS Fat File v.2B
- 1996 HRS Core (Final) v.4.00 – D\_MC, E\_HP, PR\_MC
- 1996 RAND HRS Fat File v.4A
- 1998 HRS Core (Final) v.2.3 – D\_MC, E\_HP, PR\_MC
- 1998 RAND HRS Fat File v.2C
- 2000 HRS Core (Final) v.1.0 – D\_MC, E\_HP, PR\_MC
- 2000 RAND HRS Fat File v.1D
- 2002 HRS Core (Final) v.2.0 – E\_MC, G\_HP, PR\_MC
- 2002 RAND HRS Fat File v.2C
- 2004 HRS Core (Final) v.1.0 – E\_MC, G\_HP, PR\_MC
- 2004 RAND HRS Fat File v.1C
- 2006 HRS Core (Final) v.4.0 – E\_MC, G\_HP, PR\_MC
- 2006 RAND HRS Fat File v.4A
- 2008 HRS Core (Final) v.3.0 – E\_MC, G\_HP, PR\_MC
- 2008 RAND HRS Fat File v.3A
- 2010 HRS Core (Final) v.6.0 – E\_MC, G\_HP, PR\_MC
- 2010 RAND HRS Fat File v.6A
- 2012 HRS Core (Final) v.3.0 – E\_MC, G\_HP, PR\_MC
- 2012 RAND HRS Fat File v.3A
- 2014 HRS Core (Final) v.2.0 – E\_MC, G\_HP, PR\_MC

- 2014 RAND HRS Fat File v.2B
- 2016 HRS Core (Final) v.2.0 – E\_MC, G\_HP, PR\_MC
- 2016 RAND HRS Fat File v.2C
- 2018 HRS Core (Final) v.2.0 – E\_MC, G\_HP, PR\_MC
- 2018 RAND HRS Fat File v.2B
- 2020 HRS Core (Final) v.1.0 – E\_MC, G\_HP, PR\_MC
- 2020 RAND HRS Fat File v.2A
- Cross-Wave: Census Region/Division and Mobility File v.8.2
- Cross-Wave 2020 Tracker File v.e.3.0
- 2015 HRS Mailout Life History Mail Survey (LHMS) v.1.0
- 2017 HRS Mailout Spring Life History Mail Survey (LHMS) v.3.0
- 2017 HRS Mailout Fall Life History Mail Survey (LHMS) v.2.0
- 2019 HRS Mailout Spring Life History Mail Survey (LHMS) v.1.0
- RAND HRS Longitudinal File 2020 v.1
- RAND HRS Family Data File 2018 v.2

The HRS is supported by the NIA, supplemented by the Social Security Agency, and operated from the Institute for Social Research (ISR) at the University of Michigan. The RAND HRS data file, the RAND Family data file, and the RAND HRS Enhanced Fat Files are the result of cooperation between the NIA, SSA, ISR at the University of Michigan, and the RAND Center for the Study of Aging.

## What's New in Version D of the Harmonized HRS?

Version D incorporates the latest released version of HRS and RAND HRS and includes the early version of Wave 15 data. It contains 42,406 observations or rows. It is a Respondent-level file so each row represents a unique Respondent. It also adds many new variables and makes adjustments and corrections.

We have added the following variables to the file:

### Health:

- We added **RwNAGI10, RwNAGI10M, RwNAGI10A, RwNAGI8, RwNAGI8M, and RwNAGI8A** as additional mobility summaries.

### Assistance and Caregiving:

- In an effort to further distinguish the types of care the respondent and/or their spouse provide to others, we created **HwGAPCARE**, indicating whether the respondent or spouse provides personal care for their parents, and **HwGPCHORE**, indicating whether the respondent or spouse provides help with errands and household chores to their parents.

### Psychosocial:

- We added variables indicating the respondent's domain-specific satisfaction for all available waves: **RwSATHOME, RwSATAREA, RwSATLSR, RwsATFAM, RwSATFNNCL, RwSATHLTH, and RwSATWLIFE**.
- We added variables indicating the respondent's Cantril ladder rating, **RwCANTRIL**, and their change in position, **RwCANTRILC**, for all available waves.
- We added variables indicating the respondent's PANAS-X positive and negative affect items, as well as their associated summary scores for all available waves.
- We added variables indicating the respondent's MIDUS positive and negative affect items, as well as their associated summary scores. These are only available for Wave 8.
- We added variables indicating the respondent's CASP-19 quality of life items, as well as several associated summary scores. These are only available for Wave 7.
- We added variables indicating the respondent's Ryff's psychological well-being items, as well as their associated summary scores for all available waves.
- We added variables indicating the respondent's day reconstruction characteristics for all available waves: **RwDRDAY, RwDRWAKETM, RwDRSLEPTM, RwDRDATEM, RwDRDATEDAY, RwDRWLRSTD, RwDRNRMLDAY, and RwDRHLTHYES**.
- We added variables indicating the respondent's overall experienced well-being yesterday, as well as their associated summary scores for all available waves.
- We added variables indicating the respondent's day reconstruction activity-related participation yesterday for all available waves.

- We added variables indicating the respondent's activity-related positive and negative affective experiences yesterday, as well as several associated summary scores for all available waves.

We have made the following adjustments, improvements, and corrections to the data and documentation:

**Demographics:**

- We adjusted **RwIWMODE** and **RwLANG\_H** to take information from the tracker file rather than the wave-specific files. We further adjusted **RwIWMODE** so that the previous option 3, having the interview in-person and by telephone, is now option 4, and option 3 is now having a web interview.

**Health:**

- We renamed **RwRXCHOL** to **RwRXHCHOL** for consistency with other Harmonized datasets.
- We renamed **RwADLTOT\_H**, **RwADLTOTM\_H**, and **RwADLTOTA\_H** to **RwADLTOT6**, **RwADLTOT6M**, and **RwADLTOT6A** to emphasize comparability with other Harmonized datasets.
- We renamed **R2FALLINJ** to **R2FALLINJ1Y** to emphasize the different time period used in this wave.

**Cognition:**

- We adjusted the naming of **RwIQSCORE#** and **RwJORMSCORE** to **RwCIQSCORE#** and **RwCJORMSCORE** to avoid confusion with similar variables in Harmonized HCAP data.

**Family:**

- We adjusted **HwCHIDSLW** for Waves 13 through 15 to use data now available on the number of deceased children from the RAND HRS Family file for Waves 13 and 14.

**Assistance and Caregiving:**

- In an effort to further distinguish the types of care the respondent and/or their spouse provide to others, we removed **HwGCAANY** because it described multiple types of care for a limited group of recipients.
- We adjusted **RwRPFCAREDPM**, **RwRAPFCAREDPM**, **RwRIPFCAREDPM**, **RwRPFCAREHR**, **RwRAPFCAREHR**, and **RwRIPFCAREHR** to assign special missing value .e rather than special missing value .m if the respondent's only helper is an employee of an institution and we have no information on days or hours of help starting in Wave 6.
- We corrected the assignment of special missing value .w in Wave 2 for variables indicating the hours per day the respondent was helped by their children/grandchildren, relatives, and non-relatives and the total monthly out-of-pocket cost for ADLs, IADLs, and either ADLs or IADLs.

**Stress:**

- We no longer reverse code **RwMOMGRELA** in the calculation of **RAPWARM** so that higher values indicate more parental warmth.

- We reversed the coding direction for **RwSATJOB, RwDESERVE, RwSALARY, RwNSKILLS, RwCONTROL, RwnCONFLIC, RwSCRITZE, RwsLETDOW, RwsGETNEV, RwsDEMAND, RwkCRITZE, RwkLETDOW, RwkGETNEV, RwkDEMAND, RwoCRITZE, RwoLETDOW, RwoGETNEV, RwoDEMAND, RwfCRITZE, RwfLETDOW, RwfGETNEV, RwfDEMAND, RwlSRSPCT, RwpRSRVC, RwnOTSMRT, RwhARASS, RwpRTRMT, and RwaCTAFD** so that higher scores indicate higher stress levels. This change does not impact any summary scores.
- We corrected the assignments for **RALIVDIFFCH, RAPADIVCH, RAPADIECH, RASEPMOM, and RASEPDAD** to include values from life history interviews in 2015, 2017, and 2019, whereas these variables were previously only taking values from the 2017 life history interviews due to a coding error.

**Psychosocial:**

- We changed the name of **RwSATLIFE** in the previous version to **RwSATLIFE\_H** to further clarify the difference in scale used in comparison to comparable variables in other Harmonized datasets.

# 1. Introduction and Overview

This report documents the Harmonized HRS data files, a streamlined collection of variables derived from the Health and Retirement Study (HRS) meant to supplement the RAND HRS. HRS is a panel survey of people over age 50 and their partners in the United States. Its main goal is to provide panel data that enable research and analysis in support of policies on retirement, health insurance, saving, and economic well-being. The survey elicits information about demographics, income, assets, health, cognition, family structure and connections, health care use and costs, housing, job status and history, expectations, and insurance.

The HRS is primarily supported by the National Institute on Aging (NIA), with additional funding from the Social Security Administration (SSA) and is administered by the Institute for Social Research (ISR) at the University of Michigan. The products released by the Gateway to Global Aging Data are supported by the NIA.

The HRS is comprised of seven separate cohorts, summarized below:

Cohort	Year Born	Year of First Interview	Years of Subsequent Interviews
Initial HRS	1931-1941	1992	1994, 1996, 1998, 2000, 2002, 2004, 2006, 2008, 2010, 2012, 2014, 2016, 2018, 2020
AHEAD	Before 1924	1993	1995, 1998, 2000, 2002, 2004, 2006, 2008, 2010, 2012, 2014, 2016, 2018, 2020
Child of Depression (CODA)	1924-1930	1998	2000, 2002, 2004, 2006, 2008, 2010, 2012, 2014, 2016, 2018, 2020
War Baby (WB)	1942-1947	1998	2000, 2002, 2004, 2006, 2008, 2010, 2012, 2014, 2016, 2018, 2020
Early Baby Boomer (EBB)	1948-1953	2004	2006, 2008, 2010, 2012, 2014, 2016, 2018, 2020
Mid Baby Boomer (MBB)	1954-1959	2010	2012, 2014, 2016, 2018, 2020
Late Baby Boomer (LBB)	1960-1965	2016	2018, 2020

The first wave of the HRS was conducted between April 1992 and March 1993, and included the initial HRS cohort. The first AHEAD wave, which was originally part of a separate study (The Study of Assets and Health Dynamics Among the Oldest Old), was conducted between October 1993 and June 1994. The second wave of the HRS was conducted between April 1994 and December 1994. Like the RAND HRS, we treat the 1993 AHEAD sample and the 1994 HRS sample as part of the second wave of the HRS. The second AHEAD wave was conducted between November 1995 and June 1996. The third wave of the HRS was conducted between May 1996 and February 1997. Like the RAND HRS, we treat the 1995 AHEAD sample and the

1996 HRS sample as part of the third wave of the HRS. The fourth wave of the HRS was conducted between February 1998 and March 1999. It included the HRS and AHEAD cohorts and added the Children of Depression (CODA) cohort and the War Baby (WB) cohort. The fifth wave was conducted between February 2000 and January 2001. The sixth wave was conducted between April 2002 and March 2003. The fifth and sixth waves included the HRS cohort, AHEAD cohort, CODA cohort, and WB cohort. The seventh wave was conducted between March 2004 and February 2005. The seventh wave included the four previously mentioned cohorts and added the Early Baby Boomer (EBB) cohort. The eighth wave was conducted between March 2006 and February 2007. The ninth wave was conducted between February 2008 and February 2009. The eighth and ninth waves included the HRS cohort, AHEAD cohort, CODA cohort, WB cohort, and EBB cohort. The tenth wave was conducted between February 2010 and November 2011 and consisted of the five previously mentioned cohorts and added the Mid Baby Boomer (MBB) cohort. The eleventh wave was conducted between April 2012 and May 2013. The twelfth wave was conducted between March 2014 and April 2015. The eleventh and twelfth waves included individuals from the six previously mentioned cohorts. The thirteenth wave was conducted between April 2016 and April 2018 and included the six previously mentioned cohorts and added the Late Baby Boomer (LBB) cohort. The fourteenth wave was conducted between April 2018 and June 2019. The fifteenth wave was conducted between March 2020 and May 2021. The fourteenth and fifteenth waves included individuals from the seven previously mentioned cohorts.

The data include any individual interviewed at least once. This includes individuals who were age-eligible (born in eligible years) at the time of their first interview, spouses or partners who were not age-eligible at baseline, and spouses or partners who married an age-eligible respondent between survey waves.

The HRS data contain several auxiliary files. RAND releases 17 RAND Enhanced Fat Files, which contain most of the original HRS variables with household data merged to the Respondent level, one for each survey year. These data files do not include exit interviews or any restricted data. RAND also releases the RAND HRS Longitudinal data file, which combines information from the core interview data with information from the current Tracker, Region and Mobility, Master ID files, Cross-Wave Imputation of Cognitive Functioning Measures, and Cross-Wave Prospective Social Security Wealth Measures of Pre-Retirees, as well as the RAND Family data file which includes select information from the core interview data. The Harmonized HRS data file incorporates the RAND Enhanced Fat Files, the RAND HRS Longitudinal data file, the RAND Family data file, as well as select HRS data files. Please see the “HRS Version and Acknowledgment” in the Preface of this document for further information. It does not include any data which is not public release.

Documentation of the HRS methodology can be found in [An Elementary Cookbook of Data Management using HRS Data with SPSS, SAS and Stata Examples](#) (2004), [Overview of HRS Public Data Files for Cross-sectional and Longitudinal Analysis](#) (2010), or [Cohort Profile: the Health and Retirement Study \(HRS\)](#), *International Journal of Epidemiology* 43(2):576-585 (2014).

Documentation of the RAND HRS methodology can be found in [RAND HRS Longitudinal File](#)

[2020 \(V1\) Documentation](#) (2023), and documentation of the RAND HRS Family methodology can be found in [RAND HRS Family Data 2018 \(V2\) Documentation: Includes 1992-2018 \(Final Release\)](#) (2023).

## 1.1. Gateway to Global Aging Data

The Health and Retirement Study (HRS) has achieved remarkable scientific success, as demonstrated by an impressive number of users, research studies, and publications using it. Its success has generated substantial interest in collecting similar data as population aging has progressed in every region of the world.

The result has been a number of surveys designed to be comparable with the HRS: the Mexican Health & Aging Survey (MHAS), the English Longitudinal Study of Ageing (ELSA), the Survey of Health, Ageing and Retirement in Europe (SHARE), the Costa Rican Longevity and Healthy Aging Study (CRELES), the Korean Longitudinal Study of Aging (KLoSA), the Japanese Study on Aging and Retirement (JSTAR), the Irish Longitudinal Study on Ageing (TILDA), the China Health and Retirement Longitudinal Study (CHARLS), the Brazilian Longitudinal Study of Ageing (ELSI), the Northern Ireland Cohort Longitudinal Study of Ageing (NICOLA), the Chilean Social Protection Survey (SPS), the Malaysia Ageing and Retirement Survey (MARS), and the Longitudinal Aging Study in India (LASI). The overview of this family of surveys, including their research designs, samples, and key domains can be found in Lee, Phillips, and Wilkens (2019).

As these surveys were designed with harmonization as a goal, they provide remarkable opportunities for cross-country studies. The value of comparative analyses, especially the opportunities they offer for learning lessons resulting from policies adopted elsewhere, is widely recognized. Yet there are only a limited number of empirical studies exploiting such opportunities. This is partly due to the difficulty associated with learning multiple surveys and the policies and institutions of each country.

Identifying comparable questions across surveys is the first step toward cross-country analyses. The Gateway to Global Aging Data (Gateway) helps users understand and use these large-scale population surveys on health and retirement. The Gateway includes several tools to facilitate cross-national health and retirement research. It includes a digital library of survey questions for all participating surveys. Its search engine enables users to find relevant survey questions. The Gateway also includes a concordance with information comparing measures within and across surveys over time. Using these tools, researchers can identify all questions related to particular key words or within a domain. The Gateway also includes population and sub-population estimates for key harmonized variables and present them in graphs and tables that can be downloaded.

The Gateway can be accessed at <https://g2aging.org/>. For more information about using the Gateway visit the Help page. For more information about obtaining the Harmonized HRS from the HRS website or downloading the Stata file used to create the Harmonized HRS using the Gateway see “Chapter 4. Distribution and Technical Notes.”

## 1.2. Unit of Observation

We distinguish between three units of observation: individual, couple, and household. A "couple" in this sense means "single individual, or individual with his/her spouse, whatever applicable". In the HRS, an age-eligible individual is sampled and then this individual and their spouse or partner are interviewed, but no other household members, even if they are age-eligible. Thus, in the HRS, there is usually no distinction between a "couple" and a "household". More precisely, "household" variables in the HRS (and the RAND HRS) are actually "couple" variables. We do not include non-respondents in our files.

## 1.3. Data File Structure

The Harmonized HRS data are contained in a single file, which includes the first 15 waves of the HRS, in addition to the 1993 and 1995 AHEAD interviews. The data are stored in a "fat format" where each observation represents one respondent. The unit of observation is the individual. Each individual is uniquely identified by the unique identifier *hhidpn*. Households are identified by *hhid*. This file may be merged with other HRS data using *hhidpn*.

## 1.4. Variable Naming Convention

With few exceptions, variable names in the Harmonized HRS data follow a consistent pattern. The first character indicates whether the variable refers to the reference person ("R"), spouse ("S"), or the household ("H"). The second character indicates the wave to which the variable pertains: "1" to "15", or "A". The "A" indicates "all," i.e., the variable is not specific to any single wave. An example is *RABYEAR*, the birth year of the respondent. The remaining characters describe the concept that the variable captures. For example:

Variable `s15SIGHT` captures the spouse's self-rated eyesight. The name of the variable does not indicate who provided the information. For example, the spouse variables may have been reported by the spouse himself or herself, or it may have been reported by the reference person as a proxy. The HRS obtains many variables, particularly on financial and family matters, reported by a proxy.

In the text below, we may refer to variables such as `swSIGHT` for example, without specifying the wave. This reference points at the group of variables `s1SIGHT`, `s2SIGHT`, `s3SIGHT`, `s4SIGHT`,

S5SIGHT, S6SIGHT, S7SIGHT, S8SIGHT, S9SIGHT, S10SIGHT, S11SIGHT, S12SIGHT, S13SIGHT, S14SIGHT, S15SIGHT.

Variable labels also follow a consistent pattern. The first characters denote the name of the variable, followed by a colon. Then the wave to which the variable pertains (w1, w2, w3, w4, w5, w6, w7, w8, w9, w10, w11, w12, w13, w14 OR w15) follows. The remainder of the label describes the concept that the variable captures. For example, the variable label of s15SIGHT is:

S15SIGHT:W15 S SELF-RATED EYESIGHT

It may seem duplicative to include the name of the variable and the wave in the variable label. However, statistical packages often suppress the variable name and instead use its label in the presentation of results.

## 1.5. Missing Values, and Nonresponse

Variables may contain missing values for several reasons. Stata, SAS, and SPSS offer the capability to distinguish multiple types of missing values, and we have attempted to record as much information as possible. Generally, the codes adhere to the classification in Table 1.

**Table 1. Missing Codes**

Code	Reason for missing
.	Reference person did not respond to this wave
.a	Age ineligible
.d	Don't know
.r	Refused
.k	No kids
.n	Not applicable
.x	Does not apply
.q	Data not available because question was not asked
.u	Reference person is not married (for spouse variables)
.v	Spouse did not respond this wave (for spouse variables)
.s	Information not available due to skip patterns
.m	Other missing

The coding scheme varies across variables. Consult the Data Codebook for details on individual variables.

## 1.6. Weighting and Accounting for Survey Design

The Harmonized HRS does not include weighting variables for the main questionnaire, rather the Harmonized HRS is meant to supplement the RAND HRS or the raw HRS data files.

Therefore, in order to produce weighted estimates that correct for the complex survey design, users should use the weights provided by the RAND HRS or the HRS. For further information on the weights accounting for the survey's design, please see, [Health and Retirement Study, 2020 Tracker, Early, Version 3.0, April 2023: Data Description and Usage](#) (2023), or [RAND HRS Longitudinal File 2020 \(V1\) Documentation](#) (2023).

The Harmonized HRS does include weighting variables for the leave-behind (also called self-completion) questionnaire and for the health assessments, both beginning in Wave 7. Please see the Tracker documentation mentioned in the above paragraph for more information.

## 1.7. Availability of Physical Measures

The Harmonized HRS provides harmonized physical measure variables beginning in 2004, HRS Wave 7. The HRS administered a set of 5 physical measures in 2004, which was only given to a random subsample of approximately 3,300 respondents. While all members of this sample were given the breathing and hand strength tests, smaller subsamples were given varying combinations of the walking test, and height and weight measurements.

Beginning in 2006, a random one-half of the sample was pre-selected to complete an enhanced face-to-face interview, including the performance of the physical measures and collection of the biomarker measurements. This sample was selected at a household-level, and the request for these measures were made to the respondent and to their partner or spouse if applicable. Respondents who were selected for the enhanced face-to-face interview but who resided in a nursing home, were interviewed by proxy, or declined a face-to-face interview in place of a telephone interview were not asked to complete the physical measures or biomarkers. For those selected for an enhanced face-to-face interview, a consent form was administered by the interviewer. As a result of this sampling strategy, those not selected for an enhanced face-to-face interview, those residing in a nursing home, those interviewed by proxy, those who selected a phone interview, and those who refused to consent were not asked to complete the physical measures and biomarker measurements, and are assigned a special missing .s for these variables.

Those who did consent to this portion of the interview were asked to perform the following standardized physical measures: lung function, grip strength, balance tests, and walking speed. Additionally, the following biomarker measurements were taken: blood pressure, height, weight, and waist circumference. These measurements were completed in the following order: blood pressure, lung function, handgrip strength, balance tests, timed walk, height, weight, and waist circumference. Starting in 2016, a hearing test was added and was completed between the blood pressure and lung function measurements. If the respondent attempted a measure but failed to complete it, then a special missing .x is assigned for that measure. If the respondent did not attempt the measure due to safety concerns in the performance of the test, then a special missing .n is assigned for that measure.

For more information about the physical measures and biomarker measurements collected by the HRS, please see [HRS Documentation Report: Documentation of Physical Measures, Anthropometrics and Blood Pressure in the Health and Retirement Study](#) (2008).

Due to the COVID-19 Pandemic, physical measures were not able to be collected in Wave 15.

## 1.8. Availability of Stress Measures

In 2015, Drs. Elissa Epel and Wendy Mendes partnered with the Gateway to Global Aging Data team to form the Stress Measurement Network funded by the National Institute on Aging (NIA/NIH R24 AG048024). The goal of the Stress Network is to promote better theory and measurement of psychosocial stress in population-based studies. One of the specific aims is to facilitate the use of stress measures in population based studies, which was led by Drs. Tara Gruenewald, Alexandra Crosswell, and Jinkook Lee. It is hoped that identification of such measures will facilitate examination of the association of stressor conditions with cognitive-affective and physiological distress experience and poor psychological and physical health states hypothesized to follow from stressor exposure.

As a result of the work of the NIA Stress Measurement Network, the Harmonized HRS provides harmonized stress measures beginning in 1992, HRS Wave 1, and through 2018, HRS Wave 14. Select stress measures are added at Waves 3, 4 and 7, however, the majority of stress measures are available between HRS Waves 8 and 11, and many are discontinued starting in Wave 12. The vast majority of the stress measures are collected in the psychosocial leave-behind questionnaire, which was piloted in 2004, HRS Wave 7, and which began to collect data on a variety of psychosocial variables every 4 years in conjunction with the enhanced face-to-face interview in 2006, HRS Wave 8. As a result of this sampling strategy, those not selected for a face-to-face interview and those who did not return the psychosocial leave-behind questionnaire are assigned a special missing .c for the applicable variables. A small number of measures are collected in the core interview or in the 2015 and 2017 life history mail surveys, which contain questions about residential history, education history, and other important childhood and family events.

HRS queried the lifetime occurrence of negative life events and traumas through event checklists, which included a subset of items that assessed experiences in childhood/adolescence (i.e., before the age of 18) and information on discrete events that can be categorized as major life stressors or traumatic events (e.g., death of a family member, loss of a job). HRS included an assessment of the experience of ongoing burdens or strains and the degree of upset experienced in relation to each for eight life domains (health, health of spouse or child, drug/alcohol problem in family member, work, finances, housing, close relationships, and caregiving). HRS included 14 measures of job strain/stress derived from the Karasek demand-control measure of job strain. HRS included measures of the frequency of discrimination experience in everyday life, as well as lifetime experience of discriminatory

events (e.g., being unfairly denied a promotion or dismissed from a job, being unfairly denied a loan, being harassed or abused by police). Respondents were also asked to indicate the identities (e.g., age, sex, race/ethnicity, religion, sexual orientation) upon which they believe the everyday discrimination was based. HRS included 7 measures of social strain and relationship support quality. Common indicators of social strain include assessments of social relationship targets as critical, irritating, and unreliable. HRS included up to 11 measures of loneliness. HRS included 9 measures of environmental/neighborhood disorder, chaos, danger, and/or lack of cohesion.

For more specific information about all stress measures included in the HRS, as well as comparable stress measures in HRS sister studies, please refer to the [Measures of Stress in the Health and Retirement Study \(HRS\) and the HRS Family of Studies \(2018\) User Guide](#).

## 2. Structure of Codebook

The Data Codebook contains the codebook documenting all variables in the Harmonized HRS Data. This section explains how to interpret the codebook entries. The figure below shows a typical codebook page; the numbers in circles correspond to comments below.

Vision and Eye Treatments ←				1
Wave	Variable	Label		Type
01	R1SIGHT	r1sight:w1 r	self-rated eyesight	Categ
02	R2SIGHT	r2sight:w2 r	self-rated eyesight	Categ
03	R3SIGHT	r3sight:w3 r	self-rated eyesight	Categ
04	R4SIGHT	r4sight:w4 r	self-rated eyesight	Categ

6.blind		27	19	28		

## 7 → How Constructed

RwSIGHT indicates the respondent's self-rated eyesight while wearing glasses or corrective lenses as usual. RwSIGHT is coded as follows: 1.excellent, 2.very good, 3.good, 4.fair, 5.poor, 6.blind. Please note that blind is not a specified option, but rather a voluntary response from the respondent. In Waves 14 and 15, however, blindness is not recorded as a possible value for these variables. Don't know, refused, or other missing responses of RwSIGHT are assigned special missing codes .d, .r, and .m, respectively. Other responses to RwSIGHT are assigned special missing code .o. In Wave 2, proxy respondents are not asked about vision, so RwSIGHT is assigned special missing .p. RwSIGHT is set to plain missing (.) for respondents who did not participate in the current wave.

SwSIGHT indicates the self-rated eyesight of the respondent's current wave's spouse, and is taken from RwSIGHT. In addition to the special missing codes employed by RwSIGHT, SwSIGHT employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## 8 → Cross-Wave Differences in HRS

In Wave 2, proxy respondents are not asked about vision, so RwSIGHT is assigned special missing .p.

In Waves 14 and 15, blindness is not coded as an option for the HRS variables that serve as the basis for RwSIGHT.

## 9 → HRS Variables Used

Wave 1:	
V450	b32:sight w/ glasses:imp
Wave 2:	
W448	b37.rate eyesight
Wave 2a:

Wave 15:	
RC095	rate eyesight

- 
- 1 **Title:** The variables are documented in groups according to the concept that they measure. For example, there are 30 variables related to self-rated eyesight, corresponding to fourteen waves and respondent/spouse. The title is often followed by a short description of the concept that is captured.
  - 2 **Variable Names:** This entry shows the waves of variables in the group. Please note that not all waves may be present for all variables.
  - 3 **Variable Labels:** This entry shows the Stata variable labels. As discussed above, the labels typically include the name of the variable, the file on which it is present, and a description of its contents.
  - 4 **Variable Type:** This entry indicates the type of variable. It may be continuous (Cont), categorical (Categ), or character (Char).
  - 5 **Descriptive Statistics:** This entry shows descriptive statistics on each variable. They include the number of nonmissing values, the mean, standard deviation, minimum value, and maximum value.
  - 6 **Categorical Value Codes:** This entry shows the value label codes. These are only relevant for categorical variables. The first character(s) of the value labels indicate the value to which each label has been assigned. For example, value "1" is mapped into "1. Excellent" (not just "Excellent"). The entry also indicates which labels are assigned to which variables, and shows frequency tabulations for all categorical variables.
  - 7 **How Constructed:** This entry provides background on the manner in which variables were constructed.
  - 8 **Cross-Wave Differences in HRS:** This entry briefly describes differences in question wording or contents between interview waves.
  - 9 **HRS Variables Used:** This entry provides the names and labels of raw HRS

---

variables that were used to construct the new variables.

### 3. Distribution and Technical Notes

The Harmonized HRS Data file is distributed through the Health and Retirement Survey (HRS) website along with the original HRS data and the RAND HRS data. The Harmonized HRS data file is made available free of charge but only to users who register with the HRS and agree to the standard conditions. For more information on obtaining access to the HRS data, visit:

<https://hrs.isr.umich.edu/data-products>.

The Harmonized HRS data file is distributed in Stata, SAS, and SPSS dataset formats.

This is version **D** of the Harmonized HRS Data.

A copy of this Harmonized HRS Codebook and Stata creation code program can be obtained on the Gateway to Global Aging Data under the Download tab (<https://g2aging.org/downloads>).

DOI: <https://doi.org/10.25549/4smz-hp46>

## 4. Data Codebook

## **Section A: Demographics**

<b>Person Specific Identifier</b>
-----------------------------------

Wave	Variable	Label	Type
AA	HHIDPN	hhidpn: hhold id + person number /num	Cont
AA	HHID	hhid: hhold id / 6-char	Char
AA	PN	person number (char)	Char

**Descriptive Statistics**

Variable	N	Mean	Std Dev	Minimum	Maximum
HHIDPN	42406	289694105.88	251921223.27	1010.00	959738010.00

**How Constructed:**

Person specific identifier, household identifier and person number are based on the RAND HRS Longitudinal File 2020 v.1 dataset.

HHIDPN is the numeric version of the combined household and person identifier that identifies every single respondent.

HHID is the 6-character HRS household identifier.

PN is the 3-character person number.

For more detailed information about how these variables are created, please refer to RAND HRS Data files webpage: <https://www.rand.org/well-being/social-and-behavioral-policy/centers/aging/dataproduct/hrs-data.html>, or "RAND HRS Longitudinal File 2020 (V1) Documentation" (2023).

**Cross Wave Differences in HRS**

No differences known.

**HRS Variables Used:**

RAND HRS:	
HHID	hhid: hhold id / 6-char
HHIDPN	hhidpn: hhold id + person number /num
PN	person number (char)

INW13PM	20912	0.40	0.49	0.00	1.00
INW14PM	17146	0.42	0.49	0.00	1.00

### Categorical Variable Codes

Value-----	INW7PM	INW8PM	INW9PM	INW10PM
0.no	16683	10675	10286	13035
1.yes	3446	7794	6931	8999

Value-----	INW11PM	INW12PM	INW13PM	INW14PM
0.no	12043	10795	12625	9936
1.yes	8511	7952	8287	7210

### How Constructed:

INWwPM indicates whether the respondent was eligible for and chose to participate in the physical measures module. INWwPM is coded as 0 if the respondent was not selected for a face-to-face interview, was not selected for an enhanced face-to-face interview, refused to participate in the physical measures module, or was living in a nursing home. INWwPM is coded as 1 if the respondent was not living in a nursing home, was selected for a face-to-face interview, was selected for an enhanced face-to-face interview, and agreed to participate in the physical measures module. INWwPM is set to plain missing (.) for respondents who did not participate in the current wave.

### Cross Wave Differences in HRS

Physical measurements and tests were conducted starting in Wave 7. The sample in Wave 7 and the number of tests is smaller than the samples and number of tests in the following waves.

As a result of the COVID-19 pandemic, physical measures were not conducted in Wave 15.

### HRS Variables Used:

Wave 7:	
JA009	proxy/self interview
JA028	r in nursing home

### How Constructed:

INWwSC indicates whether the respondent was eligible for and completed the self-completion questionnaire, also known as the leave behind questionnaire. INWwSC is coded as 0 if the respondent was not eligible for a self-completion questionnaire, either because they were not selected for a face-to-face interview or they were selected for an enhanced face-to-face interview but completed the interview by phone, or they did not complete the self-completion questionnaire. INWwSC is coded as 1 if the respondent was eligible for the self-completion questionnaire because they completed an enhanced face-to-face interview as a self-respondent, with a proxy, or in a nursing home, and they completed the questionnaire and either returned it by mail, completed it by phone with an interviewer, or it was completed by proxy. INWwSC is set to plain missing (.) for respondents who did not participate in the current wave.

### Cross Wave Differences in HRS

Self-completion, also called leave behind, questionnaires were distributed starting in Wave 7. The sample in Wave 7 is smaller than the samples in the following waves.

### How Constructed:

RwNWTRESP is the person-level weight for those who participated in the physical measures module of the given wave. RwNWTRESP is taken from the physical measures weight provided in the HRS Tracker file. It is assigned a special missing value .m for those who did not participate in the physical measures module of the given wave. RwNWTRESP is assigned plain missing (.) if the respondent did not participate in the current wave.

RwSCWTRESP is the person-level weight for those who participated in the leave behind questionnaire of the given wave. RwSCWTRESP is taken from the weight provided in the HRS Tracker file. In Waves 7 and 9, it is described as the weight for the psychosocial sample, while in Waves 8 and 10 and onward, it is described as the weight for the leave behind sample. It is assigned a special missing value .m for those who did not participate in the leave behind questionnaire of the given wave. RwSCWTRESP is assigned plain missing (.) if the respondent did not participate in the current wave.

### Cross Wave Differences in HRS

Physical measurements and tests were conducted starting in Wave 7. The sample in Wave 7 and the number of tests is smaller than the samples and number of tests in the following waves.

Self-completion, also called leave behind, questionnaires were distributed starting in Wave 7. The sample in Wave 7 is smaller than the samples in the following waves. In Waves 7 and 9, the weight in the Tracker file is specifically named for the psychosocial sample, while those in Waves 8 and 10 and onward are named for the leave behind sample.

### How Constructed:

RwSCPROXY indicates whether the self-completion questionnaire was completed by proxy. RwSCPROXY is coded as 1 if the self-completion questionnaire was completed by proxy, and is coded as 0 if the self-completion questionnaire was completed by the respondent and returned by mail, or if it was completed with the help of an interviewer by phone. RwSCPROXY is coded as special missing .s if the self-completion questionnaire was not completed, or if the respondent was not eligible for the self-completion questionnaire. RwSCPROXY is coded as special missing .m if the response is otherwise missing. RwSCPROXY is set to plain missing (.) for respondents who did not participate in the current wave.

SwSCPROXY indicates whether the respondent's current wave's spouse's self-completion questionnaire was completed by proxy, and its values are taken from RwSCPROXY. In addition to the special missing codes employed by RwSCPROXY, SwSCPROXY employs two additional special missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

### Cross Wave Differences in HRS

While the self-completion questionnaires were distributed starting in Wave 7, there is no indicator of whether the questionnaire was completed by the respondent or a proxy. Whether the self-completion questionnaire was completed by a proxy is tracked beginning in Wave 8.

3.web				909	1283

## How Constructed:

RwIWMODE indicates the mode of the interview. RwIWMODE is assigned a code of 1 if the interview occurred face-to-face, a code of 2 if the interview occurred over the telephone, and a code of 3 if the interview occurred over the web. In the HRS sample in Wave 2, RwIWMODE is assigned a code of 4 if the interview occurred both face-to-face and over the telephone. These variables are based on information released in the HRS Tracker file. If this information is not available, then RwIWMODE is assigned special missing .m. The HRS sample in Wave 2 has a much higher percentage of respondents with missing information for this variable. RwIWMODE is set to plain missing (.) for respondents who did not participate in the current wave.

SwIWMODE indicates the mode of the current wave's spouse's interview, and is taken from the spouse's values to RwIWMODE. In addition to the special missing codes used in RwIWMODE, SwIWMODE employs two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

The HRS sample in Wave 2 includes the option that the respondent's interview occurred both face-to-face and over the telephone. There is a much higher percentage of respondents with missing information for this variable than in any other waves.

The web becomes an additional mode of interview starting in Wave 14.

## How Constructed:

RwLANG\_H indicates the language that the interview was conducted in. RwLANG\_H is coded as 1 if the interview was conducted in English, and is coded as 2 if the interview was conducted in Spanish. These variables are based on information released in the HRS Tracker file. In HRS Wave 2, the language of interview was not ascertained for a small portion of the sample, in which case RwLANG\_H is assigned special missing .m. RwLANG\_H is set to plain missing (.) for respondents who did not respond to the current wave.

SwLANG\_H indicates the language that the current wave's spouse's interview was conducted in, and its values are taken from RwLANG\_H. In addition to the special missings used in RwLANG\_H, SwLANG\_H employs two additional special missing values, .u and .v. If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of .v is used.

## Cross Wave Differences in HRS

In HRS Wave 2, the language of interview was not ascertained for a small portion of the sample, in which case RwLANG\_H is assigned special missing .m.

### How Constructed:

RAEDUCL identifies the level of education completed according to a three-tier harmonized scale which we developed to compare education levels across countries. This Harmonized education scale is a simplified version of 1997 International Standard Classification of Education (ISCED-97) codes. For more information on ISCED codes, see [www.uis.unesco.org](http://www.uis.unesco.org) and the OECD document entitled "Classifying Educational Programmes: Manual for ISCED-97 Implementation in OECD Countries, 1999 Edition". RAEDUCL is coded as follows: 1.Less than upper secondary education, 2.Upper secondary & vocational training, and 3.Tertiary education. The values for RAEDUCL are assigned based on the RAND HRS variable, RAEDUC. The RAEDUC value of 1.less than high school is assigned a value of 1 in RAEDUCL, for less than upper secondary education. The RAEDUC values of 2.GED, 3.High-school graduate, or 4.some college are assigned a value of 2 in RAEDUCL, for upper secondary and vocational training. The RAEDUC value of 5.college and above is assigned a value of 3 in RAEDUCL, for tertiary education. Please see RAEDUC in the RAND HRS for additional information on the creation of RAEDUC. RAEDUCL is set to plain missing (.) for respondents who did not respond to any wave.

SwEDUCL indicates the current wave's spouse's category of education. They are taken from the spouse's value to RAEDUCL. If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of .v is used. SwEDUCL is set to plain missing (.) for respondents who did not respond to this waves.

### Cross Wave Differences in HRS

No differences known.

## How Constructed:

RwMARSLW indicates whether the respondent is newly married since the last interview. RwMARSLW is coded as 1 if the respondent reports being newly married, when directly asked if a marriage began after the previous interview, or if the respondent's marital status (RwMSTATH) changed from separated, divorced, widowed, never married, or unknown in the previous wave to married in the current wave. RwMARSLW is coded as 0 if the respondent did not directly report being newly married, if the respondent's marital status did not change, or if the respondent's marital status changed but did not change from being unmarried to married.

RwDIVSLW indicates whether the respondent became divorced or separated since the last interview. RwDIVSLW is coded as 1 if the respondent reports being newly divorced, when directly asked if they divorced or became widowed, or if the respondent's marital status (RwMSTATH) changed from married in the previous wave to divorced or separated in the current wave. RwDIVSLW is coded as 0 if the respondent did not directly report becoming divorced or separated, if the respondent's marital status did not change, or if the respondent's marital status changed but did not change from being married to divorced or separated.

Don't know, refused, or other missing responses for RwMARSLW and RwDIVSLW are assigned special missing codes .d, .r, .m, respectively. Special missing .b is assigned if the respondent is a new respondent in the current wave. Special missing .c is assigned if the respondent has been previously interviewed but was not interviewed in the previous wave. Special missing .i is assigned if the respondent has an unknown unmarried status in the current wave. Respondents in the AHEAD 1 sample were not previously interviewed,

so RwmARSLW and RwdIVSLW cannot be calculated and are assigned special missing .q in Wave 2. RwmARSLW and RwdIVSLW are set to plain missing (.) for respondents who did not respond to the current wave.

SwMARSLW and SwDIVSLW indicate whether the respondent's current wave's spouse became married or divorced since the last interview, respectively. Their values are taken from RwmARSLW and RwdIVSLW. In addition to the special missing codes used in RwmARSLW and RwdIVSLW, SwMARSLW and SwDIVSLW employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

RwmARSLW and RwdIVSLW are available starting in Wave 2. Please note that RwmSTATH in the RAND HRS assigns values of 4.separated and 5.divorced for all HRS sample respondents, and assigns a value of 6.separated/divorced for AHEAD respondents.

### How Constructed:

RwMCRTYR is the respondent's year of marriage to their current spouse. RwMCRTYR is derived by calculating the difference between the respondent's interview end year (RwIWENDY) and the reported current length of marriage (RwMCURLN). Don't know, refused, or other missing responses of RwMCRTYR are assigned special missing codes .d, .r, .m, respectively. RwMCRTYR is assigned special missing .u if the respondent is currently unmarried. RwMCRTYR is set to plain missing (.) for respondents who did not respond to the current wave.

SwMCRTYR is the current wave's spouse's year of marriage, and is taken from the spouse's values to RwMCRTYR. In addition to the special missing codes used in RwMCRTYR, SwMCRTYR employs two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

### How Constructed:

RAMFSTYR is the year of the respondent's first marriage. Respondents are directly asked the year their first marriage began, and RAMFSTYR takes the first reported non-missing value. Don't know, refused, or other missing responses of RAMFSTYR are assigned special missing codes .d, .r, .m, respectively. If the respondent reports that they have never been married, RAMFSTYR is assigned special missing .n. Special missing .s is assigned if the respondent did not indicate how many times they had been married in the AHEAD sample in Wave 2. Starting in Wave 4, respondents who live in a nursing home are not asked this question and are assigned special missing .h. RAMFSTYR is set to plain missing (.) for respondents who did not respond to any wave.

SwMFSTYR is the year of the respondent's current wave spouse's first marriage, and is taken from the respondent's values to RAMFSTYR. In addition to the special missing codes used in RAMFSTYR, SwMFSTYR employs two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Respondents in the AHEAD sample in Wave 2 are not directly asked the year of the respondent's first marriage. Therefore, if the respondent indicates they have only been married once, then we take the value of the reported year of current marriage as the year of the respondent's first marriage, and assign special missing .s if the respondent did not report their number of marriages.

Starting in Wave 4, respondents who live in a nursing home are not asked this question and are assigned special missing .h.

## How Constructed:

RwHOMETYP indicates the type of home that the respondent mainly resides in. A code of 1 indicates that the respondent lives in a mobile home. A code of 2 indicates that the respondent lives in a one family house. A code of 3 indicates that the respondent lives in a two family house/duplex. A code of 4 indicates that the respondent lives in an apartment, a condo, a townhouse or a 3 to 4 family house. A code of 5 indicates that the respondent lives in a senior/retirement community. A code of 6 indicates that the respondent lives in a nursing home. A code of 7 indicates that the respondent lives in another kind of property that has not been mentioned in the list. Don't know, refused, or other missing responses for RwHOMETYP are assigned special missing codes .d, .r, .m, respectively. In Wave 1, if the respondent lives on a ranch or farm, RwHOMETYP is assigned special missing .s, which is carried forward in following waves if the respondent reports not moving. RwHOMETYP is set to plain missing (.) for respondents who did not respond to the current wave.

SwHOMETYP indicates the type of property that the current wave's spouse mainly resides in, and is taken from the spouse's values to RwHOMETYP. In addition to the special missing codes used in RwHOMETYP, SwHOMETYP employs two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwFARM indicates whether the respondent is living on a farm or ranch. A code of 1 indicates that the respondent lives on a farm or ranch. A code of 0 indicates that respondent does not live on a farm or ranch. Don't know, refused, or other missing responses for RwFARM are assigned special missing codes .d, .r, .m, respectively. In Wave 2, respondents who report living in senior housing or who belong to a housing association are not asked this question and are assigned special missing .s, which is carried forward in future waves if the respondent does not report moving. Starting in Wave 3, special missing .h is assigned if the respondent is not asked this question because they are living in a nursing home. RwFARM is set to plain missing (.) for respondents who did not respond to the current wave.

SwFARM indicates whether the current wave's spouse lives on a farm or ranch, and is taken from the spouse's values to RwFARM. In addition to the special missing codes used in RwFARM, SwFARM employs two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

In Wave 1, the structure type of the respondent's main residence is observed by the interviewer and living on a ranch or farm is one of the options. Starting in Wave 2, the type of property is asked to the respondent in the housing module and living on a ranch or farm is not one of the options, instead living on a ranch or farm is asked as a separate question. In Wave 1, if the respondent lives on a ranch or farm, RwHOMETYP is assigned special missing .s, which is carried forward in following waves if the respondent reports not moving. In Wave 2, respondents who report living in senior housing or who belong to a housing association are not asked RwFARM and are assigned special missing .s, which is carried forward in future waves if the respondent does not report moving. Starting in Wave 3, special missing .h is assigned to RwFARM if the respondent is not asked this question because they are living in a nursing home.

Please note that in Waves 3, 6, 7, and 8 respondents do not have the option of selecting that they live in a senior housing/retirement center, or assisted living.

### How Constructed:

HwRURAL indicates whether the respondent's household lives in an urban or rural area. HwRURAL is coded as 0 if the respondent lives in an urban area. HwRURAL is coded as 1 if the respondent lives in a rural area. The data used to derive these variables is taken from the Census Region/Division and Mobility File. This file includes designations based on Beale Rural Urban codes by wave using 1993, 2003, and 2013 coding. We employed 1993 coding for the years 1992-2002, 2003 coding for the years 2004-2012, and 2013 coding for the years 2014-2021. We consider those with urban and suburban codes in the Census file to live in an urban area, and those with ex-urban codes in the Census file to live in a rural area. HwRURAL is coded as .n if there is no match for the Beale Rural Urban code. HwRURAL is set to plain missing (.) for respondents who did not participate in the current wave.

## Cross Wave Differences in HRS

No differences known.

### How Constructed:

RwMOVESLW indicates whether the respondent moved to their current main residence since the last interview. A code of 1 is assigned if the respondent moved to the current main residence since the last interview. A code of 0 is assigned if the respondent did not move since the last interview. Don't know, refused, or other missing responses of RwMOVESLW are assigned special missing codes .d, .r, .m, respectively. Special missing .b is assigned if the respondent is a new respondent in the current wave. Special missing .c is assigned if the respondent has been previously interviewed but was not interviewed in the previous wave. Respondents in the AHEAD 1 sample were not asked about moving from their main residence, so they are assigned special missing .q in Wave 2. In the HRS sample in Wave 3, a programming error resulted in this question not being asked to a small sample of respondents, so special missing .s

is assigned. RwMOVESLW is set to plain missing (.) for respondents who did not respond to the current wave.

SwMOVESLW indicates whether the current wave's spouse moved to their current main residence since the last interview, and is taken from the spouse's values to RwMOVESLW. In addition to the special missing codes used in RwMOVESLW, SwMOVESLW employs two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

RwMOVESLW is available starting in Wave 2. This question is not asked in the AHEAD 1 questionnaire, so these respondents are assigned special missing .q in Wave 2. In the HRS sample in Wave 3, a programming error resulted in this question not being asked to a small sample of respondents, so special missing .s is assigned.

### How Constructed:

RAARRIAGE indicates the age that the respondent first started living in the United States. RAARRIAGE is taken from the age that the respondent reported arriving in the US. If the age the respondent arrived in the US is not reported but the year arrived or number of years since arrival is reported, RAARRIAGE is derived by subtracting the year from the respondent's birth year, or by subtracting the number of years ago the respondent arrived from the respondent's age at interview. RAARRIAGE takes the first reported non-missing value. Don't know, refused, or other missing responses of RAARRIAGE are assigned special missing codes .d, .r, .m, respectively. Special missing .b is assigned if the respondent was born in the United States. Special missing .i is assigned if the calculation provided a negative value or if the age was greater than the respondent's current age. RAARRIAGE is set to plain missing (.) for respondents who did not respond to any wave.

SwARRIAGE indicates the age that the current wave's spouse first started living in the United States, and is taken from the spouse's values to RAARRIAGE. In addition to the special missing codes used in RAARRIAGE, SwARRIAGE employs two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RACITIZEN indicates whether the respondent was a citizen of the United States when they were asked in the HRS survey. This question was added to the HRS in Wave 8 and was asked once per respondent to every person not born in the United States since Wave 8. A code of 1 is assigned if the respondent was born in the United States or reported that they were a citizen of the United States. A code of 0 is assigned if the respondent is not a US citizen. RACITIZEN is assigned special missing .b if the respondent was only interviewed in Waves 1 through 7, was born outside of the country, and was not asked about their citizenship. Don't know, refused, or other missing responses of RACITIZEN are assigned special missing codes .d, .r, .m, respectively.

RAFCITIZEN is a flag variable indicating the wave in which the respondent answered the questions about their citizenship. In Waves 1 through 7, new respondents are only asked if they were born in the United States. In these waves, those who were born in the United States are assigned the wave in which they answered the question for RAFCITIZEN. Those who were not born in the United States are assigned special missing .b to indicate they were born out of the country and not asked about their citizenship. Starting in Wave 8, new respondents are asked if they were born in the United States, and if not, whether or not they are a citizen of the United States. In these waves, RAFCITIZEN is assigned the wave in which they answered these questions. Don't know, refused, or other missing responses of RAFCITIZEN are assigned special missing codes .d, .r, .m, respectively.

SwCITIZEN and SwFCITIZEN indicate whether the current wave's spouse is a citizen of the United States and a flag indicating the wave in which they provided the answer, and are taken from the spouse's values to RACITIZEN and RAFCITIZEN. In addition to the special missing codes used in RACITIZEN and RAFCITIZEN,

SwCITIZEN and SwFCITIZEN employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed. SwCITIZEN and SwFCITIZEN are set to plain missing (.) for respondents who did not participate in the current wave.

## Cross Wave Differences in HRS

For RAARRIAGE, the respondents can only report the year they came to the United States in the first wave. Starting in Wave 2, the respondents have the option to report the age they came to the United States, the year they came to the US, or how many years ago they came to the US. Starting in Wave 4, HRS changed the question wording from "In about what year did you come to the United States?" to "In about what year did you first come to live in the United States?"

In all waves, respondents new to the sample are asked if they were born in the United States. Starting in Wave 8, those who were not born in the United States are asked about their citizenship status. These questions are only asked once to each respondent.

### How Constructed:

RwEMAIL indicates whether the respondent uses the World Wide Web, or Internet, for sending and receiving email or for any other purpose, such as making purchases, searching for information, or making travel reservations. A code of 1 indicates that the respondent does use the internet. If the respondent does not use the internet, a code of 0 is assigned. Don't know, refused, or other missing responses of RwEMAIL are assigned special missing codes .d, .r, .m, respectively. Special missing .p is assigned in Waves 6 through 8 if the respondent is not asked this question because the interview was by proxy. RwEMAIL is set to plain missing (.) for respondents who did not respond to the current wave.

SwEMAIL indicates whether the current wave's spouse uses the World Wide Web, or Internet, for sending and receiving email or for any other purpose, and is taken from the spouse's values to RwEMAIL. In addition to the special missing codes used in RwEMAIL, SwEMAIL employs two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A

special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Questions about internet or email use were added in Wave 6. This question was not asked to proxy respondents in Waves 6, 7, and 8, but starting in Wave 9 it was asked to proxy and non-proxy respondents.

## How Constructed:

RwSIGHT indicates the respondent's self-rated eyesight while wearing glasses or corrective lenses as usual. Starting in Wave 3, respondents are asked to rate their distance vision and near vision while wearing glasses or corrective lenses as usual, these responses are coded in RwDSIGHT and RwNSIGHT, respectively. RwSIGHT, RwDSIGHT, and RwNSIGHT are coded as follows: 1.excellent, 2.very good, 3.good, 4.fair, 5.poor, 6.blind. Please note that blind is not a specified option, but rather a voluntary response from the respondent. If the respondent reports blindness for self-rated eyesight in RwSIGHT, then RwDSIGHT and RwNSIGHT are coded for blindness as well. In Waves 14 and 15, however, blindness is not recorded as a possible value for these three variables. Don't know, refused, or other missing responses of RwSIGHT, RwDSIGHT, and RwNSIGHT are assigned special missing codes .d, .r, and .m, respectively. Other responses to RwSIGHT, RwDSIGHT, and RwNSIGHT are assigned special missing code .o. RwSIGHT, RwDSIGHT, and RwNSIGHT are set to plain missing (.) for respondents who did not participate in the current wave.

SwSIGHT, SwDSIGHT, and SwNSIGHT indicate the self-rated eyesight, distance vision, and near vision of the respondent's current wave's spouse, and are taken from RwSIGHT, RwDSIGHT, and RwNSIGHT. In addition to the special missing codes employed by RwSIGHT, RwDSIGHT, and RwNSIGHT, SwSIGHT, SwDSIGHT, and SwNSIGHT employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwCATRCT indicates whether the respondent reported having cataract surgery this wave. RwCATRCTE indicates whether the respondent has ever reported having cataract surgery. RwCATRCT and RwCATRCTE are available starting in Wave 2. RwCATRCT and RwCATRCTE are coded as 0.no, and 1.yes. Starting in Wave 13, respondents

who reported having cataract surgery on one eye in a previous interview are asked whether they have had cataract surgery on the other eye since the previous interview, the answers to which are used to code RWCATRCT, while RWCATRCTE remains coded as a 1 regardless. Starting in Wave 4, respondents who are younger than age 65 are not asked about cataract surgery and are assigned a special missing code .a. Starting in Wave 4, respondents who reported having cataract surgery on both eyes in a previous wave are not asked about cataract surgery this wave and RWCATRCT is assigned a special missing code .b. Starting in Wave 13, respondents who report having cataract surgery in both eyes before their last interview in the current wave are also assigned special missing code .b. Don't know, refused, or other missing responses of RWCATRCT and RWCATRCTE are assigned special missing codes .d, .r, and .m, respectively. Respondents in the AHEAD cohort in Wave 2 are not asked this question and are assigned special missing code .q in Wave 2. Respondents in the HRS cohort in Wave 3 are not asked this question and are assigned special missing code .q in Wave 3. RWCATRCT and RWCATRCTE are set to plain missing (.) for respondents who did not participate in the current wave.

SwCATRCT and SwCATRCTE indicate whether the respondent's current wave's spouse reported this wave or has ever had cataract surgery, and are taken from RWCATRCT and RWCATRCTE. In addition to the special missing codes employed by RWCATRCT and RWCATRCTE, SwCATRCT and SwCATRCTE employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwNCATRCT indicates the number of eyes the respondent has had cataract surgery on in the current wave. RwNCATRCT is available starting in Wave 3. RwNCATRCT is coded as follows: 1.one eye only, 2.both eyes. Starting in Wave 13, respondents who reported having cataract surgery on one eye in a previous interview are asked whether they have had cataract surgery on the other eyesince the previous interview, and if the answer is yes, then RwNCATRCT is coded as 1. RwNCATRCT is coded as .x if the respondent has not reported any cataract surgery. Starting in Wave 4, respondents who are younger than age 65 are not asked about cataract surgery and are assigned special missing .a. Starting in Wave 4, respondents who reported having cataract surgery on both eyes in a previous wave are not asked about cataract surgery and RwNCATRCT is assigned a special missing code .b. Starting in Wave 13, respondents who report having cataract surgery in both eyes before their last interview in the current wave are also assigned special missing code .b. Don't know, refused, or other missing responses of RwNCATRCT are assigned special missing codes .d, .r, and .m, respectively. Respondents in the HRS cohort in Wave 3 are not asked this question and are assigned special missing code .q in Wave 3. RwNCATRCT is set to plain missing (.) for respondents who did not participate in the current wave.

SwNCATRCT indicates the number of eyes the respondent's current wave's spouse has had cataract surgery on, and is taken from RwNCATRCT. In addition to the special missing codes employed by RwNCATRCT, SwNCATRCT employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwGLAUCOMA indicates whether the respondent has ever been treated for glaucoma. RwGLAUCOMA is coded as 1 if the respondent has ever been treated for glaucoma, and is coded as 0 if the respondent has never been treated for glaucoma. RwGLAUCOMA is available starting in Wave 3. Respondents who are younger than age 65 are not asked about being treated for glaucoma and are assigned a special missing code .a. In Wave 3, respondents in the HRS cohort are not asked this question and are assigned special missing code .q. Don't know, refused, or other missing responses of RwGLAUCOMA are assigned special missing codes .d, .r, and .m, respectively. RwGLAUCOMA is set to plain missing (.) for respondents who did not participate in the current wave.

SwGLAUCOMA indicates whether the respondent's current wave's spouse has ever been treated for glaucoma, and is taken from RwGLAUCOMA. In addition to the special missing codes employed by RwGLAUCOMA, SwGLAUCOMA employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Questions about distance and near vision are asked starting in Wave 3.

In Wave 2, respondents are asked if they have ever had cataract surgery. Respondents in the AHEAD cohort in Wave 2 and in the HRS cohort in Wave 3 are not asked about cataract surgery. In the AHEAD cohort in

Wave 3 and starting in Wave 4, respondents are either asked if they have ever had cataract surgery or if they have had cataract surgery since the previous interview. If they have had cataract surgery, they are asked whether it was on both eyes or just one. Starting in Wave 4, respondents who reported having cataract surgery on both eyes in a previous wave are no longer asked about cataracts in future waves. Also starting in Wave 4, respondents who are younger than age 65 are not asked about cataract surgery. Starting in Wave 13, respondents who have reported cataract surgery on only one eye in a previous wave are asked whether they have had cataract surgery in the other eye since the previous wave, while respondents who have never reported cataract surgery are continued to ask the same questions that started in Wave 3. Starting in Wave 13, respondents who reported cataract surgery on only one eye in a previous wave can voluntarily report that they had cataract surgery in both eyes before their last interview.

Respondents in HRS Waves 1 through 3 and in the AHEAD cohort in Wave 2 are not asked about treatment for glaucoma. Questions about treatment for glaucoma are asked in the AHEAD cohort in Wave 3 and starting in Wave 4.

In Waves 14 and 15, blindness is not coded as an option for the HRS variables that serve as the basis for RwSIGHT, RwDSIGHT, and RwnSIGHT.

### HRS Variables Used:

Wave 1:	
V450	b32:sight w/ glasses:imp
Wave 2 AHEAD:	
B288	b15a. rate corrected eyesight
B289	b15b. cataract surgery ever
Wave 2 HRS:	
W448	b37.rate eyesight
WN_INHH	hrs w2: # in hhold (r1/r2 only)
Wave 3 AHEAD:	
D900	b16. rate eyesight
D901	b16a. rate distal vision
D902	b16b. rate near vision
D903	b16c.cataract
D904	b16d. cataract surgery-2
D906	b16f. glaucoma
Wave 3 HRS:	
E900	b16. rate eyesight
E901	b16a. rate distal vision
E902	b16b. rate near vision
E903	b16c.cataract
EN_INHH	hrs w3: # r's responding in hhold
Wave 4:	
F1228	b16. rate eyesight
F1229	b16a. rate distal vision
F1230	b16b. rate near vision
F1231	b16c.cataract
F1232	b16d. cataract surgery-2
F1234	b16f. glaucoma
Wave 5:	
G1361	b16. rate eyesight
G1362	b16a. rate distal vision
G1363	b16b. rate near vision
G1364	b16c.cataract
G1365	b16d. cataract surgery-2
G1367	b16f. glaucoma
Wave 6:	
HC095	rate eyesight
HC096	rate distal vision
HC097	rate near vision
HC098	cataract surgery
HC099	cataract surgery on one or both eyes
HC101	glaucoma
Wave 7:	

JC095 rate eyesight  
JC096 rate distal vision  
JC097 rate near vision  
JC098 cataract surgery  
JC099 cataract surgery on one or both eyes  
JC101 glaucoma

Wave 8:  
KC095 rate eyesight  
KC096 rate distal vision  
KC097 rate near vision  
KC098 cataract surgery  
KC099 cataract surgery on one or both eyes  
KC101 glaucoma

Wave 9:  
LC095 rate eyesight  
LC096 rate distal vision  
LC097 rate near vision  
LC098 cataract surgery  
LC099 cataract surgery on one or both eyes  
LC101 glaucoma

Wave 10:  
MC095 rate eyesight  
MC096 rate distal vision  
MC097 rate near vision  
MC098 cataract surgery  
MC099 cataract surgery on one or both eyes  
MC101 glaucoma

Wave 11:  
NC095 rate eyesight  
NC096 rate distal vision  
NC097 rate near vision  
NC098 cataract surgery  
NC099 cataract surgery on one or both eyes  
NC101 glaucoma

Wave 12:  
OC095 rate eyesight  
OC096 rate distal vision  
OC097 rate near vision  
OC098 cataract surgery  
OC099 cataract surgery on one or both eyes  
OC101 glaucoma

Wave 13:  
PC095 rate eyesight  
PC096 rate distal vision  
PC097 rate near vision  
PC098 cataract surgery  
PC099 cataract surgery on one or both eyes  
PC101 glaucoma  
PC284 had cataract surgery in other eye

Wave 14:  
QC095 rate eyesight  
QC096 rate distal vision  
QC097 rate near vision  
QC098 cataract surgery  
QC099 cataract surgery on one or both eyes  
QC101 glaucoma  
QC284 had cataract surgery in other eye

Wave 15:  
RC095 rate eyesight  
RC096 rate distal vision  
RC097 rate near vision  
RC098 cataract surgery  
RC099 cataract surgery on one or both eyes

RC101            glaucoma  
RC284            had cataract surgery in other eye

### How Constructed:

RwHEARING indicates the respondent's self-rated hearing. RwHEARING is coded as follows: 1.excellent, 2.very good, 3.good, 4.fair, 5.poor. RwHEARING is taken from a single question asking the respondent to rate their hearing while wearing a hearing aid or as usual. Don't know, refused, or other missing responses of RwHEARING are assigned special missing codes .d, .r, and .m, respectively. Other responses to RwHEARING are assigned special missing code .o. RwHEARING is set to plain missing (.) for respondents who did not participate in the current wave.

SwHEARING indicates the self-rated hearing of the respondent's current wave's spouse, and is taken from RwHEARING. In addition to the special missing codes employed by RwHEARING, SwHEARING employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwHEARAID indicates whether the respondent ever wears a hearing aid. RwHEARAID is coded as follows: 0.no, 1.yes. If the respondent reports wearing a hearing aid, this answer is carried forward in future waves. Don't know, refused, or other missing responses of RwHEARAID are assigned special missing codes .d, .r, and .m, respectively. RwHEARAID is set to plain missing (.) for respondents who did not participate in the current wave.

SwHEARAID indicates whether the respondent's current wave's spouse ever wears a hearing aid, and is taken from RwHEARAID. In addition to the special missing codes employed by RwHEARAID, SwHEARAID employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Respondents can only report "other" in the AHEAD cohort in Wave 3, so special missing .o is only available this wave.

## HRS Variables Used:

Wave 1:		
	V451	b33:hearing aid :imp
	V453	b34:w/ aid, rate hea:imp
Wave 2 AHEAD:		
	B290	b16. hearing aid

### How Constructed:

RwFALL1Y indicates whether the respondent has fallen down in the last year, and is only available for the AHEAD cohort in Wave 2. RwFALL indicates whether the respondent has fallen down in the last 2 years, and is available starting in Wave 3. RwFALL1Y and RwFALL are coded as 0.no, and 1.yes. In Wave 2, respondents who were part of the HRS cohort were not asked this question and are assigned a special missing .q for RwFALL1Y in Wave 2. In Wave 3, respondents younger than age 68 are not asked about falling and are assigned special missing .a. Starting in Wave 4, respondents younger than age 65 are not asked about falling and are assigned special missing .a. Don't know, refused, or other missing responses of RwFALL1Y and RwFALL are assigned special missing codes .d, .r, and .m, respectively. RwFALL1Y and RwFALL are set to plain missing (.) for respondents who did not participate in the current wave.

SwFALL1Y and SwFALL indicate whether the respondent's current wave's spouse has fallen in the appropriate time period, and are taken from RwFALL1Y and RwFALL. In addition to the special missing codes employed by RwFALL1Y and RwFALL, SwFALL1Y and SwFALL employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwFALLINJ1Y indicates whether the respondent has ever been injured seriously enough from a fall to need medical treatment in the last year, and is only available for the AHEAD cohort in Wave 2. RwFALLINJ

indicates whether the respondent has ever been injured seriously enough from a fall to need medical treatment in the last 2 years, and is available starting in Wave 3. RwfALLINJ1Y and RwfALLINJ are coded as 0.no and 1.yes. RwfALLINJ1Y and RwfALLINJ are assigned special missing .x if the respondent did not experience a fall in the previous year or two years, depending on the wave. In Wave 2, respondents who were part of the HRS cohort were not asked this question and RwfALLINJ1Y is assigned a special missing .q in Wave 2. In Wave 3, respondents younger than age 68 are not asked about falling and RwfALLINJ is assigned special missing .a. Starting in Wave 4, respondents younger than age 65 are not asked about falling and RwfALLINJ is assigned special missing .a. Don't know, refused, or other missing responses of RwfALLINJ1Y and RwfALLINJ are assigned special missing codes .d, .r, and .m, respectively. RwfALLINJ1Y and RwfALLINJ are set to plain missing (.) for respondents who did not participate in the current wave.

SwfALLINJ1Y and SwfALLINJ indicate whether the respondent's current wave's spouse has injured themselves in a fall, and are taken from RwfALLINJ1Y and RwfALLINJ. In addition to the special missing codes employed by RwfALLINJ1Y and RwfALLINJ, SwfALLINJ1Y and SwfALLINJ employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwfALLNUM indicates the number of times the respondent has fallen in the last 2 years, and is available starting in Wave 3. RwfALLNUM is assigned a 0 if the respondent did not experience a fall in the previous two years. In Wave 3, respondents younger than age 68 are not asked about falling and are assigned special missing .a. Starting in Wave 4, respondents younger than age 65 are not asked about falling and are assigned special missing .a. In the AHEAD cohort in Wave 3, respondents can respond with "other" when asked about the number of falls, in which case RwfALLNUM is assigned special missing .o. Don't know, refused, or other missing responses of RwfALLNUM are assigned special missing codes .d, .r, and .m, respectively. RwfALLNUM is set to plain missing (.) for respondents who did not participate in the current wave.

SwfALLNUM indicates the number of times the respondent's current wave's spouse has fallen in the last 2 years, and is taken from RwfALLNUM. In addition to the special missing codes employed by RwfALLNUM, SwfALLNUM employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwHIPE indicates whether the respondent has ever had a broken hip. RwHIPE is coded as 0.no and 1.yes. In the AHEAD cohort in Wave 2, respondents of all ages are asked about a broken hip. In Wave 3, respondents younger than age 68 are not asked about a broken hip and are assigned special missing .a. Starting in Wave 4, respondents younger than age 65 are not asked about a broken hip and are assigned special missing .a. Respondents part of the HRS cohort in Wave 2 are not asked this question, and so are assigned special missing .q. Don't know, refused, or other missing responses of RwHIPE are assigned special missing codes .d, .r, and .m, respectively. RwHIPE is set to plain missing (.) for respondents who did not participate in the current wave.

SwHIPE indicates whether the respondent's current wave's spouse has ever had a broken hip, and is taken from RwHIPE. In addition to the special missing codes employed by RwHIPE, SwHIPE employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Questions about falls begin in the AHEAD cohort in Wave 2. RwfALL1Y and RwfALLINJ1Y are only available for the AHEAD cohort in Wave 2 when the question about falling uses a time period of one year. In Wave 2, respondents who were part of the HRS cohort were not asked this question and are assigned a special missing .q in Wave 2.

Questions about injuries from falling in the last two years are available starting in Wave 3.

Questions about the number of falls also begin in Wave 3, and so RwfALLNUM is available starting in Wave 3. The number of falls the respondent is allowed to report varies between waves. For the AHEAD cohort in Wave 3, the respondent can report up to 100 falls, though over 20 falls are considered an extreme value by the HRS. The AHEAD cohort in Wave 3 is also the only time the respondent can respond with "other" rather than the number of falls. For the HRS cohort in Wave 3, the respondent can report up to 50 falls,

though over 20 falls are considered an extreme values by the HRS. In Waves 4 and 5, the respondent can report up to 20 falls, while starting in Wave 6, the respondent can report up to 50 falls.

In Wave 3, respondents younger than age 68 are not asked about falling, so RwfALL, RwfALLINJ, and RwfALLNUM are assigned special missing .a. Starting in Wave 4, respondents younger than age 65 are not asked about falling and these variables are assigned special missing .a.

Questions about breaking a hip begin in the AHEAD cohort in Wave 2 and for both cohorts in Wave 3, and so RwhIPE is available starting in Wave 2. In Wave 2, respondents who were part of the HRS cohort were not asked this question and are assigned a special missing .q in Wave 2. For the AHEAD cohort in Wave 2, respondents of all ages are asked about a broken hip. In Wave 3, respondents younger than age 68 are not asked about a broken hip and are assigned special missing .a. Starting in Wave 4, respondents younger than age 65 are not asked about a broken hip and are assigned special missing .a.

## How Constructed:

RwURINAI indicates whether the respondent has experienced any urinary incontinence in the past 12 months. RwURINAI is available starting in the AHEAD cohort in Wave 2. RwURINAI is coded as 0.no, and 1.yes. In Wave 2, respondents who were part of the HRS cohort were not asked this question and are assigned a special missing .q in Wave 2. Don't know, refused, or other missing responses of RwURINAI are assigned special missing codes .d, .r, and .m, respectively. RwURINAI is set to plain missing (.) for respondents who did not participate in the current wave.

SwURINAI indicates whether the respondent's current wave's spouse has experienced any incontinence, and is taken from RwURINAI. In addition to the special missing codes employed by RwURINAI, SwURINAI employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwURINAF indicates the number of days the respondent experienced urinary incontinence in the last month. RwURINAF is available starting in the AHEAD cohort in Wave 2. RwURINAF takes values from 0 to 31, with 31 indicating the presence of urinary incontinence every day. If the respondent does not experience any urinary incontinence, RwURINAF is set to 0. Other responses to RwURINAF, including Catheter, Diaper, Pessary, or depends, are assigned special missing code .o. In Wave 2, respondents who were part of the HRS cohort were not asked this question and are assigned a special missing .q in Wave 2. Don't know, refused, or other missing responses of RwURINAF are assigned special missing codes .d, .r, and .m, respectively. RwURINAF is set to plain missing (.) for respondents who did not participate in the current wave.

SwURINAF indicates the number of days the respondent's current wave's spouse experienced incontinence, and is taken from RwURINAF. In addition to the special missing codes employed by RwURINAF, SwURINAF employs two additional special missing codes. A special missing value .u is used when the respondent does

not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwURINPAD indicates whether the respondent ever uses any absorbent products such as pads, special garments, sanitary napkins, or toilet paper for urinary incontinence. RwURINPAD is available in the AHEAD cohort in Wave 2 and Waves 3 through 6. RwURINPAD is coded as 0.no, and 1.yes. If the respondent does not experience any urinary incontinence, RwURINPAD is set to .x. In Wave 2, respondents who were part of the HRS cohort were not asked this question and are assigned a special missing .q in Wave 2. Don't know, refused, or other missing responses of RwURINPAD are assigned special missing codes .d, .r, and .m, respectively. RwURINPAD is set to plain missing (.) for respondents who did not participate in the current wave.

SwURINPAD indicates whether the respondent's current wave's spouse ever uses absorbent products for incontinence, and is taken from RwURINPAD. In addition to the special missing codes employed by RwURINPAD, SwURINPAD employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwURINAMT indicates how much urine the respondent usually leaks. RwURINAMT is coded as follows: 1.a few drops, 2.a small amount, 3.a large amount. RwURINAMT is available in Waves 6 through 11. If the respondent does not experience any urinary incontinence, RwURINAMT is set to .x. Don't know, refused, or other missing responses of RwURINAMT are assigned special missing codes .d, .r, and .m, respectively. RwURINAMT is set to plain missing (.) for respondents who did not participate in the current wave.

SwURINAMT indicates how much urine the respondent's current wave's spouse usually leaks, and is taken from RwURINAMT. In addition to the special missing codes employed by RwURINAMT, SwURINAMT employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwURINCGH indicates how frequently the respondent leaks urine during activities like coughing, sneezing, lifting or exercise. RwURINURG indicates how frequently the respondent leaks urine with an urge to urinate and could not get to the bathroom fast enough. RwURINCGH and RwURINURG are coded as follows: 1.most of the time, 2.some of the time, 3.rarely or never. RwURINCGH and RwURINURG are available in Waves 6 through 11. If the respondent does not experience any urinary incontinence, these variables are set to .x. Don't know, refused, or other missing responses of these variables are assigned special missing codes .d, .r, and .m, respectively. RwURINCGH and RwURINURG are set to plain missing (.) for respondents who did not participate in the current wave.

SwURINCGH and SwURINURG indicate how frequently the respondent's current wave's spouse leaks urine when coughing or with an urge to go, and is taken from RwURINCGH and RwURINURG. In addition to the special missing codes employed by RwURINCGH and RwURINURG, SwURINCGH and SwURINURG employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Questions about urinary incontinence, the frequency of urinary incontinence, and using absorbent products begin in the AHEAD cohort in Wave 2, and so RwURINAI, RwURINAF, and RwURINPAD are available starting in Wave 2. These questions are not asked to those in the HRS cohort in Wave 2, so special missing code .q is only applicable in Wave 2 for these variables and these respondents.

Starting in Wave 7, questions about using absorbent products are no longer asked and so RwURINPAD is no longer available.

Questions about the amount of urine leakage, leaking urine when coughing, or leaking urine with an urge to urinate are asked in Waves 6 through 11 only, and so RwURINAMT, RwURINCGH, and RwURINURG are available starting in Wave 6, and no longer available starting in Wave 12.

## HRS Variables Used:

Wave 2 AHEAD:

### How Constructed:

RwNOTEETH indicates whether the respondent has lost all of their teeth. RwNOTEETH is available starting in Wave 8. RwNOTEETH is coded as 0.no, and 1.yes. Yes responses are carried forward to future waves. While new respondents are always asked this question, re-interview respondents are only asked this question every third wave, so re-interview respondents were not asked this question in Waves 9 and 10 or 12 and 13 or 15 but were asked this question in Wave 11 and in Wave 14. Respondents who were skipped because they were re-interview respondents during a non-asking wave are assigned special missing .s. Don't know, refused, or other missing responses of RwNOTEETH are assigned special missing codes .d, .r, and .m, respectively. RwNOTEETH is set to plain missing (.) for respondents who did not participate in the current wave.

SwNOTEETH indicates whether the respondent's current wave's spouse has lost all of their teeth, and is taken from RwNOTEETH. In addition to the special missing codes employed by RwNOTEETH, SwNOTEETH employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

### Cross Wave Differences in HRS

The question about not having teeth begins in Wave 8 and so RwNOTEETH is available starting in Wave 8. New respondents are always asked this question but re-interview respondents are only asked this question every third wave, so re-interview respondents were not asked this question in Waves 9 and 10 or 12 and 13 or 15 but were asked this question in Wave 11 and in Wave 14.

## How Constructed:

RwFALLSLP, RwWAKENT, RwWAKEUP, and RwRESTED indicate the frequency with which the respondent experiences sleep issues. RwFALLSLP indicates how often the respondent has trouble falling asleep. RwWAKENT indicates how often the respondent wakes up during the night. RwWAKEUP indicates how often the respondent wakes up too early and is unable to go back to sleep. RwRESTED indicates how often the respondent feels rested when they wake up. These variables are coded as 1.most of the time, 2.sometimes, 3.rarely or never. These variables are asked starting in Wave 6. In Waves 9 and 11, only new respondents are asked RwFALLSLP, RwWAKENT, and RwWAKEUP, as such, returning respondents are assigned special missing .s in these waves. RwRESTED is asked to all respondents in all waves. Don't know, refused, or other missing responses of these variables are assigned special missing codes .d, .r, and .m, respectively. These variables are set to plain missing (.) for respondents who did not participate in the current wave.

SwFALLSLP, SwWAKENT, SwWAKEUP, and SwRESTED indicate the frequency with which the respondent's current wave's spouse has experienced sleep issues, and are taken from RwFALLSLP, RwWAKENT, RwWAKEUP, and RwRESTED. In addition to the special missing codes employed by RwFALLSLP, RwWAKENT, RwWAKEUP, and RwRESTED, SwFALLSLP, SwWAKENT, SwWAKEUP, and SwRESTED employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwRXSLP indicates whether the respondent takes medication to help them sleep, and is available starting in Wave 8. RwRXSLP is coded as 1.yes, 0.no. Respondents are asked if they regularly take prescription medication, and if they do regularly take prescription medication, they are asked if they regularly take medication to help them sleep. Those who report not regularly taking prescription medication are assigned a value of 0. Additionally, in Waves 8 through 12, respondents are asked several questions about their sleep, the last of which asks if they have taken any medications or used other treatments to help them sleep in the past 2 weeks. Respondents are considered to take medication to help them sleep if they answer positively to either question. Don't know, refused, or other missing responses of RwRXSLP are assigned special missing codes .d, .r, and .m, respectively. RwRXSLP is set to plain missing (.) for respondents who did not participate in the current wave.

SwRXSLP indicates whether the respondent's current wave's spouse takes medication to help them sleep, and is taken from RwRXSLP. In addition to the special missing codes employed by RwRXSLP, SwRXSLP employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Questions about sleep difficulties begin in Wave 6, and so RwFALLSLP, RwWAKENT, RwWAKEUP, and RwRESTED are available starting in Wave 6. In Waves 9 and 11, only new respondents are asked about difficulty falling asleep, waking up during the night, and waking up too early, as such, returning respondents are assigned special missing .s to RwFALLSLP, RwWAKENT, and RwWAKEUP in these waves. The question about waking up rested is asked to all respondents in all waves starting in Wave 6.

Questions about whether the respondent takes medication to help them sleep begin in Wave 8, and so RwRXSLP is available starting in Wave 8. In Waves 8 through 12, respondents are asked several questions about their sleep, the last of which asks if they have taken any medications or used other treatments to help them sleep in the past 2 weeks. The answer to this question supplements the question about regularly taking prescription medication to help them sleep which starts in Wave 8.

## HRS Variables Used:

Wave 6:	
HC083	trouble falling asleep
HC084	trouble waking up during night
HC085	trouble waking up too early
HC086	feel rested in morning
Wave 7:	
JC083	trouble falling asleep
JC084	trouble waking up during night

JC085 trouble waking up too early  
JC086 feel rested in morning

Wave 8:  
KC083 trouble falling asleep  
KC084 trouble waking up during night  
KC085 trouble waking up too early  
KC086 feel rested in morning  
KC232U2 medications to sleep  
KN175 take rx drugs regularly  
KN364 presc drugs regularly help sleep

Wave 9:  
LC083 trouble falling asleep  
LC084 trouble waking up during night  
LC085 trouble waking up too early  
LC086 feel rested in morning  
LC232U2 medications to sleep  
LN175 take rx drugs regularly  
LN364 presc drugs regularly help sleep  
LZ076 r ever interviewed

Wave 10:  
MC083 trouble falling asleep  
MC084 trouble waking up during night  
MC085 trouble waking up too early  
MC086 feel rested in morning  
MC232U2 medications to sleep  
MN175 take rx drugs regularly  
MN364 presc drugs regularly help sleep

Wave 11:  
NC083 trouble falling asleep  
NC084 trouble waking up during night  
NC085 trouble waking up too early  
NC086 feel rested in morning  
NC232U2 medications to sleep  
NN175 take rx drugs regularly  
NN364 presc drugs regularly help sleep  
NZ076 r ever interviewed

Wave 12:  
OC083 trouble falling asleep  
OC084 trouble waking up during night  
OC085 trouble waking up too early  
OC086 feel rested in morning  
OC232U2 medications to sleep  
ON175 take rx drugs regularly  
ON364 presc drugs regularly help sleep

Wave 13:  
PC083 trouble falling asleep  
PC084 trouble waking up during night  
PC085 trouble waking up too early  
PC086 feel rested in morning  
PN175 take rx drugs regularly  
PN364 presc drugs regularly help sleep

Wave 14:  
QC083 trouble falling asleep  
QC084 trouble waking up during night  
QC085 trouble waking up too early  
QC086 feel rested in morning  
QN175 take rx drugs regularly  
QN364 presc drugs regularly help sleep

Wave 15:  
RC083 trouble falling asleep  
RC084 trouble waking up during night  
RC085 trouble waking up too early  
RC086 feel rested in morning

RN175            take rx drugs regularly  
RN364            presc drugs regularly help sleep

### How Constructed:

RwPAINFR indicates whether the respondent experiences frequent pain. RwPAINFR is coded as 0.no, and 1.yes. Don't know, refused, or other missing responses of RwPAINFR are assigned special missing codes .d, .r, and .m, respectively. RwPAINFR is set to plain missing (.) for respondents who did not participate in the current wave.

RwPAINLV indicates the respondent's usual level of pain. RwPAINLV is coded as 0.none, 1.mild, 2.moderate, 3.severe. If the respondent does not experience frequent pain, then RwPAINLV is assigned a value of 0. In Waves 1 and 3, respondents who report that their worst pain is mild are not asked this question and are assigned a value of 1. AHEAD respondents in Wave 2 are not asked this question and are assigned special missing .q in Wave 2. Don't know, refused, or other missing responses of RwPAINLV are assigned special

missing codes .d, .r, and .m, respectively. RWPAINLV is set to plain missing (.) for respondents who did not participate in the current wave.

In Waves 1 and 2, RWPAINW indicates whether the respondent's pain interferes with normal work. Starting in Wave 2, RWPAINA indicates whether the respondent's pain interferes with normal activities. RWPAINW and RWPAINA are coded as 0.no, and 1.yes. If the respondent does not experience frequent pain, then RWPAINW and RWPAINA are assigned special missing .x. AHEAD respondents in Wave 2 are not asked if pain interferes with normal work and RWPAINW is assigned special missing .q in Wave 2. HRS respondents in Wave 2 are not asked if pain interferes with normal activities and RWPAINA is assigned special missing .q in Wave 2. Don't know, refused, or other missing responses of these variables are assigned special missing codes .d, .r, and .m, respectively. These variables are set to plain missing (.) for respondents who did not participate in the current wave.

SwPAINFR, SwPAINLV, SwPAINW, and SwPAINA indicate the respondent's current wave's spouse's experience with pain, and are taken from RWPAINFR, RWPAINLV, RWPAINW, and RWPAINA. In addition to the special missing codes employed by RWPAINFR, RWPAINLV, RWPAINW, and RWPAINA, SwPAINFR, SwPAINLV, SwPAINW, and SwPAINA employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwRXPAIN indicates whether the respondent takes medication for pain in their joints or muscles, and is available starting in Wave 8. RwRXPAIN is coded as 1.yes, 0.no. Starting in Wave 8, respondents are asked if they regularly take prescription medication, and if they do regularly take prescription medication, they are asked if they regularly take medication for pain in their joints or muscles. Those who report not regularly taking prescription medication are assigned a value of 0. Starting in Wave 13 as part of the questions on their experience with pain, respondents are asked whether they have taken any opioid pain medications in the past three months. Respondents are considered to take medication to help with pain if they answer positively to either of these questions. Don't know, refused, or other missing responses of RwRXPAIN are assigned special missing codes .d, .r, and .m, respectively. RWPAIN is set to plain missing (.) for respondents who did not participate in the current wave.

SwRXPAIN indicates whether the respondent's current wave's spouse takes medication for pain, and is taken from RwRXPAIN. In addition to the special missing codes employed by RwRXPAIN, SwRXPAIN employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Respondents in Wave 1 and Wave 3 who report that their worst pain is mild are not asked about their usual level of pain and RWPAINLV is assigned a value of 1.

The question about how the respondent's pain interferes with normal work is only asked in Wave 1 and for the HRS cohort in Wave 2, and so RWPAINW is only available in Waves 1 and 2. In the AHEAD cohort in Wave 2 and starting in Wave 3, the respondent is asked how pain interferes with normal activities, and RWPAINA is available.

AHEAD respondents in Wave 2 are not asked about usual pain levels, or how pain interferes with normal work, and so RWPAINLV and RWPAINW are assigned special missing .q in Wave 2. HRS respondents in Wave 2 are not asked about how pain interferes with normal activities, and so RWPAINA is assigned special missing .q in Wave 2.

Questions about whether the respondent takes medication for pain begin in Wave 8, and so RwRXPAIN is available starting in Wave 8. Starting in Wave 13, as part of the questions on their experience with pain, respondents are asked whether they have taken any opioid pain medications in the past three months. Respondents are considered to take medication to help with pain if they answer positively to either of the questions this wave.

## HRS Variables Used:

Wave 1:

## How Constructed:

RwHYSTERE indicates whether the respondent has ever had a hysterectomy. RwHYSTERE is available starting in Wave 9. RwHYSTERE is coded as 0.no, and 1.yes. Yes responses are carried forward to future waves. Respondents who are men are assigned special missing .g. Proxy respondents are not asked about a hysterectomy and are assigned special missing .p. Starting in Wave 10 and continuing in the even numbered waves, previously interviewed respondents are not asked this question and are assigned special missing .s. Don't know, refused, or other missing responses of RwHYSTERE are assigned special missing codes .d, .r, and .m, respectively. RwHYSTERE is set to plain missing (.) for respondents who did not participate in the current wave.

SwHYSTERE indicates whether the respondent's current wave's spouse has ever had a hysterectomy, and is taken from RwHYSTERE. In addition to the special missing codes employed by RwHYSTERE, SwHYSTERE employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwMENOPE indicates what stage of menopause respondents who are women believe they are in. RwMENOPE is available starting in Wave 9. RwMENOPE is coded as 1.without a sign, 2.just beginning, 3.in the middle, 4.near the end, 5.all through. All through responses are carried forward to future waves. RwMENOPE is assigned special missing .g if the respondent is not a woman and .h if the respondent reported having a hysterectomy. Respondents older than age 55 are not asked this question and are assigned special missing code .a. Proxy respondents are not asked about what stage of menopause and are assigned special missing .p. Starting in Wave 12 for even-numbered waves, respondents who had been previously interviewed were not asked this question and are assigned special missing .s. Don't know, refused, or other missing responses of RwMENOPE are assigned special missing codes .d, .r, and .m, respectively. RwMENOPE is set to plain missing (.) for respondents who did not participate in the current wave.

SwMENOPE indicates what stage the respondent's current wave's spouse has reached in menopause, and is taken from RwMENOPE. In addition to the special missing codes employed by RwMENOPE, SwMENOPE employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwLSTMNSPD indicates the respondent's age at their last menstrual period. Respondents who are women are asked how old they were when they stopped menstruating, and if they answer don't know or refuse, are then asked a series of questions to determine a bracket in which the true age lies within. RwLSTMNSPD takes the value reported by the respondent if available. In Waves 11 and 13, respondents can also report the year in which they stopped menstruating, and the age the respondent stopped menstruating is calculated using their birth year. RwLSTMNSPD takes the following values as a result of the bracketed questions, with the result of the brackets in parentheses: 45 (about 45), 47.5 (older than 45 and younger than 50), 50 (about 50), 52.5 (older than 50 and younger than 55), 55 (about 55). RwFLSTMNSPD is a flag variable indicating whether the value of RwLSTMNSPD was reported, in which case RwFLSTMNSPD is assigned a value of 0, or if RwLSTMNSPD was set to a value as a result of the brackets, in which case RwFLSTMNSPD is assigned a value of 1. If the respondent reported that they were less than 45 years old, then RwLSTMNSPD and RwFLSTMNSPD are assigned special missing .y. If the respondent reported that they were older than 55 years old, then RwLSTMNSPD and RwFLSTMNSPD are assigned special missing .o. If the respondent voluntarily reports they still menstruate or if the respondent reports their stage of menopause as being without a sign, just beginning, in the middle, or near the end and this question is not asked, RwLSTMNSPD and RwFLSTMNSPD are set to special missing value .x. RwLSTMNSPD and RwFLSTMNSPD are available starting in Wave 9. Values of RwLSTMNSPD and RwFLSTMNSPD are carried forward in future waves. In RwLSTMNSPD and RwFLSTMNSPD, respondents who are men are assigned special missing .g. Respondents aged 55 and older are not asked this question and are assigned special missing .a, if we cannot carry forward a value from the previous interview. Respondents who reported having a hysterectomy are not asked this question and are assigned special missing .h. Respondents who report an age that is greater than their current age are assigned special missing .i. Proxy respondents are not asked about the age at their last menstrual period and are assigned special missing .p. Don't know, refused, or other missing responses of these variables are assigned special missing codes .d, .r, and .m, respectively. RwLSTMNSPD and RwFLSTMNSPD are set to plain missing (.) for respondents who did not participate in the current wave.

SwLSTMNSPD and SwFLSTMNSPD indicate the respondent's current wave's spouse's age at their last menstrual period and flag variable, and their values are taken from RwLSTMNSPD and RwFLSTMNSPD. In addition to the special missing codes used in RwLSTMNSPD and RwFLSTMNSPD, SwLSTMNSPD and SwFLSTMNSPD employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Please note that extreme values for age of last menstrual period have been left to the discretion of the user.

## Cross Wave Differences in HRS

Questions about a hysterectomy begin in Wave 9, and so RwhYSTERE is available starting in Wave 9. Starting in Wave 10 and continuing in the even-numbered waves, previously interviewed respondents are not asked this question and are assigned special missing .s.

Questions about menopause stage begin in Wave 9, and so RwmENOPE is available starting in Wave 9. Starting in Wave 12 and continuing in the even-numbered waves, respondents who had been previously interviewed were not asked this question and these respondents are assigned special missing .s.

Questions about age of the last menstrual period begin in Wave 9, and so RwLSTMNSPD and RwFLSTMNSPD are available starting in Wave 9. In Waves 11 and 13, respondents can also report the year in which they had their last menstrual period.

## How Constructed:

RwSWELL, RwBREATH, RwDIZZY, RwBACKP, RwHEADACHE, RwFATIGUE, and RwwHEEZE indicate whether the respondent has experienced any persistent health problems in the last 2 years. These variables are available starting in Wave 3. These variables are coded as 0.no, and 1.yes. Don't know, refused, or other missing responses of these variables are assigned special missing codes .d, .r, and .m, respectively. Starting in Wave 4 and in every even wave following, only new respondents are asked about the persistent health problems and returning respondents are assigned special missing .s. These variables are set to plain missing (.) for respondents who did not participate in the current wave.

RwSWELL indicates whether the respondent has experienced persistent swelling in their feet or ankles. RwBREATH indicates whether the respondent has experienced shortness of breath while awake. RwDIZZY indicates whether the respondent has experienced persistent dizziness or lightheadedness. RwBACKP indicates whether the respondent has experienced back pain or problems. RwHEADACHE indicates whether the respondent has experienced persistent headaches. RwFATIGUE indicates whether the respondent has experienced severe fatigue or exhaustion. RwwHEEZE indicates whether the respondent has experienced persistent wheezing, cough, or bringing up phlegm.

SwSWELL, SwBREATH, SwDIZZY, SwBACKP, SwHEADACHE, SwFATIGUE, and SwWHEEZE indicate whether the respondent's current wave's spouse has experienced any persistent health problems, and are taken from RwsWELL, RwsBREATH, RwsDIZZY, RwsBACKP, RwsHEADACHE, RwsFATIGUE, and RwsWHEEZE. In addition to the special missing codes employed by RwsWELL, RwsBREATH, RwsDIZZY, RwsBACKP, RwsHEADACHE, RwsFATIGUE, and RwsWHEEZE, SwSWELL, SwBREATH, SwDIZZY, SwBACKP, SwHEADACHE, SwFATIGUE, and SwWHEEZE employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Questions about persistent health problems begin in Wave 3, and so RwsWELL, RwsBREATH, RwsDIZZY, RwsBACKP, RwsHEADACHE, RwsFATIGUE, and RwwHEEZE are available starting in Wave 3. Starting in Wave 4 and continuing in every even-numbered wave, returning respondents are not asked about these persistent health problems and are assigned special missing .s. New respondents are asked about the persistent health problems in all available waves.

## HRS Variables Used:

### Wave 3 AHEAD:

D963	b23b.	symptoms-swelling feet
D964	b23c.	symptoms-short breath-day
D967	b23f.	symptoms-dizziness
D968	b23g.	symptoms-back pain
D969	b23h.	symptoms-headache
D972	b23m.	symptoms-severe fatigue or exhaus
D973	b23n.	symptoms-wheezing

### Wave 3 HRS:

E967	b23b.	symptoms-swelling feet
E968	b23c.	symptoms-short breath-day
E969	b23f.	symptoms-dizziness

E970 b23g. symptoms-back pain  
 E971 b23h. symptoms-headache  
 E972 b23m. symptoms-severe fatigue or exhaus  
 E973 b23n. symptoms-wheezing

## Wave 4:

F1092 alt\_wave question indicator  
 F1304 b23b. symptoms-swelling feet  
 F1305 b23c. symptoms-short breath-day  
 F1306 b23f. symptoms-dizziness  
 F1307 b23g. symptoms-back pain  
 F1308 b23h. symptoms-headache  
 F1309 b23m. symptoms-severe fatigue or exhaus  
 F1310 b23n. symptoms-wheezing  
 F682 previous wave interv

## Wave 5:

G1437 b23b.symptoms-swelling feet  
 G1438 b23c.symptoms-short breath-day  
 G1439 b23f.symptoms-dizziness  
 G1440 b23g.symptoms-back pain  
 G1441 b23h.symptoms-headache  
 G1442 b23m.symptoms-severe fatigue/exhaustion  
 G1443 b23n.symptoms-wheezing

## Wave 6:

HC143 swelling feet/ankles  
 HC144 shortness of breath  
 HC145 ever been dizzy  
 HC146 back pain or problems  
 HC147 persistent headache  
 HC148 severe fatigue  
 HC149 persistent cough/wheeze/phlegm  
 HZ076 r ever interviewed

## Wave 7:

JC143 swelling feet/ankles  
 JC144 shortness of breath  
 JC145 ever been dizzy  
 JC146 back pain or problems  
 JC147 persistent headache  
 JC148 severe fatigue  
 JC149 persistent cough/wheeze/phlegm

## Wave 8:

KC143 swelling feet/ankles  
 KC144 shortness of breath  
 KC145 ever been dizzy  
 KC146 back pain or problems  
 KC147 persistent headache  
 KC148 severe fatigue  
 KC149 persistent cough/wheeze/phlegm  
 KZ076 r ever interviewed

## Wave 9:

LC143 swelling feet/ankles  
 LC144 shortness of breath  
 LC145 ever been dizzy  
 LC146 back pain or problems  
 LC147 persistent headache  
 LC148 severe fatigue  
 LC149 persistent cough/wheeze/phlegm

## Wave 10:

MC143 swelling feet/ankles  
 MC144 shortness of breath  
 MC145 ever been dizzy  
 MC146 back pain or problems  
 MC147 persistent headache  
 MC148 severe fatigue

MC149 persistent cough/wheeze/phlegm  
MZ076 r ever interviewed

Wave 11:  
NC143 swelling feet/ankles  
NC144 shortness of breath  
NC145 ever been dizzy  
NC146 back pain or problems  
NC147 persistent headache  
NC148 severe fatigue  
NC149 persistent cough/wheeze/phlegm

Wave 12:  
OC143 swelling feet/ankles  
OC144 shortness of breath  
OC145 ever been dizzy  
OC146 back pain or problems  
OC147 persistent headache  
OC148 severe fatigue  
OC149 persistent cough/wheeze/phlegm  
OZ076 r ever interviewed

Wave 13:  
PC143 swelling feet/ankles  
PC144 shortness of breath  
PC145 ever been dizzy  
PC146 back pain or problems  
PC147 persistent headache  
PC148 severe fatigue  
PC149 persistent cough/wheeze/phlegm  
PZ076 r ever interviewed

Wave 14:  
QC143 swelling feet/ankles  
QC144 shortness of breath  
QC145 ever been dizzy  
QC146 back pain or problems  
QC147 persistent headache  
QC148 severe fatigue  
QC149 persistent cough/wheeze/phlegm  
QZ076 r ever interviewed

Wave 15:  
RC143 swelling feet/ankles  
RC144 shortness of breath  
RC145 ever been dizzy  
RC146 back pain or problems  
RC147 persistent headache  
RC148 severe fatigue  
RC149 persistent cough/wheeze/phlegm  
RZ076 r ever interviewed

## How Constructed:

RwADLFIVE is a 5-item summary of any difficulty with activities of daily living. The activities of daily living included are bathing, dressing, eating, getting in and out of bed, and using the toilet. In Wave 1, RwADLFIVE is the sum of RwBATH + RwDRESS + RweAT + RwbED + v9034 (toilet), where "1.not at all diff" is counted as 0, and "2.a little diff", "3.somewhat diff", and "4.very diff/can't do" are counted as 1. The difficulty using the toilet variable, v9034, is only asked to a subset of Wave 1 respondents. Starting in Wave 2, RwADLFIVE is the sum of RwbATHA + RwdRESSA + RweATA + RwbEDA + RwtOILTA. RwADLFIVE is calculated as long as at least one of the comprising ADL measures is not missing. RwADLFIVEM is a summary of the number of comprising variables with missing values. RwADLFIVEA indicates whether the respondent experiences difficulties with any of the five ADL activities listed above, and is assigned a 1 if the respondent experiences any difficulties and a 0 if not. Responses of "don't do" are coded as special missing .x if RwADLFIVE is not calculated. RwtOILTA is not asked in the HRS sample in Wave 2, and so these variables are coded as special missing .q if it is not calculated for this sample. Don't know, refused, skipped, or other missing responses of these variables are assigned special missing codes .d, .r, .s, and .m, respectively. RwADLFIVE, RwADLFIVEM, and RwADLFIVEA are set to plain missing (.) for respondents who did not participate in the current wave.

SwADLFIVE, SwADLFIVEM, and SwADLFIVEA indicate the respondent's current wave's spouse's 5-item ADL summary, and are taken from RwADLFIVE, RwADLFIVEM, and RwADLFIVEA. In addition to the special missing codes employed by RwADLFIVE, RwADLFIVEM, and RwADLFIVEA, SwADLFIVE, SwADLFIVEM and SwADLFIVEA employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwADLTOT6 is a 6-item summary of any difficulty with activities of daily living. The activities of daily living included are bathing, dressing, eating, getting in and out of bed, using the toilet, and walking across a room. In Wave 1, RwADLTOT6 is the sum of RwBATH + RwDRESS + RweAT + RwbED + v9034 (toilet) + RwwALKR, where "1.not at all diff" is counted as 0, and "2.a little diff", "3.somewhat diff", and "4.very diff/can't do" are counted as 1. The difficulty using the toilet variable, v9034, is only asked to a subset of Wave 1 respondents. Starting in Wave 2, RwADLTOT6 is the sum of RwbATHA + RwdRESSA + RweATA + RwbEDA + RwtOILTA + RwwALKRA. RwADLTOT6 is calculated as long as at least one of the comprising ADL measures is not missing. RwADLTOT6M is a summary of the number of comprising variables with missing values. RwADLTOT6A indicates whether the respondent experiences difficulties with any of the six ADL activities listed above, and is assigned a 1 if the respondent experiences any difficulties and a 0 if not. Responses of "don't do" are coded as special missing .x if RwADLTOT6 is not calculated. RwtOILTA is not asked in the HRS sample in Wave 2, and so these variables are coded as special missing .q if it is not calculated for this sample. Don't know, refused, skipped, or other missing responses of these variables are assigned special missing codes .d, .r, .s, and .m, respectively. RwADLTOT6, RwADLTOT6M, and RwADLTOT6A are set to plain missing (.) for respondents who did not participate in the current wave.

SwADLTOT6, SwADLTOT6M, and SwADLTOT6A indicate the respondent's current wave's spouse's 6-item ADL summary, and are taken from RwADLTOT6, RwADLTOT6M, and RwADLTOT6A. In addition to the special missing codes employed by RwADLTOT6, RwADLTOT6M, and RwADLTOT6A, SwADLTOT6, SwADLTOT6M and SwADLTOT6A employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwIADLFOUR is a 4-item summary of any difficulty with instrumental activities of daily living. The instrumental activities of daily living included are managing money, taking medications, shopping for groceries, and preparing meals. Questions about difficulty managing money, taking medications, shopping for groceries, and preparing meals were not asked in Wave 1. Starting in Wave 2, RwIADLFOUR is the sum of RwmONEYA + RwmEDSA + RwsHOPA + RwmEALSA. RwIADLFOUR is calculated as long as at least one of the comprising IADL measures is not missing. RwIADLFOURM is a summary of the number of comprising variables with missing values. RwIADLFOURA indicates whether the respondent experiences difficulties with any of

the four IADL activities listed above, and is assigned a 1 if the respondent experiences any difficulties and a 0 if not. RwsHOPA and RwsEALSA are not asked in the HRS sample in Wave 2, and so RwiADLFOUR is coded as special missing .q if it is not calculated for this sample. Responses of "don't do" are coded as special missing .x if RwiADLFOUR is not calculated. Starting in Wave 4, responses of "don't do/no if did" are coded as special missing .z if RwiADLFOUR is not calculated. Don't know, refused, skipped, or other missing responses of these variables are assigned special missing codes .d, .r, .s, and .m, respectively. RwiADLFOUR, RwiADLFOURM, and RwiADLFOURA are set to plain missing (.) for respondents who did not participate in the current wave.

SwiADLFOUR, SwiADLFOURM, and SwiADLFOURA indicate the respondent's current wave's spouse's 4-item IADL summary, and are taken from RwiADLFOUR, RwiADLFOURM, and RwiADLFOURA. In addition to the special missing codes employed by RwiADLFOUR, RwiADLFOURM, and RwiADLFOURA, SwiADLFOUR, SwiADLFOURM and SwiADLFOURA employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwiADLTOT\_H is a 6-item summary of any difficulty with instrumental activities of daily living. The instrumental activities of daily living included are managing money, taking medications, shopping for groceries, preparing meals, using a map, and using the phone. Questions about difficulty managing money, taking medications, shopping for groceries, preparing meals, and using the phone were not asked in Wave 1, so these summary variables are not created for that wave. Starting in Wave 2, RwiADLTOT\_H is the sum of RwmONEYA + RwmEDSA + RwsHOPA + RwsEALSA + RwmAPA + RwpHONEA. RwiADLTOT\_H is calculated as long as at least one of the comprising IADL measures is not missing. RwiADLTOTM\_H is a summary of the number of comprising variables with missing values. RwiADLTOTA\_H indicates whether the respondent experiences difficulties with any of the six IADL activities listed above, and is assigned a 1 if the respondent experiences any difficulties and a 0 if not. RwsHOPA and RwsEALSA are not asked in the HRS sample in Wave 2, and so these variables are coded as special missing .q if it is not calculated for this sample. RwmAPA is not asked in the AHEAD sample in Wave 2, and so these variables are coded as special missing .q if it is not calculated for this sample. Responses of "don't do" are coded as special missing .x if RwiADLTOT\_H is not calculated. Starting in Wave 4, responses of "don't do/no if did" are coded as special missing .z if RwiADLTOT\_H is not calculated. Don't know, refused, skipped, or other missing responses of these variables are assigned special missing codes .d, .r, .s, and .m, respectively. RwiADLTOT\_H, RwiADLTOTM\_H, and RwiADLTOTA\_H are set to plain missing (.) for respondents who did not participate in the current wave.

SwiADLTOT\_H, SwiADLTOTM\_H, and SwiADLTOTA\_H indicate the respondent's current wave's spouse's 6-item IADL summary, and are taken from RwiADLTOT\_H, RwiADLTOTM\_H, and RwiADLTOTA\_H. In addition to the special missing codes employed by RwiADLTOT\_H, RwiADLTOTM\_H, and RwiADLTOTA\_H, SwiADLTOT\_H, SwiADLTOTM\_H and SwiADLTOTA\_H employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwMOBILSEV is a 7-item summary of any difficulty with mobility activities. The mobility activities included are walking one block, climbing several flights of stairs, getting up from a chair, stooping or kneeling or crouching, extending arms up, lifting 10 pounds, and picking up a dime. In Wave 1, RwMOBILSEV is the sum of RwwALK1 + RwwCLIMS + RwwCHAIR + RwwSTOOP + RwwARMSA + RwwLIFT + RwwDIME, where "1.yes" and "2.can't do" are counted as 1. Starting in Wave 2, RwMOBILSEV is the sum of RwwALK1A + RwwCLIMSA + RwwCHAIRA + RwwSTOOPA + RwwARMSA + RwwLIFTA + RwwDIMEA. RwMOBILSEV is calculated as long as at least one of the comprising mobility measures is not missing. RwMOBILSEVM is a summary of the number of comprising variables with missing values. RwMOBILSEVA indicates whether the respondent experiences difficulties with any of the seven mobility activities listed above, and is assigned a 1 if the respondent experiences any difficulties and a 0 if not. Responses of "don't do" are coded as special missing .x if RwMOBILSEV is not calculated. RwwALK1A, RwwCLIMSA, RwwCHAIRA, RwwSTOOPA, and RwwARMSA are not asked in the AHEAD sample in Wave 2, and so RwMOBILSEV and RwMOBILSEVA are coded as special missing .q if they are not calculated for this sample. Don't know, refused, skipped, or other missing responses of these variables are assigned special missing codes .d, .r, .s, and .m, respectively. RwMOBILSEV, RwMOBILSEVM and RwMOBILSEVA are set to plain missing (.) for respondents who did not participate in the current wave.

SwMOBILSEV, SwMOBILSEVM, and SwMOBILSEVA indicate the respondent's current wave's spouse's 7-item mobility summary, and are taken from RwMOBILSEV, RwMOBILSEVM and RwMOBILSEVA. In addition to the special missing codes employed by RwMOBILSEV, RwMOBILSEVM, and RwMOBILSEVA, SwMOBILSEV, SwMOBILSEVM, and SwMOBILSEVA employ two additional special missing codes. A special missing value .u is used when the

respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwLOWERMOb is a 4-item summary of any difficulty with lower-body mobility activities. The lower-body mobility activities included are walking one block, climbing several flights of stairs, getting up from a chair, and stooping or kneeling or crouching. In Wave 1, RwLOWERMOb is the sum of RwWALK1 + RwCLIMS + RwCHAIR, where "1.yes" and "2.can't do" are counted as 1. Starting in Wave 2, RwLOWERMOb is the sum of RwWALK1A + RwCLIMS + RwCHAIRA + RwSTOOPA. RwLOWERMOb is calculated as long as at least one of the comprising lower-body mobility measures is not missing. RwLOWERMObM is a summary of the number of comprising variables with missing values. RwLOWERMObA indicates whether the respondent experiences difficulties with any of the four lower-body mobility activities listed above, and is assigned a 1 if the respondent experiences any difficulties and a 0 if not. Responses of "don't do" are coded as special missing .x if RwLOWERMOb is not calculated. RwWALK1A, RwCLIMS, RwCHAIRA, and RwSTOOPA are not asked in the AHEAD sample in Wave 2, and so RwLOWERMOb and RwLOWERMObA are coded as special missing .q for this sample. Don't know, refused, skipped, or other missing responses of these variables are assigned special missing codes .d, .r, .s, and .m, respectively. RwLOWERMOb, RwLOWERMObM, and RwLOWERMObA are set to plain missing (.) for respondents who did not participate in the current wave.

SwLOWERMOb, SwLOWERMObM, and SwLOWERMObA indicate the respondent's current wave's spouse's 4-item lower-body mobility summary, and are taken from RwLOWERMOb, RwLOWERMObM, and RwLOWERMObA. In addition to the special missing codes employed by RwLOWERMOb, RwLOWERMObM, and RwLOWERMObA, SwLOWERMOb, SwLOWERMObM, and SwLOWERMObA employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwUPPERMOB is a 3-item summary of any difficulty with upper-body mobility activities. The upper-body mobility activities included are extending arms up, lifting 10 pounds, and picking up a dime. In Wave 1, RwUPPERMOB is the sum of RwARMS + RwLIFT + RdDIME, where "1.yes" and "2.can't do" are counted as 1. Starting in Wave 2, RwUPPERMOB is the sum of RwARMSA + RwLIFTA + RdDIMEA. RwUPPERMOB is calculated as long as at least one of the comprising upper-body mobility measures is not missing. RwUPPERMOBM is a summary of the number of comprising variables with missing values. RwUPPERMOBA indicates whether the respondent experiences difficulties with any of the three upper-body mobility activities listed above, and is assigned a 1 if the respondent experiences any difficulties and a 0 if not. Responses of "don't do" are coded as special missing .x if RwUPPERMOB is not calculated. RwARMSA is not asked in the AHEAD sample in Wave 2, and so RwUPPERMOB and RwUPPERMOBA are coded as special missing .q if they are not calculated for this sample. Don't know, refused, skipped, or other missing responses of these variables are assigned special missing codes .d, .r, .s, and .m, respectively. RwUPPERMOB, RwUPPERMOBM, and RwUPPERMOBA are set to plain missing (.) for respondents who did not participate in the current wave.

SwUPPERMOB, SwUPPERMOBM, and SwUPPERMOBA indicate the respondent's current wave's spouse's 3-item upper-body mobility summary, and are taken from RwUPPERMOB, RwUPPERMOBM, and RwUPPERMOBA. In addition to the special missing codes employed by RwUPPERMOB, RwUPPERMOBM, and RwUPPERMOBA, SwUPPERMOB, SwUPPERMOBM, and SwUPPERMOBA employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwNAGI10 is a 10-item summary of any difficulty with mobility activities. The mobility activities included are walking one block, sitting for 2 hours, climbing several flights of stairs, getting up from a chair, climbing 1 flight of stairs, stooping or kneeling or crouching, extending arms up, pushing/pulling a large object, lifting 10 pounds, and picking up a dime. RwNAGI10 is the sum of RwWALK1A + RwSITA + RwCLIMS + RwCHAIRA + RwCLIM1A + RwSTOOPA + RwARMSA + RwpUSHA + RwLIFTA + RdDIMEA, where "1.yes" and "2.can't do" are counted as 1. RwNAGI10 is calculated for all respondents who answered at least one of the NAGI item component questions. RwNAGI10M is a summary of the number of comprising variables with missing values. RwNAGI10A indicates whether the respondent experiences difficulties with any of the ten mobility activities listed above, and is assigned a 1 if the respondent experiences any difficulties and a 0 if not. Responses of "don't do" are coded as special missing .x if RwNAGI10 is not calculated. RwWALK1A, RwCLIMS, RwCHAIRA, RwSTOOPA, and RwARMSA are not asked in the AHEAD sample in Wave 2, and so RwNAGI10 is coded as special missing .q if they are not calculated for this sample. Don't know, refused, skipped, or other missing responses of these variables are assigned special missing codes .d, .r, .s, and .m, respectively. RwNAGI10 and RwNAGI10M are set to plain missing (.) for respondents who did not participate in the current wave.

SwNAGI10 and SwNAGI10M indicate the respondent's current wave's spouse's 10-item mobility summary, and are taken from RwnAGI10 and RwnAGI10M. In addition to the special missing codes employed by RwnAGI10 and RwnAGI10M, SwNAGI10 and SwNAGI10M employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwnAGI8 is a 8-item summary of any difficulty with mobility activities. The mobility activities included are walking one block, sitting for 2 hours, getting up from a chair, stooping or kneeling or crouching, extending arms up, pushing/pulling a large object, lifting 10 pounds, and picking up a dime. RwnAGI8 is the sum of RwnWALK1A + RwnSITA + RwnCHAIRA + RwnSTOOPA + RwnARMSA + RwnPUSHA + RwnLIFTA + RwnDIMEA, where "1.yes" and "2.can't do" are counted as 1. RwnAGI8 is calculated for all respondents who answered at least one of the NAGI item component questions. RwnAGI8M is a summary of the number of comprising variables with missing values. RwnAGI8A indicates whether the respondent experiences difficulties with any of the eight mobility activities listed above, and is assigned a 1 if the respondent experiences any difficulties and a 0 if not. Responses of "don't do" are coded as special missing .x if RwnAGI8 is not calculated. RwnWALK1A, RwnCLIMSA, RwnCHAIRA, RwnSTOOPA, and RwnARMSA are not asked in the AHEAD sample in Wave 2, and so RwnAGI8 is coded as special missing .q if they are not calculated for this sample. Don't know, refused, skipped, or other missing responses of these variables are assigned special missing codes .d, .r, .s, and .m, respectively. RwnAGI8 and RwnAGI8M are set to plain missing (.) for respondents who did not participate in the current wave.

SwNAGI8 and SwNAGI8M indicate the respondent's current wave's spouse's 8-item mobility summary, and are taken from RwnAGI8 and RwnAGI8M. In addition to the special missing codes employed by RwnAGI8 and RwnAGI8M, SwNAGI8 and SwNAGI8M employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

A question about difficulty using the toilet was only asked to a small subsample of respondents in Wave 1, and to all respondents in the AHEAD sample in Wave 2, but to no respondents in the HRS sample in Wave 2. Starting in Wave 3, this question was asked to all respondents.

Questions about difficulty managing money, taking medications, and using the phone were not asked in Wave 1. Starting in Wave 2, these questions were asked to all respondents.

Questions about difficulty shopping for groceries and preparing meals were not asked in Wave 1. In Wave 2, these questions were only asked to the AHEAD sample and not to the HRS sample. Starting in Wave 3, these questions were asked to all respondents.

Questions about difficulty using a map, walking one block, getting up from a chair, stopping, and raising their arms were not asked in the AHEAD sample in Wave 2, but were asked to the HRS sample.

Please note that the "raw recode" variables in the RAND HRS are used to construct the mobility measures in Wave 1, whereas the "some difficulty" variables in the RAND HRS are used to construct the mobility measures in Wave 2 and onward. While the RAND HRS does not provide a raw recode for difficulty using the toilet in Wave 1, a variable asked to a subset of the population was used to create the measure here.

Please see the RAND HRS for any additional cross wave differences in the comprising variables.

## HRS Variables Used:

### RAND HRS:

R10ARMSA	r10armsa:w10 r any diff-rch/xtnd arms up
R10BATHA	r10batha:w10 r any diff-bathing, shower
R10BEDA	r10beda:w10 r any diff-get in/out bed
R10CHAIRA	r10chaira:w10 r any diff-get up fr chair
R10CLIM1A	r10clim1a:w10 r any diff-clmb 1 flt stair
R10CLIMSA	r10climsa:w10 r any diff-clmb sev flt str
R10DIMEA	r10dimea:w10 r any diff-pick up a dime
R10DRESSA	r10dressa:w10 r any diff-dressing

R10EATA r10eata:w10 r any diff-eating  
R10LIFTA r10lifta:w10 r any diff-lift/carry 10lbs  
R10MAPA r10mapa:w10 r any diff-use a map  
R10MEALSA r10mealsa:w10 r any diff-prepare hot meal  
R10MEDSA r10medsa:w10 r any diff-take medications  
R10MONEYA r10moneya:w10 r any diff-managing money  
R10PHONEA r10phonea:w10 r any diff-use telephone  
R10PUSHA r10pusha:w10 r any diff-push/pull lg obj  
R10SHOPA r10shopa:w10 r any diff-shop for grocery  
R10SITA r10sita:w10 r any diff-sit for 2 hours  
R10STOOPA r10stoopa:w10 r any diff-stoop/kneel/crch  
R10TOILTA r10toilta:w10 r any diff-using the toilet  
R10WALK1A r10walk1a:w10 r any diff-walk one block  
R10WALKRA r10walkra:w10 r any diff-walk across room  
R11ARMSA r11armsa:w11 r any diff-rch/xtnd arms up  
R11BATHA r11batha:w11 r any diff-bathing, shower  
R11BEDA r11beda:w11 r any diff-get in/out bed  
R11CHAIRA r11chaira:w11 r any diff-get up fr chair  
R11CLIM1A r11clim1a:w11 r any diff-clmb 1 flt stair  
R11CLIMSA r11climsa:w11 r any diff-clmb sev flt str  
R11DIMEA r11dimea:w11 r any diff-pick up a dime  
R11DRESSA r11dressa:w11 r any diff-dressing  
R11EATA r11eata:w11 r any diff-eating  
R11LIFTA r11lifta:w11 r any diff-lift/carry 10lbs  
R11MAPA r11mapa:w11 r any diff-use a map  
R11MEALSA r11mealsa:w11 r any diff-prepare hot meal  
R11MEDSA r11medsa:w11 r any diff-take medications  
R11MONEYA r11moneya:w11 r any diff-managing money  
R11PHONEA r11phonea:w11 r any diff-use telephone  
R11PUSHA r11pusha:w11 r any diff-push/pull lg obj  
R11SHOPA r11shopa:w11 r any diff-shop for grocery  
R11SITA r11sita:w11 r any diff-sit for 2 hours  
R11STOOPA r11stoopa:w11 r any diff-stoop/kneel/crch  
R11TOILTA r11toilta:w11 r any diff-using the toilet  
R11WALK1A r11walk1a:w11 r any diff-walk one block  
R11WALKRA r11walkra:w11 r any diff-walk across room  
R12ARMSA r12armsa:w12 r any diff-rch/xtnd arms up  
R12BATHA r12batha:w12 r any diff-bathing, shower  
R12BEDA r12beda:w12 r any diff-get in/out bed  
R12CHAIRA r12chaira:w12 r any diff-get up fr chair  
R12CLIM1A r12clim1a:w12 r any diff-clmb 1 flt stair

## How Constructed:

RwHRTATTE, RwANGINE, RwCONHRTFE, RwSHINGLE, RwhRTRHME, RwoSTEOE, and RwhCHOLE indicate whether the respondent has ever been diagnosed with the specified condition. RwhRTATTE and RwhCONHRTFE are available for Wave 1, for the HRS sample in Wave 2, and then again available for the full sample starting in Wave 10. RwhANGINE is available starting in Wave 10. RwhSHINGLE is available starting in Wave 9. RwhRTRHME is available starting in Wave 10. RwoSTEOE is available starting in Wave 11. RwhCHOLE is available starting in Wave 12. Don't know, refused, or other missing responses of these variables are assigned special missing codes .d, .r, and .m, respectively. Respondents in the AHEAD sample in Wave 2 are not asked these questions and are assigned special missing code .q in Wave 2. These variables are set to plain missing (.) for respondents who did not participate in the current wave.

RwHRTATTE indicates whether the respondent has ever been diagnosed with a heart attack. In Waves 1 and 2 respondents are asked if a doctor has ever told the respondent that they had a heart attack, coronary heart disease, angina, congestive heart failure, or other heart problems. If the respondent answers yes they are then asked if they have had a heart attack or myocardial infarction. Starting in Wave 10, the HRS first asks respondents whether a doctor has ever told them they had a heart attack and then later asks whether they have had a heart attack since the last interview or in the last two years. Respondents are not asked about a heart attack if they have never reported a heart problem in all waves or if they are not currently taking medication for a heart problem and have not seen a doctor for their heart problems in the last 2 years. In either of these cases, respondents are assumed to not have had a heart attack and are assigned a value of 0. If the respondent was interviewed prior to Wave 10, missed Wave 10, and then was reinterviewed after Wave 10, they were never asked whether they ever had a heart attack and are assigned special missing .s.

RwANGINE indicates whether the respondent has ever been diagnosed with angina. Respondents are not asked about angina if they have never reported a heart problem or heart attack in all waves or if they are not currently taking medication for a heart problem and have not seen a doctor for their heart problems in the last 2 years. In either of these cases, respondents are assumed to not have angina and are assigned a value of 0. The HRS first asks respondents whether a doctor has ever told them they have angina, then they are asked whether they have had angina or chest pains due to their heart since the last interview or in the last two years. This question is asked starting in Wave 10. If the respondent was interviewed prior to Wave 10, missed Wave 10, and then was reinterviewed after Wave 10, they were never asked whether they were diagnosed with angina and are assigned special missing .s.

RwCONHRTFE indicates whether the respondent has ever been diagnosed with congestive heart failure. In Waves 1 and 2 respondents are asked whether a doctor has ever told them they have congestive heart failure. Starting in Wave 10, the HRS first asks respondents whether they have ever been diagnosed with congestive heart failure and then asks whether they have had congestive heart failure since the last interview or in the last two years. Respondents are not asked about congestive heart failure if they have never reported a heart problem in all waves or if they are not currently taking medication for a heart problem and have not seen a doctor for their heart problems in the last 2 years. In either of these cases, respondents are assumed to not have congestive heart failure and are assigned a value of 0. If the respondent was interviewed prior to Wave 10, missed Wave 10, and then was reinterviewed after Wave 10, they were never asked whether they ever were diagnosed with congestive heart failure and are assigned special missing .s.

RwSHINGLE indicates whether the respondent has ever been diagnosed with the shingles. The HRS first asks respondents whether they have ever been diagnosed with the shingles and then asks whether they have been diagnosed with the shingles since the last interview or in the last two years. This question is asked starting in Wave 9.

RwHRTRHME indicates whether the respondent has ever been diagnosed with an abnormal heart rhythm. The HRS first asks respondents whether they have ever been diagnosed with abnormal heart rhythm and then asks whether they have had abnormal heart rhythm since the last interview or in the last two years. Respondents are not asked about abnormal heart rhythm if they have never reported a heart problem, or if they are not currently taking medication for a heart problem and have not seen a doctor for their heart problems in the last 2 years. In either of these cases, respondents are assumed to not have an abnormal heart rhythm and are assigned a value of 0. If the respondent was interviewed prior to Wave 10, missed Wave 10, and then was reinterviewed after Wave 10, they were never asked whether they ever were diagnosed with abnormal heart rhythm and are assigned special missing .s.

RwOSTEOE indicates whether the respondent has ever been diagnosed with osteoporosis. The HRS first asks respondents whether they have ever been diagnosed with having osteoporosis and then asks whether they have been diagnosed with osteoporosis since the last interview or in the last two years. This question is asked starting in Wave 11.

RwHCHOLE indicates whether the respondent has ever been diagnosed with high cholesterol. The HRS first asks respondents whether they have ever been diagnosed with high cholesterol and then asks whether they have been diagnosed with high cholesterol since the last interview or in the last two years. This question is asked starting in Wave 12.

SwHRTATTE, SwANGINE, SwCONHRTFE, SwSHINGLE, SwHRTRHME, SwOSTEOE, and SwHCHOLE indicate whether the respondent's current wave's spouse has ever been diagnosed with the specified condition, and are taken from RwhRTATTE, RwangINE, RwCONHRTFE, RwSHINGLE, RwHRTRHME, RwOSTEOE, and RwhCHOLE. In addition to the special missing codes employed by RwhRTATTE, RwangINE, RwCONHRTFE, RwSHINGLE, RwHRTRHME, RwOSTEOE, and RwhCHOLE, SwHRTATTE, SwANGINE, SwCONHRTFE, SwSHINGLE, SwHRTRHME, SwOSTEOE, and SwHCHOLE employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

In Waves 1 and 2 respondents are asked if a doctor has ever told them that they had a heart attack, coronary heart disease, angina, congestive heart failure, or other heart problems. If the respondent answers yes they are then asked if they have had a heart attack or myocardial infarction. Respondents in the AHEAD sample in Wave 2 are not asked about having had a heart attack. Questions asking whether respondents have ever had a heart attack were dropped from the survey at Wave 3 and until Wave 9. Starting in Wave 10, the HRS first asks respondents whether a doctor has ever told them they had a heart attack and then later asks whether they have had a heart attack since the last interview or in the last two years. If the respondent was interviewed prior to Wave 10, missed Wave 10, and then was interviewed after Wave 10, they were never asked whether they ever had a heart attack again after Wave 10.

Questions asking whether respondents had ever been diagnosed with angina were not added until Wave 10. Starting in Wave 10, the HRS first asks respondents whether a doctor has ever told them they have angina, then they are asked whether they have had angina or chest pains due to your heart since the last interview or in the last two years. If the respondent was interviewed prior to Wave 10, missed Wave 10, and then was interviewed after Wave 10, they were never asked whether they were diagnosed with angina.

In Waves 1 and 2 respondents are asked whether a doctor has ever told them they have congestive heart failure. Respondents in the AHEAD sample in Wave 2 are not asked about having congestive heart failure. Questions about whether respondents have ever been diagnosed with congestive heart failure were dropped from the survey at Wave 3 and until Wave 9. Starting in Wave 10, the HRS first asks respondents whether they have ever been diagnosed with congestive heart failure and then asks whether they have had congestive heart failure since the last interview or in the last two years. If the respondent was interviewed prior to Wave 10, missed Wave 10, and then was interviewed after Wave 10, they were never asked whether they ever had congestive heart failure again after Wave 10.

Questions asking whether respondents have had shingles were not added until Wave 9. In Wave 9, the HRS asks all respondents whether they have ever been diagnosed with the shingles. Starting in Wave 10, respondents are asked whether they have been diagnosed with the shingles since the last interview or in the last two years if they are reinterviewed, or ever if this is their first interview.

Questions asking whether respondents had ever been diagnosed with abnormal heart rhythm were not added until Wave 10. Starting in Wave 10, the HRS first asks respondents whether they have ever been diagnosed with abnormal heart rhythm and then asks whether they have had abnormal heart rhythm since the last interview or in the last two years. If the respondent was interviewed prior to Wave 10, missed Wave 10, and then was interviewed after Wave 10, they were never asked whether they were diagnosed with abnormal heart rhythm.

Questions asking whether respondents had ever been diagnosed with osteoporosis were not added until Wave 11. In Wave 11, the HRS asks all respondents whether they have ever been diagnosed with osteoporosis. Starting in Wave 12 respondents are asked whether they have been diagnosed with osteoporosis since the last interview if they are reinterviewed, or ever if this is their first interview.

Questions asking whether respondents had ever been diagnosed with high cholesterol were not added until Wave 12. In Wave 12, the HRS asks all respondents whether they have ever been diagnosed with high cholesterol. Starting in Wave 13 respondents are asked whether they have been diagnosed with high cholesterol since the last interview if they are reinterviewed, or ever if this is their first interview.

## How Constructed:

RwHRTATT, RwANGIN, RwCONHRTF, and RwhRTRHM indicate whether the respondent reported being diagnosed with the specified condition since the last wave or in the last two years. RwANGIN is available in all waves. RwhRTATT and RwCONHRTF are available starting in Wave 2. RwhRTRHM is available starting in Wave 10. These variables are coded as 0.no, and 1.yes. Don't know, refused, or other missing responses of these variables are assigned special missing codes .d, .r, and .m, respectively. Respondents in the AHEAD sample in Wave 2 are not asked these questions about angina, heart attack, or congestive heart failure,

and Rwhrtatt, Rwangin, and Rwconhrtf are assigned special missing code .q in Wave 2. These variables are set to plain missing (.) for respondents who did not participate in the current wave.

Rwhrtatt indicates whether the respondent reported being diagnosed with a heart attack since the last interview or in the last two years. In the HRS cohort in Wave 2 only respondents who were interviewed in HRS Wave 1 were asked this question. Respondents are not asked about a heart attack if they did not report a heart problem in the current wave, or, starting in Wave 3, if they are not currently taking medication for a heart problem and have not seen a doctor for their heart problems in the last 2 years. In either of these cases, respondents are assumed to not have had a heart attack since the last wave and are assigned a value of 0. Starting in Wave 10, the HRS first asks respondents when was their first heart attack and whether they have had any more heart attacks since then, and if the respondent has had more heart attacks they are asked when was their most recent heart attack. The HRS then asks respondents who reported having had a heart attack but not since the last interview or in the last two years, whether they have had a heart attack since the last interview or in the last two years.

Rwangin indicates whether the respondent has had angina or chest pains due to their heart since the last interview or in the last two years. Respondents are not asked about angina if they did not report a heart problem or heart attack in the current wave, or, starting in Wave 3, if they are not currently taking medication for a heart problem and have not seen a doctor for their heart problems in the last 2 years. In either of these cases, respondents are assumed to not have angina and are assigned a value of 0. In Wave 1 and Wave 2 respondents were asked whether they currently have angina. Starting in Wave 3 respondents are asked whether they have had angina since the last interview or in the last two years. Starting in Wave 10, the HRS first asks respondents whether a doctor has ever told them they have angina. If they responded yes, they are then asked when their angina was first diagnosed. The HRS then asks respondents who reported having had angina but not since the last interview or in the last two years, whether they have had angina or chest pains due to their heart since the last interview or in the last two years.

Rwconhrtf indicates whether the respondent reported being diagnosed with congestive heart failure since the last interview or in the last two years. In the HRS cohort in Wave 2, only respondents who were interviewed in Wave 1 were asked this question. Respondents are not asked about congestive heart failure if they did not report a heart problem in the current wave, or, starting in Wave 3, if they are not currently taking medication for a heart problem and have not seen a doctor for their heart problems in the last 2 years. In either of these cases, respondents are assumed to not have congestive heart failure and are assigned a value of 0. Starting in Wave 10, the HRS first asks respondents when their congestive heart failure was first diagnosed. The HRS then asks respondents who reported having had congestive heart failure but not since the last interview or in the last two years, whether they have had congestive heart failure since the last interview or in the last two years.

Rwhrtrhm indicates whether the respondent reported being diagnosed with an abnormal heart rhythm since the last interview or in the last two years. Respondents are not asked about abnormal heart rhythm if they did not report a heart problem in the current wave, or if they are not currently taking medication for a heart problem and have not seen a doctor for their heart problems in the last 2 years. In either of these cases, respondents are assumed to not have an abnormal heart rhythm and are assigned a value of 0. The HRS first asks respondents when their abnormal heart rhythm was first diagnosed. The HRS then asks respondents who reported having had an abnormal heart rhythm but not since the last interview or in the last two years, whether they have had an abnormal heart rhythm since the last interview or in the last two years.

Swhrtatt, Swangin, Swconhrtf, and Swhrtrhm indicate whether the respondent's current wave's spouse has been diagnosed with the specified condition since the last interview or in the last two years, and are taken from Rwhrtatt, Rwangin, Rwconhrtf, and Rwhrtrhm. In addition to the special missing codes employed by Rwhrtatt, Rwangin, Rwconhrtf, and Rwhrtrhm, Swhrtatt, Swangin, Swconhrtf, and Swhrtrhm employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

In the HRS sample in Wave 2 only respondents who were interviewed in HRS Wave 1 were asked whether they had a heart attack since the last interview or in the last two years. Respondents in the AHEAD sample in Wave 2 are not asked about having had a heart attack. Starting in Wave 3, respondents who report not taking any heart medication and report not having seen a doctor about their heart in the past 2 years are

not asked whether they had a heart attack. Starting in Wave 10, the HRS first asks respondents when was their first heart attack and whether they have had any more heart attacks since then, and if the respondent has had more heart attacks they are asked when was their most recent heart attack. The HRS then asks respondents who reported having had a heart attack but not since the last interview or in the last two years, whether they have had a heart attack since the last interview or in the last two years.

In Waves 1 and 2 respondents were asked whether they currently have angina or chest pains due to their heart. Starting in Wave 3 respondents are asked whether they have had angina or chest pains due to their heart since the last interview or in the last two years. Starting in Wave 3, respondents who report not taking any heart medication and report not having seen a doctor about their heart in the past 2 years are not asked about having had angina. Starting in Wave 10, the HRS first asks respondents if a doctor has ever told them they have angina. If they respond yes they are then asked when their angina was first diagnosed. The HRS then asks respondents who reported having had angina but not since the last interview or in the last two years, whether they have had angina or any chest pains due to their heart since the last interview or in the last two years. Due to an added entry question starting in Wave 10 which specified that a doctor had to have diagnosed angina, instead of just having experienced angina or chest pains due to their heart (as was asked in all earlier waves), the frequency of reports of angina decreased significantly.

In the HRS sample in Wave 2 only respondents who were interviewed in HRS Wave 1 were asked whether they had congestive heart failure since the last interview or in the last two years. Respondents in the AHEAD sample in Wave 2 are not asked about having had congestive heart failure since the last interview or in the last two years and are assigned special missing code .q in Wave 2. Starting in Wave 3, respondents who report not taking any heart medication and report not having seen a doctor about their heart in the past 2 years are not asked about having had congestive heart failure. Starting in Wave 10, the HRS first asks respondents whether they have ever been told by a doctor they had congestive heart failure. If they respond yes, they are asked when their congestive heart failure was first diagnosed. The HRS then asks respondents who reported having had congestive heart failure but not since the last interview or in the last two years, whether they have had congestive heart failure since the last interview or in the last two years.

Questions about having an abnormal heart rhythm since the last interview begin in Wave 10, and so RWHRTRHM is available starting in Wave 10. The HRS first asks respondents when their abnormal heart rhythm was first diagnosed. The HRS then asks respondents who reported having had an abnormal heart rhythm but not since the last interview or in the last two years, whether they have had an abnormal heart rhythm since the last interview or in the last two years.

## How Constructed:

RwLUNGLMT, RwANGLMT, and Rwarthlmt indicate whether a specified health condition limits the daily activity of the respondent. RwLUNGLMT indicates whether lung disease limits the daily activities of the respondent. RwANGLMT indicates whether angina limits the daily activities of the respondent. Rwarthlmt indicates whether arthritis limits the daily activities of the respondent. RwLUNGLMT, RwANGLMT, and Rwarthlmt are coded as 0.no and 1.yes. Respondents who have never been diagnosed with the specified condition or are not currently experiencing angina are not asked these questions and these variables are assigned a special missing code .x. In Wave 2, respondents asked whether lung disease limits their daily activities have the option of saying that they have no job, these instances are assigned special missing .j. In Wave 2, if respondents reported having lung disease in the first wave, then RwLUNGLMT is not available and is assigned special missing .s. Wave 3 HRS respondents are not asked about arthritis limiting their daily activity and so Rwarthlmt is assigned special missing .q in Wave 3. Starting in Wave 6, if the respondent reported a heart problem in a previous wave and has been previously interviewed, then RwANGLMT is not asked and is assigned special missing .s. Don't know, refused, or other missing responses of RwLUNGLMT, RwANGLMT, and Rwarthlmt are assigned special missing codes .d, .r, and .m, respectively. These variables are not available starting in Wave 12. These variables are set to plain missing (.) for respondents who did not participate in the current wave.

SwLUNGLMT, SwANGLMT, and Swarthlmt indicate whether a specified health condition limits the daily activity of the respondent's current wave's spouse, and is taken from RwLUNGLMT, RwANGLMT, and Rwarthlmt. In addition to the special missing codes employed by RwLUNGLMT, RwANGLMT, and Rwarthlmt, SwLUNGLMT, SwANGLMT, and Swarthlmt employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Respondents are asked whether lung disease limits their daily activity starting in Wave 1. Respondents have the option of responding that they have no job only in Wave 2, and these responses are assigned special missing code .j to RwLUNGLMT. In Wave 2, if respondents reported having lung disease in the first wave, then this question is not asked and RwLUNGLMT is assigned special missing .s.

Respondents are asked whether angina and arthritis limit their daily activities starting in Wave 3. Wave 3 HRS respondents are not asked about arthritis limiting their daily activity and so Rwarthlmt is assigned special missing .q in Wave 3.

Starting in Wave 6, if the respondent reported a heart problem in a previous wave and has been previously interviewed, then whether angina limits daily activity is not asked and RwANGLMT is assigned special missing .s.

Questions about whether lung disease, angina, and arthritis limit daily activities are no longer asked starting in Wave 12.

## How Constructed:

These variables indicate whether the respondent takes medication or receives treatment for a condition. These variables are coded as 0.no, and 1.yes. If the respondent does not have the condition or is not currently experiencing the condition, and therefore would have no need to take medication treating it, then the variable is assigned a value of 0. AHEAD respondents in Wave 2 are not asked about taking medication for high blood pressure, stroke, angina, congestive heart failure, arthritis, lung disease, and psychiatric problem, and so RWRXHIBP, RWRXSTROK, RWRXANGINA, RWRXCHF, RWRXARTHR, RWRXLUNG, and RWRTRPSYCH are assigned special missing .q in Wave 2. In Wave 2, if respondents reported having the specific condition in the first wave, then RWRXHIBP, RWRXDIABO, RWRXDIABI, RWRXDIAB, RWRXSTROK, RWRXARTHR, RWRXLUNG, RWRXPSYCH, RWRTRPSYCH, RWCNCRCHEM, RWCCHRSURG, RWCNCRRADN, and RWCNCROTHR are not available and are assigned special missing .s. Starting in Wave 3, respondents who reported having heart problems and taking medication for their heart may not be asked about taking medication for angina, congestive heart failure, or heart attack, in which case RWRXANGINA, RWRXCHF, and RWRXHRTAT are assigned special missing .h. In Waves 3 through 10, if the respondent reported a heart problem in a previous wave and has been previously interviewed, then RWRXHEART is not available and is assigned special missing .s. In Waves 6 through 10, if the respondent reported a heart problem in a previous wave and has been previously interviewed, then RWRXANGINA, RWRXCHF, and RWRXHRTAT are not available and are assigned special missing .s. Starting in Wave 7 and continuing in the following odd numbered waves, if the respondent has been previously interviewed, then RWCNCRCHEM, RWCNCRSURG, RWCNCRRADN, RWCNCROTHR, and RWCNCRMEDS are not available and are assigned special missing .s. Don't know, refused, or other missing responses of these variables are assigned special missing codes .d, .r, and .m, respectively. These variables are set to plain missing (.) for respondents who did not participate in the current wave.

RWRXHIBP indicates whether the respondent takes medication for high blood pressure. The respondent is asked about taking medication for high blood pressure after reporting a high blood pressure diagnosis.

RWRXDIABO indicates whether the respondent takes oral medication for diabetes, and RWRXDIABI indicates whether the respondent uses insulin shots or a pump for diabetes. RWRXDIAB indicates whether the respondent either takes oral medication or uses insulin shots for diabetes. The respondent is asked about taking medication for diabetes after reporting a diabetes or high blood sugar diagnosis. Starting in Wave 13, respondents are first asked whether they have been diagnosed with diabetes or high blood sugar, and if so, are then asked what stage of diabetes they are in. In Wave 13, the respondent is not asked if they take insulin shots for diabetes if they report having borderline diabetes, pre-diabetes, that their blood sugar is a little high, or they have impaired glucose tolerance, in which case RWRXDIABI is assigned special missing .s. Starting in Wave 14, the respondent is also not asked if they take oral medication or insulin shots for diabetes if they had diabetes or high blood sugar before but don't have it now and don't take medication for it, or if they report never having had diabetes or high blood sugar in the diabetes stage question, in which case RWRXDIABO and RWRXDIABI are assigned a value of 0.

RWRXSTROK indicates whether the respondent takes medication for stroke. The respondent is asked about taking medication for stroke after reporting a stroke.

RwRXANGINA indicates whether the respondent takes medication for angina. The respondent is asked about taking medication for angina after reporting a diagnosis of angina or a heart attack. Starting in Wave 3, respondents who reported having heart problems and taking medication for their heart may not be asked about taking medication for angina, in which case RwRXANGINA is assigned special missing .h. In Waves 6 through 10, if the respondent reported a heart problem in a previous wave and has been previously interviewed, then RwRXANGINA is skipped and is assigned special missing .s.

RwRXCHF indicates whether the respondent takes medication for congestive heart failure. The respondent is asked about taking medication for congestive heart failure after reporting a diagnosis of congestive heart failure. Starting in Wave 3, respondents who reported having heart problems and taking medication for their heart may not be asked about taking medication for congestive heart failure, in which case RwRXCHF is assigned special missing .h. In Waves 6 through 10, if the respondent reported a heart problem in a previous wave and has been previously interviewed, then RwRXCHF is skipped and is assigned special missing .s.

RwRXARTHR indicates whether the respondent takes medication for arthritis or rheumatism (bursitis/tendinitis included). The respondent is asked about taking medication for arthritis after reporting a diagnosis of arthritis. RwRXARTHR is not available starting in Wave 12.

RwRXLUNG indicates whether the respondent takes medication for chronic lung disease, such as chronic bronchitis or emphysema, not including asthma. The respondent is asked about taking medication for lung disease after reporting a diagnosis of lung disease.

RwRXPSYCH indicates whether the respondent takes medication for an emotional, nervous or psychiatric problem. The respondent is asked about taking medication for psychiatric conditions after reporting a diagnosis of a psychiatric condition. In Waves 1 and 2, respondents are asked if they take tranquilizers, sleeping pills, antidepressants, or pills for nerves. In Waves 3 through 11, respondents are asked if they take tranquilizers, antidepressants, or pills for nerves. RwRXPSYCH is not available starting in Wave 12.

RwTRPSYCH indicates whether the respondent receives treatment for an emotional, nervous or psychiatric problem. The respondent is asked about receiving treatment for psychiatric conditions after reporting a diagnosis of a psychiatric condition. Starting in Wave 14, the variable indicates whether the respondent receives treatment for an emotional, nervous or psychiatric problem or whether they receive treatment for depression, asked in separate questions.

RwCNCRCHEM indicates whether the respondent receives chemotherapy or medication for the treatment of cancer. The respondent is presented with a list of cancer treatments and asked which treatment(s) for cancer they have received after reporting a diagnosis of cancer. If the respondent has been diagnosed with cancer but has not been treated for cancer, RwCNCRCHEM is set to 0. Starting in Wave 7 and continuing in the odd numbered waves, previously interviewed respondents are not asked about their cancer treatments, and are assigned special missing .s.

RwCNCRSURG indicates whether the respondent had surgery or a biopsy for the treatment of cancer. The respondent is presented with a list of cancer treatments and asked which treatment(s) for cancer they have received after reporting a diagnosis of cancer. If the respondent has been diagnosed with cancer but has not been treated for cancer, RwCNCRSURG is set to 0. Starting in Wave 7 and continuing in the odd numbered waves, previously interviewed respondents are not asked about their cancer treatments, and are assigned special missing .s.

RwCNCRRADN indicates whether the respondent had radiation or x-ray for the treatment of cancer. The respondent is presented with a list of cancer treatments and asked which treatment(s) for cancer they have received after reporting a diagnosis of cancer. If the respondent has been diagnosed with cancer but has not been treated for cancer, RwCNCRRADN is set to 0. Starting in Wave 7 and continuing in the odd numbered waves, previously interviewed respondents are not asked about their cancer treatments, and are assigned special missing .s.

RwCNCROTHR indicates whether the respondent had another unspecified type of treatment for cancer. The respondent is presented with a list of cancer treatments, which includes a choice of "other", and asked which treatment(s) for cancer they have received after reporting a diagnosis of cancer. If the respondent has been diagnosed with cancer but has not been treated for cancer, RwCNCROTHR is set to 0. Starting in Wave 7 and continuing in the odd numbered waves, previously interviewed respondents are not asked about their cancer treatments, and are assigned special missing .s.

RwCNCRMEDS indicates whether the respondent receives medications or treatment for symptoms (pain, nausea, rashes) for the treatment of cancer. The respondent is presented with a list of cancer treatments and asked which treatment(s) for cancer they have received after reporting a diagnosis of cancer. If the respondent has been diagnosed with cancer but has not been treated for cancer, RwCNCRMEDS is set to 0. Starting in Wave 7 and continuing in the odd numbered waves, previously interviewed respondents are not asked about their cancer treatments, and are assigned special missing .s. RwCNCRMEDS is available starting in Wave 3.

RwRXHRTAT indicates whether the respondent takes medication for a heart attack or myocardial infarction. The respondent is asked about taking medication for heart attack after reporting a diagnosis of a heart attack. RwRXHRTAT is available starting in Wave 3. Starting in Wave 3, respondents who reported having heart problems and taking medication for their heart may not be asked about taking medication for heart attack, in which case RxRXHRTAT is assigned special missing .h. In Waves 6 through 10, if the respondent reported a heart problem in a previous wave and has been previously interviewed, then RwRXHRTAT is skipped and is assigned special missing .s.

RwRXHEART indicates whether the respondent takes medication for heart problems. The respondent is asked about taking medication for heart problems after reporting a diagnosis of a heart problem. RwRXHEART is available starting in Wave 3. In Waves 3 through 10, if the respondent reported a heart problem in a previous wave and has been previously interviewed, then RwRXHEART is skipped and is assigned special missing .s.

RwRXMEMRY in Wave 9 indicates whether the respondent takes medication for a memory-related disease. In Wave 10 and onward, RwRXMEMRY indicates whether the respondent takes medication for a memory-related disease (Alzheimer's or dementia). The respondent is asked about receiving treatment for a memory-related disease after reporting a diagnosis of a memory-related disease in Wave 9, or reporting a diagnosis of Alzheimer's or dementia in Wave 10 and onward. RwRXMEMRY is available starting in Wave 9.

SwRXHIBP, SwRXDIABO, SwRXDIABI, SwRXDIAB, SwRXSTROK, SwRXANGINA, SwRXCHF, SwRXARTHR, SwRXLUNG, SwRXPSYCH, SwTRPSYCH, SwCNCRCHEM, SwCNCRSURG, SwCNCRRADN, SwCNCROTHR, SwCNCRMEDS, SwRXHRTAT, SwRXHEART, and SwRXMEMRY indicate whether the respondent's current wave's spouse takes medication or receives treatment for the specified condition, and are taken from corresponding respondent variables. In addition to the special missing codes employed by the respondent variables, the spouse variables employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

In Waves 1 and 2, respondents are asked if they take tranquilizers, sleeping pills, antidepressants, or pills for nerves when inquiring about taking medication for psychiatric conditions. In Waves 3 through 11, respondents are asked if they take tranquilizers, antidepressants, or pills for nerves when inquiring about taking medication for psychiatric conditions.

Respondents are asked about taking medication for heart attack and heart problems starting in Wave 3.

AHEAD respondents in Wave 2 are not asked about taking medication for high blood pressure, stroke, angina, congestive heart failure, arthritis, lung disease, and psychiatric problem, and so SwRXHIBP, SwRXSTROK, SwRXANGINA, SwRXCHF, SwRXARTHR, SwRXLUNG, and SwTRPSYCH are assigned special missing .q in Wave 2.

In Wave 2, if respondents reported having the specific condition in the first wave, then respondents are not asked about taking medication for high blood pressure, oral medication or insulin for diabetes, stroke, arthritis, lung disease, psychiatric treatment, and various cancer treatments, and so SwRXHIBP, SwRXDIABO, SwRXDIABI, SwRXDIAB, SwRXSTROK, SwRXARTHR, SwRXLUNG, SwRXPSYCH, SwTRPSYCH, SwCNCRCHEM, SwCHCRSURG, SwCNCRRADN, and SwCNCROTHR are assigned special missing .s.

Starting in Wave 3, respondents who reported having heart problems and taking medication for their heart may not be asked about taking medication for angina, congestive heart failure, or heart attack, in which case SwRXANGINA, SwRXCHF, and RxRXHRTAT are assigned special missing .h. In Waves 3 through 10, if the respondent reported a heart problem in a previous wave and has been previously interviewed, then the respondent is not asked about taking heart medication and RwRXHEART is assigned special missing .s. In

Waves 6 through 10, if the respondent reported a heart problem in a previous wave and has been previously interviewed, then the respondent is not asked about taking medication for angina, congestive heart failure, and heart attack, and RWRXANGINA, RWRXCHF, and RWRXHRTAT are assigned special missing .s.

In Wave 13, respondents who report having a condition other than diabetes when asked about their stage of diabetes or high blood sugar are not asked whether they take insulin for diabetes, and so RWRXDIABI is assigned special missing .s.

In Waves 14 and 15, the variable RWRTRPSYCH indicates whether the respondent receives psychiatric or psychological treatment for psychiatric conditions and for depression (asked in separate questions), whilst the previous waves only recorded whether they received treatment for psychiatric conditions.

Starting in Wave 14, the HRS has adjusted the questions asking whether the respondent takes medication for high blood pressure, diabetes, psychiatric conditions, depression, heart conditions, or Alzheimer's disease/dementia by allowing the respondent to report that they never had the condition or that they had the condition before but do not have it now and do not take medication for it. In either case, the corresponding variable is assigned a value of 0 if these answer options are selected by the respondent.

Respondents begin to be asked about taking medication for cancer treatment in Wave 3. In Waves 1 and 2, respondents with cancer diagnoses were only asked about receiving chemotherapy/medication, surgery or biopsy, radiation/x-ray, no treatments, or other treatments. In Waves 3 through 10, respondents with cancer diagnoses are asked about receiving chemotherapy or medication, surgery or biopsy, radiation/x-ray, medication, no treatments, or other treatments. Starting in Wave 11, respondents with cancer diagnoses are asked about receiving chemotherapy, surgery, radiation, medications, biopsy, x-ray, other treatments, and no treatments. Thus starting in Wave 11, biopsy and x-ray are treated as separate categories and not combined with surgery and radiation, respectively, as was done in previous waves. Starting in Wave 7 and continuing in the odd numbered waves, previously interviewed respondents are not asked about their cancer treatments. In these cases, RWCNRCHEM, RWCNCRSURG, RWCNCRRADN, RWCNCRMEDS, and RWCNCROTHR are assigned special missing .s.

Respondents are asked questions about taking medication for memory-related disease starting in Wave 9. In Wave 9, RWRXMEMORY is coded as 0 if the respondent does not report a memory-related disease. In Wave 10 and onward, RWRXMEMORY is coded as 0 if the respondent does not report an Alzheimer's disease or dementia diagnosis, but is still asked if they take medication for a memory-related disease.

Respondents are no longer asked about taking medications for arthritis or psychiatric conditions starting in Wave 12.

### How Constructed:

RADIAGDIAB indicates the age at which the respondent was first diagnosed with diabetes. Respondents are asked the year in which they were first diagnosed with diabetes, and these responses are converted to their age at diagnosis. RADIAGDIAB is asked in Wave 1, is skipped for Waves 2 through 6, and is asked again starting in Wave 7. As such RADIAGDIAB is assigned special missing .q in Waves 2 through 6. Respondents who have never been diagnosed with diabetes are not asked this question and are assigned a special missing code .x. If the age first diagnosed with diabetes is provided in multiple waves, the first provided age is used. If the calculated age is greater than the respondent's current age, then RADIAGDIAB is assigned special missing .i. The respondent is not asked if they take insulin shots for diabetes if they report having borderline diabetes, pre-diabetes, that their blood sugar is a little high, or they have impaired glucose tolerance, in which case RADIAGDIAB is assigned special missing .s. Don't know, refused, or other missing responses of RADIAGDIAB are assigned special missing codes .d, .r, and .m, respectively.

SwDIAGDIAB indicates the age at which the respondent's current wave's spouse was first diagnosed with diabetes, and is taken from RADIAGDIAB. In addition to the special missing codes employed by RADIAGDIAB, SwDIAGDIAB employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwRECCANCR indicates the most recent age at which the respondent was diagnosed with cancer. Respondents are asked the year in which they were most recently diagnosed with cancer, and these responses are converted to their age at diagnosis. Previous responses are carried forward if the respondent does not report a new cancer diagnosis. Respondents who have never been diagnosed with cancer are not asked this question and are assigned a special missing code .x. Respondents in the AHEAD sample in Wave 2 are not asked this question and are assigned special missing code .q in Wave 2. Starting in Wave 3, respondents are assigned special missing .n if they report a previous or current cancer diagnosis but report not seeing a doctor for their cancer or not receiving any cancer treatments in the past 2 years. RwRECCANCR is set to special missing .i if the calculated age is below 0 or greater than their current age. Don't know, refused, or other missing responses of RwRECCANCR are assigned special missing codes .d, .r, and .m, respectively. RwRECCANCR is set to plain missing (.) for respondents who did not participate in the current Wave.

SwRECCANCR indicates the most recent age at which the respondent's current wave's spouse was diagnosed with cancer, and is taken from RwRECCANCR. In addition to the special missing codes employed by RwRECCANCR, SwRECCANCR employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwRECHRTATT indicates the most recent age at which the respondent had a heart attack. Respondents are asked the year in which they were most recently diagnosed with a heart attack, and these responses are converted to their age at diagnosis. Responses are carried forward from previous waves if the respondent did not report a new heart attack. Respondents who have never had a heart attack are not asked this question and are assigned a special missing code .x. Respondents in the AHEAD sample in Wave 2 are not asked this question and are assigned special missing code .q in Wave 2. Starting in Wave 10, respondents who had been previously interviewed are not asked this question and are assigned special missing .s. Starting in Wave 10, RwRECHRTATT takes the value of the respondent's age of first heart attack if the respondent reports having only 1 heart attack in their lifetime. RwRECHRTATT is set to special missing .i if the calculated age is greater than their current age. Don't know, refused, or other missing responses of RwRECHRTATT are assigned special missing codes .d, .r, and .m, respectively. RwRECHRTATT is set to plain missing (.) for respondents who did not participate in the current wave.

SwRECHRTATT indicates the most recent age at which the respondent's current wave's spouse had a heart attack, and is taken from RwRECHRTATT. In addition to the special missing codes employed by RwRECHRTATT, SwRECHRTATT employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwRECSTROK indicates the most recent age at which the respondent had a stroke. Respondents are asked the year in which they were diagnosed with their most recent stroke, and these responses are converted to their age at diagnosis. Responses are carried forward from previous waves if the respondent did not report a new stroke. Respondents who have never had a stroke are not asked this question and are assigned a special missing code .x. Respondents in the AHEAD sample in Wave 2 are not asked this question and are assigned special missing code .q in Wave 2. If the calculation of age from the year of diagnosis and year of birth results in a negative number or an age greater than their current age, then RwRECSTROK is assigned special missing .i. If the respondent reports having a suspected stroke or transient ischemic attack (TIA) and the question is skipped, then RwRECSTROK is assigned special missing .t. Don't know, refused, or other missing responses of RwRECSTROK are assigned special missing codes .d, .r, and .m, respectively. RwRECSTROK is set to plain missing (.) for respondents who did not participate in the current wave.

SwRECSTROK indicates the most recent age at which the respondent's current wave's spouse had a stroke, and is taken from RwRECSTROK. In addition to the special missing codes employed by RwRECSTROK, SwRECSTROK employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RAFRHRTATT indicates the age at which the respondent had their first heart attack. Respondents are asked the year in which they were first diagnosed with a heart attack, and these responses are converted to their age at diagnosis. RAFRHRTATT is available starting in Wave 10, and so is assigned special missing .q in Waves 1 through 9. Respondents who have never had a heart attack are not asked this question and are assigned a special missing code .x. If the age of first heart attack is provided in multiple waves, the first provided age is used. RAFRHRTATT is set to special missing .i if the calculated age is greater than their current age. Respondents who had been previously interviewed are not asked this question and are assigned special missing .s. Don't know, refused, or other missing responses of RAFRHRTATT are assigned special missing codes .d, .r, and .m, respectively. RAFRHRTATT is set to plain missing (.) for respondents who did not participate in any of the waves that ask this question.

SwFRHRTATT indicates the age at which the respondent's current wave's spouse had their first attack, and is taken from RAFRHRTATT. In addition to the special missing codes employed by RAFRHRTATT, SwFRHRTATT employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RADIAGCHF indicates the age at which the respondent was first diagnosed with congestive heart failure. Respondents are asked the year in which they were first diagnosed with congestive heart failure, and these responses are converted to their age at diagnosis. RADIAGCHF is available starting in Wave 10, and so is assigned special missing .q in Waves 1 through 9. If the age first diagnosed with congestive heart failure is provided in multiple waves, the first provided age is used. If the calculation of age from the year of diagnosis and year of birth results in a negative number or an age that is greater than their current age, then RADIAGCHF is assigned special missing .i. Respondents who had been previously interviewed are not asked this question and are assigned special missing .s. Don't know, refused, or other missing responses of RADIAGCHF are assigned special missing codes .d, .r, and .m, respectively. RADIAGCHF is set to plain missing (.) for respondents who did not participate in any of the waves that ask this question.

SwDIAGCHF indicates the age at which the respondent's current wave's spouse was first diagnosed with congestive heart failure, and is taken from RADIAGCHF. In addition to the special missing codes employed by RADIAGCHF, SwDIAGCHF employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RADIAGHRTR indicates the age at which the respondent was first diagnosed with abnormal heart rhythm. Respondents are asked the year in which they were first diagnosed with abnormal heart rhythm, and these responses are converted to their age at diagnosis. RADIAGHRTR is available starting in Wave 10, and so is assigned special missing .q in Waves 1 through 9. If the age first diagnosed with abnormal heart rhythm is provided in multiple waves, the first provided age is used. RADIAGHRTR is set to special missing .i if the calculated age is greater than their current age. Respondents who had been previously interviewed are not asked this question and are assigned special missing .s. Don't know, refused, or other missing responses of RADIAGHRTR are assigned special missing codes .d, .r, and .m, respectively. RADIAGHRTR is set to plain missing (.) for respondents who did not participate in any of the waves that ask this question.

SwDIAGHRTR indicates the age at which the respondent's current wave's spouse was first diagnosed with abnormal heart rhythm, and is taken from RADIAGHRTR. In addition to the special missing codes employed by RADIAGHRTR, SwDIAGHRTR employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RADIAGANGIN indicates the age at which the respondent was first diagnosed with angina. Respondents are asked the year in which they were first diagnosed with angina, and these responses are converted to their age at diagnosis. RADIAGANGIN is available starting in Wave 10, and so is assigned special missing .q in Waves 1 through 9. If the age first diagnosed with angina is provided in multiple waves, the first provided age is used. RADIAGANGIN is set to special missing .i if the calculated age is greater than their current age. Respondents who had been previously interviewed are not asked this question and are assigned special missing .s. Don't know, refused, or other missing responses of RADIAGANGIN are assigned special missing codes .d, .r, and .m, respectively. RADIAGANGIN is set to plain missing (.) for respondents who did not participate in any of the waves that ask this question.

SwDIAGANGIN indicates the age at which the respondent's current wave's spouse was first diagnosed with angina, and is taken from RADIAGANGIN. In addition to the special missing codes employed by RADIAGANGIN, SwDIAGANGIN employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Please note that there may be extreme values for the age at first diagnosis or most recent event and these have been left to the discretion of the user.

## Cross Wave Differences in HRS

Respondents are asked when they were diagnosed with diabetes in Wave 1 and Wave 7 and onward, and so RADIAGDIAB is available in Wave 1, is unavailable for Waves 2 through 6, and is available again starting in Wave 7.

Respondents in the AHEAD sample in Wave 2 are not asked when their most recent cancer diagnosis, heart attack or stroke occurred, and so RwRECCANCR, RwRECHRTATT, and RwRECSTROK are assigned special missing code .q in Wave 2.

Starting in Wave 10, respondents who had been previously interviewed are not asked when their most recent heart attack occurred, and so RwRECHRTATT is assigned special missing .s. Starting in Wave 10, respondents are not asked when their most recent heart attack occurred if they report a value for when their first heart attack occurred and they report only having one heart attack in their lifetime, and so RwRECHRTATT takes the value of age at the respondent's first heart attack. Starting in Wave 10, RwRECHRTATT is created using two variables, whereas previous waves only used one variable.

Respondents are asked questions about when their first heart attack, diagnosis of congestive heart failure, diagnosis of abnormal heart rhythm, and diagnosis of angina occurred beginning in Wave 10. Respondents who had been previously interviewed are not asked these questions and are assigned special missing .s.

QZ076 r ever interviewed  
QZ204 first year r was diagnosed with diabetes

## Wave 15:

RC018 cancer of any kind excluding skin  
RC019 r seen doc concerning cancer  
RC020 past cancer treated  
RC024 new cancer excluding skin  
RC028 year recent cancer  
RC043 yr recent heart attack  
RC064 most recent stroke-year  
RC214 year diabetes first diagnosed  
RC258 year first had heart attack  
RC261 year had first angina  
RC264 year first had heart failure  
RC267 year first had abnormal heart rhythm  
RC276 year of most recent heart attack  
RZ076 r ever interviewed  
RZ204 first year r was diagnosed with diabetes

**Medical Procedures: Ever Have Procedure**

Wave	Variable	Label	Type

## How Constructed:

RwHRTSRGE indicates whether the respondent has ever had heart surgery. RwHRTSRGE is coded as 0.no, and 1.yes. Respondents who have not ever been diagnosed with a heart condition are not asked about heart surgery and are assigned a special missing code .x. Respondents in the HRS cohort in Wave 2 are not asked about heart surgery if they reported ever having heart problems in Wave 1 but having no heart problems since then, and so are assigned special missing .s in Wave 2. Respondents in the AHEAD sample in Wave 2 are not asked these questions and are assigned special missing code .q in Wave 2. Questions about ever having had heart surgery are not asked after Wave 2. Don't know, refused, or other missing responses of RwHRTSRGE are assigned special missing codes .d, .r, and .m, respectively. RwHRTSRGE is set to plain missing (.) for respondents who did not participate in the current wave.

SwHRTSRGE indicates whether the respondent's current wave's spouse has ever had heart surgery, and is taken from RwHRTSRGE. In addition to the special missing codes employed by RwHRTSRGE, SwHRTSRGE employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwJOINTRE indicates whether the respondent has ever had joint replacement surgery. A question about ever having had joint replacement surgery is only asked in Wave 2. RwJOINTRE is coded as 0.no, and 1.yes. Don't know, refused, or other missing responses of RwJOINTRE are assigned special missing codes .d, .r, and .m, respectively. Respondents in the AHEAD sample in Wave 2 are not asked this question and are assigned special missing code .q, in Wave 2. RwJOINTRE is set to plain missing (.) for respondents who did not participate in the current wave.

SwJOINTRE indicates whether the respondent's current wave's spouse has ever had joint replacement surgery, and is taken from RwJOINTRE. In addition to the special missing codes employed by RwJOINTRE, SwJOINTRE employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Respondents are only asked whether they have ever had heart surgery in Waves 1 and 2, and so RwHRTSRGE is only available in Wave 1 and Wave 2. Respondents in the AHEAD sample in Wave 2 are not asked whether they ever had heart surgery and are assigned special missing code .q in Wave 2. Respondents in the HRS cohort in Wave 2 are not asked about heart surgery if they reported having ever had heart problems in Wave 1 but not experiencing heart problems between Waves 1 and 2.

Respondents are only asked whether they have ever had joint replacement surgery in Wave 2, and so RwJOINTRE is only available in Wave 2. Respondents in the AHEAD sample in Wave 2 are not asked whether they ever had joint replacement surgery and are assigned special missing code .q in Wave 2.

## HRS Variables Used:

```
RAND HRS:
  R1HEARTE      r1hearte:w1 r ever had heart problems
  R2ARTHRE      r2arthre:w2 r ever had arthritis
  R2HEARTE      r2hearte:w2 r ever had heart problems
Wave 1:
  V416          b21:ever heart surge:imp
Wave 2 AHEAD:
  B280          b13. joint replacement
  BN_INHH      ahd w1: # r's responding in hhold
Wave 2 HRS:
  W378         b20.heart surgery
  WN_INHH      hrs w2: # in hhold (r1/r2 only)
```

## How Constructed:

RwHRTSRG indicates whether the respondent has had heart surgery since the last wave or in the last two years. RwHRTSRG is coded as 0.no, and 1.yes. Respondents who have not been diagnosed with a heart condition are not asked about heart surgery and are assigned a special missing code .x. Questions about whether the respondent has had heart surgery in the last two years were introduced starting in Wave 3. If the respondent is not currently taking medication for a heart problem and has not seen a doctor for their heart problem in the last 2 years, they are assumed to not have had heart surgery and are assigned a value of 0. Don't know, refused, or other missing responses of RwHRTSRG are assigned special missing codes .d, .r, and .m, respectively. RwHRTSRG is set to plain missing (.) for respondents who did not participate in the current wave.

SwHRTSRG indicates whether the respondent's current wave's spouse has had heart surgery since the last wave or in the last two years, and is taken from RwHRTSRG. In addition to the special missing codes employed by RwHRTSRG, SwHRTSRG employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwJOINTR indicates whether the respondent has had joint replacement surgery since the last wave or in the last two years. RwJOINTR is coded as 0.no, and 1.yes. Questions about whether the respondent has had joint replacement surgery in the last two years were introduced starting in Wave 3. Respondents who have not been diagnosed with arthritis are not asked about joint replacement surgery and are assigned a special missing code .x. Don't know, refused, or other missing responses of RwJOINTR are assigned special missing codes .d, .r, and .m, respectively. RwJOINTR is set to plain missing (.) for respondents who did not participate in the current wave.

SwJOINTR indicates whether the respondent's current wave's spouse has had joint replacement surgery since the last wave or in the last two years, and is taken from RwJOINTR. In addition to the special missing codes employed by RwJOINTR, SwJOINTR employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Questions about whether the respondent has had heart surgery in the last two years were introduced starting in Wave 3.

Questions about whether the respondent has had joint replacement surgery in the last two years were introduced starting in Wave 3.

**HRS Variables Used:**

## RAND HRS:

## How Constructed:

RwRXHCHOL, RwRXBREATH, RwRXSTOM, RwRXDEPRES, and RwRXBLDTHN indicate whether the respondent takes medication for a condition. These variables are coded as 0.no, and 1.yes. Don't know, refused, or other missing responses of these variables are assigned special missing codes .d, .r, and .m, respectively. These variables are set to plain missing (.) for respondents who did not participate in the current wave.

RwRXHCHOL indicates whether the respondent takes medication for high cholesterol. Starting in Wave 8, respondents are asked if they regularly take prescription medication, and if they do regularly take prescription medication, they are asked if they regularly take medication to help lower their cholesterol. Those who report not regularly taking prescription medication are assigned a value of 0. RwRXHCHOL is available starting in Wave 8.

RwRXBREATH indicates whether the respondent takes medication for asthma, allergies, or other breathing problems. Starting in Wave 8, respondents are asked if they regularly take prescription medication, and if they do regularly take prescription medication, they are asked if they regularly take medication for asthma, allergies, or other breathing problems. Those who report not regularly taking prescription medication are assigned a value of 0. RwRXBREATH is available starting in Wave 8.

RwRXSTOM indicates whether the respondent takes medication for stomach problems. Starting in Wave 8, respondents are asked if they regularly take prescription medication, and if they do regularly take prescription medication, they are asked if they regularly take medication for stomach problems. Those who report not regularly taking prescription medication are assigned a value of 0. RwRXSTOM is available starting in Wave 8.

RwRXDEPRES indicates whether the respondent takes medication to help relieve anxiety or depression. Starting in Wave 8, respondents are asked if they regularly take prescription medication, and if they do regularly take prescription medication, they are asked if they regularly take medication to help relieve anxiety or depression. Those who report not regularly taking prescription medication are assigned a value of 0. RwRXDEPRES is available starting in Wave 8.

RwRXBLDTHN indicates whether the respondent takes a medication other than aspirin to thin their blood or to prevent clots. Starting in Wave 11, respondents are asked if they regularly take prescription medication, and if they do regularly take prescription medication, they are asked if they regularly take medication to thin their blood or prevent clots. Those who report not regularly taking prescription medication are assigned a value of 0. RwRXBLDTHN is available starting in Wave 11.

SwRXHCHOL, SwRXBREATH, SwRXSTOM, SwDEPRES, and SwBLDTHN indicate whether the respondent's current wave's spouse takes medication or receives treatment for the specified condition, and are taken from corresponding respondent variables. In addition to the special missing codes employed by the respondent variables, the spouse variables employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Starting in Wave 8, respondents are asked whether they regularly take prescription medication, and if so, they are asked whether they regularly take prescription medication for cholesterol, breathing problems, stomach problems, or depression or anxiety.

Starting in Wave 11, respondents are asked whether they regularly take prescription medication other than aspirin to thin their blood or to prevent blood clots.

## HRS Variables Used:

### Wave 8:

KN175	take rx drugs regularly
KN360	rx drugs regularly cholesterol
KN362	presc drugs regularly breathing problems
KN363	presc drugs regularly stomach problems
KN365	rx drugs regularly-anxiety or depression

### Wave 9:

LN175	take rx drugs regularly
LN360	rx drugs regularly cholesterol
LN362	presc drugs regularly breathing problems
LN363	presc drugs regularly stomach problems
LN365	rx drugs regularly-anxiety or depression

### Wave 10:

MN175	take rx drugs regularly
MN360	rx drugs regularly cholesterol
MN362	presc drugs regularly breathing problems
MN363	presc drugs regularly stomach problems
MN365	rx drugs regularly-anxiety or depression

### Wave 11:

NN175 take rx drugs regularly  
NN283 rx drugs regularly-aspirin or blood thinners  
NN360 rx drugs regularly cholesterol  
NN362 presc drugs regularly breathing problems  
NN363 presc drugs regularly stomach problems  
NN365 rx drugs regularly-anxiety or depression

Wave 12:  
ON175 take rx drugs regularly  
ON283 rx drugs regularly-aspirin or blood thinners  
ON360 rx drugs regularly cholesterol  
ON362 presc drugs regularly breathing problems  
ON363 presc drugs regularly stomach problems  
ON365 rx drugs regularly-anxiety or depression

Wave 13:  
PN175 take rx drugs regularly  
PN283 rx drugs regularly-aspirin or blood thinners  
PN360 rx drugs regularly cholesterol  
PN362 presc drugs regularly breathing problems  
PN363 presc drugs regularly stomach problems  
PN365 rx drugs regularly-anxiety or depression

Wave 14:  
QN175 take rx drugs regularly  
QN283 rx drugs regularly-aspirin or blood thinners  
QN360 rx drugs regularly cholesterol  
QN362 presc drugs regularly breathing problems  
QN363 presc drugs regularly stomach problems  
QN365 rx drugs regularly-anxiety or depression

Wave 15:  
RN175 take rx drugs regularly  
RN283 rx drugs regularly-aspirin or blood thinners  
RN360 rx drugs regularly cholesterol  
RN362 presc drugs regularly breathing problems  
RN363 presc drugs regularly stomach problems  
RN365 rx drugs regularly-anxiety or depression

## How Constructed:

RwCANCST indicates the status of the respondent's cancer reported in the previous wave. RwCANCST is available starting in Wave 3. RwCANCST is coded as 1.better, 2.stayed the same, 3.worse. Starting in Wave 13, respondents who voluntarily report that their cancer is gone or in remission are assigned a value of 1. RwCANCST is assigned special missing .x if the respondent has never had cancer. RwCANCST is assigned special missing .n if the respondent reported a cancer diagnosis but has not seen a doctor about the cancer and has not received treatment for the cancer. RwCANCST is assigned special missing .c if the respondent reported a cancer diagnosis in the current wave. In Waves 9, 11, and 13, this question is not asked and RwCANCST is assigned special missing .s if the respondent had been interviewed previously, reported a cancer diagnosis in the previous interview, reported a cancer diagnosis in the current interview, and reported not seeing a doctor for the cancer. Don't know, refused, or other missing responses of RwCANCST are assigned special missing codes .d, .r, and .m, respectively. RwCANCST is set to plain missing (.) for respondents who did not participate in the current wave.

SwCANCST indicates the status of the respondent's current wave's spouse's previously reported cancer, and is taken from RwCANCST. In addition to the special missing codes employed by RwCANCST, SwCANCST employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Starting in Wave 3, respondents who previously reported a cancer diagnosis are asked about the status of their cancer.

In Waves 9, 11, and 13, this question is not asked if the respondent had been interviewed previously, reported a cancer diagnosis in the previous interview, reported a cancer diagnosis in the current interview, and reported not seeing a doctor for the cancer.

Starting in Wave 13, respondents can voluntarily report that their cancer is gone or in remission, rather than select from better, about the same, and worse.

## How Constructed:

RwBMICAT indicates the respondent's reported BMI category according to WHO standards. RwBMICAT is coded as follows: 1.underweight, less than 18.5, 2.normal weight, 18.5 to 24.9, 3.pre-obesity, 25 to 25.9, 4.obesity class 1, 30 to 34.9, 5.obesity class 2, 35 to 39.9, 6.obesity class 3, 40 or greater. RwoBESE indicates whether the respondent's BMI is categorized as obese, meaning a BMI of 30 or greater. RwoBESE is coded as 0.no, and 1.yes. Don't know, refused, or other missing responses of RwBMICAT and RwoBESE are assigned special missing codes .d, .r, and .m, respectively. These variables are set to plain missing (.) for respondents who did not participate in the current wave.

SwBMICAT and SwOBESE indicate the respondent's current wave's spouse's reported BMI category and obesity status, and are taken from RwBMICAT and RwoBESE. In addition to the special missing codes employed by RwBMICAT and RwoBESE, SwBMICAT and SwOBESE employ two additional special missing codes. A special missing

value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

### Cross Wave Differences in HRS

Please see the RAND HRS for any cross wave differences in RwbBMI, RwwHEIGHT, and RwhHEIGHT. Please note that the values used for these measures are those reported by the respondent, not measured in the health assessment.

### HRS Variables Used:

RAND HRS:

R10BMI	r10bmi:w10	self-reported body mass index=kg/m2

## How Constructed:

RwDRINKCUT, RwDRINKCR, RwDRINKBD, and RwDRINKNR indicate the respondent's feelings about their drinking habits. RwDRINKCUT indicates whether the respondent has ever felt that they should cut down on their drinking. RwDRINKCR indicates whether people have ever annoyed the respondent by criticizing their drinking. RwDRINKBD indicates whether the respondent has ever felt bad or guilty about drinking. RwDRINKNR indicates whether the respondent has ever taken a drink first thing in the morning to steady their nerves or get rid of a hangover. These variables are coded as 0.no, and 1.yes. RwDRINKCUT is asked in all waves, while RwDRINKCR, RwDRINKBD, and RwDRINKNR are asked in Wave 1 and in Wave 4 and the following waves. Respondents in the HRS Wave 2 and 3 samples are not asked RwDRINKCUT, and are assigned special missing .q in Waves 2 and 3, respectively. Starting in Wave 3, if the respondent reports not drinking, then RwDRINKCUT, RwDRINKCR, RwDRINKBD, and RwDRINKNR are assigned special missing .n. Starting in Wave 4, if the respondent has been previously interviewed, then RwDRINKCUT, RwDRINKCR, RwDRINKBD, and RwDRINKNR are not asked and these variables are assigned special missing .s.

RwCAGE is a summary variable for the respondent's feelings about their drinking habits. RwCAGE is equal to RwDRINKCUT + RwDRINKCR + RwDRINKBD + RwDRINKNR. RwCAGEM indicates the number of variables missing in the calculation of RwCAGE. RwCAGE is calculated as long as at least one of the component variables is not missing. RwCAGE and RwCAGEM are calculated only for the waves that ask all 4 component questions.

Don't know, refused, or other missing responses of RwDRINKCUT, RwDRINKCR, RwDRINKBD, RwDRINKNR, and RwCAGE are assigned special missing codes .d, .r, and .m, respectively. These variables are set to plain missing (.) for respondents who did not participate in the current wave.

SwDRINKCUT, SwDRINKCR, SwDRINKBD, SwDRINKNR, SwCAGE and SwCAGEM indicate the respondent's current wave's spouse's feelings about their drinking habits and the accompanying summary variables, and are taken from RwDRINKCUT, RwDRINKCR, RwDRINKBD, RwDRINKNR, RwCAGE and RwCAGEM. In addition to the special missing codes employed by RwDRINKCUT, RwDRINKCR, RwDRINKBD, RwDRINKNR, and RwCAGE, SwDRINKCUT, SwDRINKCR, SwDRINKBD, SwDRINKNR, and SwCAGE employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwDRINKB indicates whether the respondent ever binge drinks. RwBINGED indicates the number of days the respondent reports binge drinking in the last 3 months. RwDRINKB and RwBINGED are available starting in Wave 3. Binge drinking is determined by the question: "In the last three months, on how many days have you had four or more drinks on one occasion?" If the respondent reports a value of 0 to this question, reports never drinking, or reports drinking 0 days per week in the last 3 months, then RwDRINKB is coded as 0.no, and RwBINGED is coded as 0. If the respondent reports a number of 1 or greater to this question, then RwDRINKB is coded as 1.yes and RwBINGED takes the numerical value. If RwBINGED is coded as 92, it indicates that the respondent "drinks all the time". Don't know, refused, or other missing responses of RwDRINKB and RwBINGED are assigned special missing codes .d, .r, and .m, respectively. These variables are set to plain missing (.) for respondents who did not participate in the current wave.

SwDRINKB and SwBINGED indicate the respondent's current wave's spouse's binge drinking habits, and are taken from RwDRINKB and RwBINGED. In addition to the special missing codes employed by RwDRINKB and RwBINGED, SwDRINKB and SwBINGED employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Respondents are asked whether they feel they should cut down on their drinking in all waves, however, respondents in the HRS Wave 2 and 3 samples are not asked this question and RwdRINKCUT is assigned special missing .q in Waves 2 and 3, respectively. Respondents are asked whether others criticize their drinking, whether they feel bad about drinking, and whether they take a drink for nerve in the morning in Wave 1, are not asked at all in Waves 2 and 3, and are asked again starting in Wave 4. Starting in Wave 4, if the respondent has been previously interviewed, then these three questions are not asked and RwdRINKCR, RwdRINKBD, and RwdRINKNR are assigned special missing .s. RwcAGE and RwcAGEM are calculated in Wave 1 and in Wave 4 and the following waves based on the availability of the questions.

Respondents are asked whether they binge drink and how many days they binge drank starting in Wave 3.

### How Constructed:

RwSMOKEF indicates how many cigarettes the respondent usually smokes per day. If the respondent indicates that they currently smoke, then they are asked the number of cigarettes they usually smoke per day. In all waves, the respondent can report the amount they smoke in number of cigarettes. Starting in the HRS cohort in Wave 2 and the AHEAD and HRS cohorts in Wave 3 through Wave 13, the respondent can also report the amount they smoke in number of packs, which is multiplied by 20 to obtain the number of cigarettes

smoked per day. Only in the HRS cohort in Wave 2 can the respondent report the amount they smoke in cartons, which is multiplied by 200 to obtain the number of cigarettes smoked per day. If the respondent reports never smoking or not currently smoking, then RWSMOKEF is assigned a value of 0. For the HRS cohort in Wave 3, other responses to RWSMOKEF are assigned special missing code .o. Don't know, refused, or other missing responses of RWSMOKEF are assigned special missing codes .d, .r, .m, respectively. RWSMOKEF is set to plain missing (.) for respondents who did not participate in the current wave.

SwSMOKEF indicates how many cigarettes the respondent's current wave's spouse usually smokes per day, and is taken from RWSMOKEF. In addition to the special missing codes employed by RWSMOKEF, SwSMOKEF employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwSTRSMOK indicates the age at which the respondent started smoking. RwSTRSMOK is available starting in Wave 4. Respondents can report the age at which they started smoking, the number of years ago they started smoking, or the year in which they started smoking. If the respondent reports the number of years ago they started smoking, this value is subtracted from the respondent's age at the time of interview. If the respondent reports the year in which they started smoking, the respondent's birth year is subtracted from this value to obtain the age at which the respondent started smoking. If the calculated age started smoking takes a value of less than 1 or greater than their current age, then RwSTRSMOK is assigned special missing value .i. If the respondent was asked in the previous wave when they started smoking, then RwSTRSMOK is assigned special missing value .s. If the respondent reports multiple ages that they started smoking across waves, the value from the first wave is used. RwSTRSMOK is assigned special missing .n if the respondent reports never smoking. Don't know, refused, or other missing responses of RwSTRSMOK are assigned special missing codes .d, .r, and .m, respectively. RwSTRSMOK is set to plain missing (.) for respondents who did not participate in the current wave.

SwSTRSMOK indicates the age at which the respondent's current wave's spouse started smoking, and is taken from RwSTRSMOK. In addition to the special missing codes employed by RwSTRSMOK, SwSTRSMOK employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwQUITSMOK indicates the age at which the respondent quit smoking. In Wave 1, respondents report the number of years ago they quit smoking, and this value is subtracted from the respondent's age at the time of interview. RwQUITSMOK is not available in Waves 2 and 3. In Waves 4 and beyond, respondents can report the age at which they quit smoking, the number of years ago they quit smoking, or the year in which they quit smoking. If the respondent reports the number of years ago they quit smoking, this value is subtracted from the respondent's age at the time of interview. If the respondent reports the year in which they quit smoking, the respondent's birth year is subtracted from this value to obtain the age at which the respondent quit smoking. RwQUITSMOK takes the most recent value reported. If the calculated age quit smoking takes a value of less than 1 or greater than their current age, then RwQUITSMOK is assigned special missing value .i. If the respondent was asked in the previous wave when they stopped smoking, then RwQUITSMOK is assigned special missing value .s. RwQUITSMOK is assigned special missing .n if the respondent reports never smoking. RwQUITSMOK is assigned special missing .c if the respondent reports currently smoking. Don't know, refused, or other missing responses of RwQUITSMOK are assigned special missing codes .d, .r, and .m, respectively. RwQUITSMOK is set to plain missing (.) for respondents who did not participate in the current wave.

SwQUITSMOK indicates the age at which the respondent's current wave's spouse quit smoking, and is taken from RwQUITSMOK. In addition to the special missing codes employed by RwQUITSMOK, SwQUITSMOK employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Please note that there may be extreme values for ages the respondent started and quit smoking and have been left to the discretion of the user.

## Cross Wave Differences in HRS

Respondents can report the number of cigarettes they smoke per day in all waves. Respondents can report the number of packs they smoke per day starting in the HRS cohort in Wave 2 and the AHEAD and HRS cohorts

in Wave 3 through Wave 13. Respondents can report the number of cartons they smoke per day only in the HRS cohort of Wave 2.

Respondents are asked when they started smoking starting in Wave 4.

Respondents are asked when they quit smoking in Wave 1 and in Waves 4 and onward. In Wave 1, the respondent can report the number of years ago they quit smoking. Starting in Wave 4, the respondent can report the age at which they quit smoking, the number of years ago they quit smoking, or the year in which they quit smoking.

## How Constructed:

RwSHNGLSHTE and RwpNEUSHTE indicate whether the respondent has ever received a shingles vaccine or a pneumonia vaccine, respectively. RwSHNGLSHTE is available starting in Wave 9 and RwpNEUSHTE is available starting in Wave 11. In Wave 15, the HRS asked whether the respondent has ever received a shingles vaccine but no responses have currently been released. RwSHNGLSHTE and RwpNEUSHTE are coded as 0.no, and 1.yes. Don't know, refused, or other missing responses of RwSHNGLSHTE and RwpNEUSHTE are assigned special missing codes .d, .r, and .m, respectively. In Wave 12, re-interview respondents are not asked RwSHNGLSHTE and RwpNEUSHTE. If the respondent previously reported having received the vaccine, a value of 1 is fed-forward. If they were not asked in the current wave and had reported not receiving the vaccination in a previous wave, then these variables are assigned special missing code .s. These variables are set to plain missing (.) for respondents who did not participate in the current wave.

SwSHNGLSHTE and SwpNEUSHTE indicate whether the respondent's current wave's spouse has ever received a shingles vaccine or pneumonia vaccine, and are taken from RwSHNGLSHTE and RwpNEUSHTE. In addition to the special missing codes employed by RwSHNGLSHTE and RwpNEUSHTE, SwSHNGLSHTE and SwpNEUSHTE employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Respondents are asked whether they have ever received a shingles vaccine starting in Wave 9. In Wave 15, the HRS asked this question but no responses have currently been released. Respondents are asked whether they have ever received a pneumonia vaccine starting in Wave 11.

In Wave 12, re-interviewed respondents are not asked about having received a shingles or pneumonia vaccine. If the respondent previously reported having received the vaccine, then a value of 1 is fed-forward for RwSHNGLSHTE and RwpNEUSHTE. If they were not asked in the current wave and had reported not receiving the vaccination in a previous wave, then these variables are assigned special missing code .s.

### HRS Variables Used:

Wave 9:	
LC246	shingles vaccine
Wave 10:	
MC246	shingles vaccine
Wave 11:	
NC246	shingles vaccine
NC278	had pneumonia vaccination
Wave 12:	
OC246	shingles vaccine
OC278	had pneumonia vaccination
OZ076	r ever interviewed
OZ242	r has been asked about shingles in pw
OZ264	pw pneumonia vaccination
Wave 13:	
PC246	shingles vaccine
PC278	had pneumonia vaccination
PZ076	r ever interviewed
PZ242	r has been asked about shingles in pw
PZ264	pw pneumonia vaccination
Wave 14:	
QC246	shingles vaccine
QC278	had pneumonia vaccination
QZ076	r ever interviewed
QZ242	r has been asked about shingles in pw
QZ264	pw pneumonia vaccination
Wave 15:	
RC246	shingles vaccine
RC278	had pneumonia vaccination
RZ076	r ever interviewed
RZ242	r has been asked about shingles in pw
RZ264	pw pneumonia vaccination

## How Constructed:

RwORIENT is a summary measure for the respondent's ability to correctly name the day of the month, the month, the year, and the day of the week (RwDY, RwMO, RwYR, and RwdW in the RAND HRS). It sums RwDY, RwMO, RwYR, and RwdW as long as no components are missing, and ranges from 0 to 4, with a higher score indicating a better orientation to time. RwORIENT is assigned special missing .p if RwDY, RwMO, RwYR, or RwdW is assigned special missing .s or .x, meaning the interview was completed by proxy. RwORIENT is assigned special missing .q for the HRS cohort in Wave 2 when these questions were not asked. RwORIENT is assigned special missing .a if the cognition questions were skipped because the respondent was younger than 65. Otherwise missing responses to RwORIENT are assigned special missing .m. RwORIENT is assigned plain missing (.) if the respondent did not participate in the current wave.

RwFORIENT is a flag variable indicating whether any of the components of RwORIENT are imputed. They are based on the values from RwfDY, RwfMO, RwfYR, and RwfDW in the RAND HRS. RwFORIENT is assigned a value of 0 if none of the components of RwORIENT were imputed, and is assigned a value of 1 if at least one of the components of RwORIENT were imputed. RwFORIENT is assigned a value of -1 if the value for RwORIENT is missing and assigned a value of .p, .q, .n, or .m. RwFORIENT is assigned plain missing (.) if the respondent did not participate in the current wave.

SwORIENT is the current wave's spouse's time orientation score, and is taken from the spouse's values to RwORIENT. SwFORIENT is the current wave's spouse's flag for their time orientation score, and is taken from the spouse's values to RwFORIENT. In addition to the special missing codes used in RwORIENT and RwFORIENT, SwORIENT and SwFORIENT employ two other missing codes: .u and .v. The special missing value .u is used when the respondent does not report being coupled in the current wave. The special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Questions about date naming begin in AHEAD Wave 1, and so RwORIENT is available starting in AHEAD Wave 1. From Wave 4 forward, the questions are only asked of interviewees and re-interviewees who are 65 or older. If the questions were skipped because the respondent is younger than 65, then special missing value .a is assigned.

RwORIENT is not currently available for Waves 14 and 15, but will be incorporated with the next data release.

### How Constructed:

RwNUMBER is the summary measure that scores the respondent's ability for mathematic performance. There are at most 3 questions asked to each respondent that require respondents to do simple computations, such as fraction-based calculations of the number of people affected by a disease, division-based calculations of lottery winnings, and the amount accrued as bank interest.

The number of numeracy questions asked depends on the number of questions the respondent answers correctly.

Every respondent is asked the same first two questions. The first question is: "If the chance of getting a disease is 10 percent, how many people out of 1,000 (one thousand) would be expected to get the disease?" The second question is: "If 5 people all have the winning numbers in the lottery and the prize is two million dollars, how much will each of them get?" If the respondent answered correctly either the number of people that would be expected to get the disease question, or the amount received by each of the lottery winners question, HRS then asks the final question: "Let's say you have \$200 in a savings account. The account earns 10 percent interest each year. How much would you have in the account at the end of two years?"

RwNUMER is the summary score indicating how well the respondent answered the numeracy questions. RwNUMER ranges from 0 to 3. A score of 0 indicates the respondent did not answer any of the first two questions correctly and was not asked the third. A score of 1 to 3 indicates the respondent answered at least one of the first two questions correctly and RwNUMER counts the total number of correct questions. Don't know, refused, or other missing responses of RwNUMER are assigned special missing codes .d, .r, .m, respectively. RwNUMER is set to special missing .p if the cognition questions were skipped because the interview was by proxy. If the respondent was not asked the numeracy questions because they answered the questions in a previous wave, special missing value .x is assigned. RwNUMER is set to plain missing (.) for respondents who did not respond to the current wave.

SwNUMER is the current wave's spouse's numeracy score, and its values are taken from RwNUMER. In addition to the special missing codes used in RwNUMER, SwNUMER employs two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

The questions that are used to calculate numeracy scores begin in Wave 6, and so RwNUMER is available starting in Wave 6. The questions are always asked of new interview respondents. From Wave 7 forward, they are asked of re-interview respondents only in alternative waves, skipping odd-numbered waves and asked in even-numbered waves.

### How Constructed:

RwVERBF contains the respondent's verbal fluency score, and is available starting in Wave 10. The respondent has one minute to name as many animals as fast as they can. Acceptable answers included any member of the animal kingdom, real or mythical. The HRS collects the total number of animal names, and if some were reported incorrectly, then also the number of incorrect animal names. RwVERBF is the count of the number of acceptable animal names, after subtracting the number of incorrect animal names from the total number of animal names. If that calculation produces a negative value, then RwVERBF is assigned a value of 0. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, or .m, respectively. RwVERBF is set to special missing .p if the cognition questions were skipped because the interview was by proxy. In Waves 10 and 11, RwVERBF is set to special missing .i if the test was declared invalid, reasons include technical/computer problems, language problems, interruptions, or someone else giving answers to the respondent. Starting in Wave 12, RwVERBF is set to special missing .a if this question was skipped because the respondent was younger than 65, and is set to special missing .x if this question was skipped because the respondent had answered this question in a previous interview. RwVERBF is set to plain missing (.) for respondents who did not respond to the current wave.

SwVERBF is the current wave's spouse's verbal fluency score, and is taken from the spouse's values to RwVERBF. In addition to the special missing codes used in RwVERBF, SwVERBF employs two additional missing codes: .u and .v. The special missing value .u is used when the respondent does not report being coupled in the current wave. The special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

The question about verbal fluency begins in Wave 10, and so RwVERBF is available starting in Wave 10. In Waves 10 and 11, the original HRS coded invalid tests, don't know or not ascertained and refused in the question for total animal answers. From Wave 12, they do not code invalid, don't know, not ascertained, or refused responses. Starting in Wave 12, this test was not given to respondents who had been asked this question in a previous interview, or to those who were younger than 65.

## How Constructed:

The following variables pertain to a series of questions that asked the proxy whether the respondent has improved, stayed the same, or gotten worse in various situations that require memory or intelligence. The interviewer emphasized the importance of comparing present performance with past performance and asked the proxy to compare the respondent's current ability with the respondent's ability 2 years ago.

In RwCIQSCORE1, the informant compared the respondent's current ability to remember things about family and friends, such as occupations, birthdays, and addresses, with their ability in the past.

In RwCIQSCORE2, the informant compared the respondent's current ability to remember things that have happened recently with their ability in the past.

In RwCIQSCORE3, the informant compared the respondent's current ability to recall conversations a few days later with their ability in the past.

In RwCIQSCORE4, the informant compared the respondent's current ability to remember their address and telephone number with their ability in the past.

In RwCIQSCORE5, the informant compared the respondent's current ability to remember what day and month it is with their ability in the past.

In RwcIQSCORE6, the informant compared the respondent's current ability to remember where things are usually kept with their ability in the past.

In RwcIQSCORE7, the informant compared the respondent's current ability to remember where to find things that have been put in a different place than usual with their ability in the past.

In RwcIQSCORE8, the informant compared the respondent's current ability to know how to work familiar machines around the house with their ability in the past.

In RwcIQSCORE9, the informant compared the respondent's current ability to learn to use a new gadget or machine around the house with their ability in the past.

In RwcIQSCORE10, the informant compared the respondent's current ability to learn new things in general with their ability in the past.

In RwcIQSCORE11, the informant compared the respondent's current ability to follow a story in a book or on TV with their ability in the past.

In RwcIQSCORE12, the informant compared the respondent's current ability to make decisions on everyday matters with their ability in the past.

In RwcIQSCORE13, the informant compared the respondent's current ability to handle money for shopping with their ability in the past.

In RwcIQSCORE14, the informant compared the respondent's current ability to handle financial matters with their ability in the past. Examples include pension-related decisions or dealing with the bank.

In RwcIQSCORE15, the informant compared the respondent's current ability to handle other everyday mathematical problems, such as knowing how much food to buy and knowing how much time elapsed between visits from family or friends, with their ability in the past.

In RwcIQSCORE16, the informant compared the respondent's current ability to use their intelligence to understand what's going on and to reason things through with their ability in the past.

RwcIQSCORE1 - RwcIQSCORE16 are coded as follows: 1.Much improved, 2.A bit improved, 3.Not much changed, 4.A bit worse, and 5.Much worse. RwcJORMSCORE indicates the average value of RwcIQSCORE1 - RwcIQSCORE16 and ranges from 0-5. RwcJORMSCORE is calculated as long as at least one component is not missing. Special missing .p is assigned to non-proxy interviews. Proxies can respond that the question does not apply for RwcIQSCORE1 - RwcIQSCORE16, in which case the variable is assigned special missing value .n. Don't know and refused responses are assigned special missing .d and .r, respectively. Other missing responses are assigned special missing .m. Starting in Wave 4, proxies for respondents younger than 65 are not asked these questions and those responses are assigned special missing .a. RwcIQSCORE1 - RwcIQSCORE16 and RwcJORMSCORE are assigned plain missing (.) if the respondent did not participate in the current wave.

SwcIQSCORE1 - SwcIQSCORE16 indicate the current wave's spouse's responses to RwcIQSCORE1 - RwcIQSCORE16. SwcJORMSCORE indicates the average value of SwcIQSCORE1 - SwcIQSCORE16, and its values are taken from RwcJORMSCORE. In addition to the special missing codes used in RwcIQSCORE1 - RwcIQSCORE16 and RwcJORMSCORE, SwcIQSCORE1 - SwcIQSCORE16 and SwcJORMSCORE employ two other missing codes: .u and .v. The special missing value .u is used when the respondent does not report being coupled in the current wave. The special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Questions from the JORM IQCODE Test begin in Wave 3, and so RwcIQSCORE1 - RwcIQSCORE16 and RwcJORMSCORE are available starting in Wave 3.

**How Constructed:**

HwGRCHILD indicates the number of grandchildren the respondent and their spouse have. The family respondent is asked for the number of grandchildren the respondent and their spouse/partner have, including any biological, step-, or adopted children of the respondent's or their spouse/partner's children, altogether. HwGRCHILD is assigned a value of 0 if the family respondent reports having no children or grandchildren. HwGRCHILD is assigned a value of 80 if the family respondent reports having 80 or more grandchildren. In Wave 1, HwGRCHILD is assigned special missing .s if the respondent was not designated as a respondent for that section and so the question was not asked, and is assigned special missing .h if all of the respondent's children lived with the respondent and so the question was not asked. In Waves 6 and 7, HwGRCHILD is assigned special missing .e if there was an error in the preload or preceding questions for respondents without grandchildren in the previous wave that caused this question to not be asked. In Wave 14, HwGRCHILD is assigned special missing .f if there was no family respondent for the household, and assigned special missing .c if the respondent is not in contact with any children. Don't know, refused, or other missing responses of HwGRCHILD are assigned special missing codes .d, .r, .m, respectively. HwGRCHILD is set to plain missing (.) for respondents who did not respond to the current wave.

Please note that there is a variable in the RAND Family Longitudinal Kid-Level file, KwNKID, which could be summed to obtain the number of grandchildren for the respondent based on the report of the number of children each of the respondent's children have. We noticed some inconsistencies between the two numbers and have presented the direct report of grandchildren over the summed number of grandchildren to be more consistent with how this information is collected in other HRS family surveys and harmonized in their respective datasets.

HwGGRCHILD indicates the number of great-grandchildren the respondent and their spouse have. The family respondent is first asked whether the respondent and their spouse have any great-grandchildren, and if so, how many great-grandchildren they have. HwGGRCHILD is assigned a value of 0 if the family respondent reports having no children, grandchildren, or great-grandchildren. HwGGRCHILD is assigned a value of 80 if the family respondent reports having 80 or more great-grandchildren. Don't know, refused, or other missing responses of HwGGRCHILD are assigned special missing codes .d, .r, .m, respectively. In Waves 6 and 7, HwGGRCHILD is assigned special missing .e if there was an error in the preload or preceding questions for respondents without grandchildren in the previous wave that caused the number of grandchildren and great-grandchildren to not be asked. HwGGRCHILD is set to plain missing (.) for respondents who did not respond to the current wave. HwGGRCHILD is only available in Waves 3 through 11.

Due to missing information in the current version of the raw variables, we will not provide H15GRCHILD or H15GGRCHILD until the final version of the HRS data for Wave 15 becomes available.

## Cross Wave Differences in HRS

In Wave 1, the family respondent is not asked about the number of grandchildren if the respondent was not designated to respond to that section or if the respondent had no children that were living outside of the respondent's home. Starting in Wave 4, the family respondent is not asked about having grandchildren if it is assumed the respondent had no grandchildren, meaning if the respondent had been interviewed previously, reported having no grandchildren in the previous wave and reported having no new grandchildren in the current wave, or if the respondent had not been interviewed previously and reported having no living children and no children ever born.

The family respondent is not asked about the number of great-grandchildren in Wave 1 or the HRS or AHEAD cohorts in Wave 2. In the AHEAD cohort in Wave 3 these questions are asked of all family respondents. In the HRS cohort in Wave 3, these questions are not asked if the family respondent reports having no grandchildren, in which case it is assumed that they also have no great-grandchildren. In HRS Wave 4, these questions are not asked if the family respondent reports having no grandchildren or it is assumed that they have no grandchildren, in which case it is also assumed that they have no great-grandchildren. In Waves 5 through 11 and starting again in Wave 15, these questions are not asked if they had no grandchildren at the last wave and report having no new grandchildren in the current wave, in which case it is assumed that they have no great-grandchildren. These questions are not asked at all in Waves 12 through 14. Starting in Wave 15, if the family reports having grandchildren but having no new grandchildren this wave, then this question is not asked.

Starting in Wave 4, the HRS instructs the interviewer to code the number of grandchildren and great-grandchildren as 80 if the family respondent reports having more than 80 grandchildren or great-grandchildren, respectively.

In Wave 6, if the preload is missing but the respondent reports having no grandchildren in the previous wave, then the family respondent is not asked the number of grandchildren or great-grandchildren in the current wave. In Wave 7, if the preload indicates that the respondent had no grandchildren in the previous wave but the family respondent is not asked whether they have any new grandchildren in the current wave, then the family respondent is also not asked the number of grandchildren or great-grandchildren in the current wave.

In Waves 14 and 15, the respondent is not asked about the number of grandchildren if there is no family respondent for the household or if the respondent is not in contact with any children. While this appears to be the same skip pattern present in earlier waves, there is a higher frequency of these occurrences in Wave 14 necessitating the use of special missing values.

### How Constructed:

RAMOMEDUCL and RADADEDUCL identify the level of education the respondent's mother and father, respectively, completed according to a three-tier harmonized scale which we developed to compare education levels across countries. This harmonized education scale is a simplified version of 1997

International Standard Classification of Education (ISCED-97) codes. For more information on ISCED codes, see [www.uis.unesco.org](http://www.uis.unesco.org) and the OECD document entitled "Classifying Educational Programmes: Manual for ISCED-97 Implementation in OECD Countries, 1999 Edition". RAMOMEDUCL and RADADEDUCL are coded as follows: 1.Less than upper secondary education, 2.Upper secondary & vocational training, and 3.Tertiary education. If the respondent's parent's education was less than high school, equivalent to 0 to 11 years, then RAMOMEDUCL and RADADEDUCL are assigned a value of 1. If the respondent's parent's education was GED, High-school graduate, or some college, equivalent to 12 to 15 years, then RAMOMEDUCL and RADADEDUCL are assigned a value of 2. If the respondent's parent's education was college and above, equivalent to 16 or more years, then RAMOMEDUCL and RADADEDUCL are assigned a value of 3. Special missing .a is assigned if the respondent was interviewed in Waves 2 or 3, but was not interviewed when the questions were asked. Special missing .o is assigned if the response is something other than what was provided in the list. Special missing .s is assigned to RADADEDUCL if the respondent never lived with their father or their father was not alive. Don't know, refused, and other missing responses are coded as special missing .d, .r, .m, respectively.

RAMOMEDUCL and RADADEDUCL are available for Waves 1, 4, and thereafter.

SwMOMEDUCL and SwDADEDUCL indicate the current wave's spouse's mother's and father's level of completed education according to a three-tier harmonized scale. Their values are taken from the spouse's value to RAMOMEDUCL and RADADEDUCL. If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of .v is used. Plain missing (.) is assigned is the respondent's spouse did not respond to the current wave.

RAMOMEDUC8 and RADADEUC8 identify whether the respondent's mother and father, respectively, completed eight or more years of education. A value of one is assigned if the respondent's parent completed 8 or more years of education, and a value of zero is assigned if the respondent's parent did not. Special missing .a is assigned if the respondent was interviewed in the HRS cohorts for Waves 2 or 3, but was not interviewed when the questions were asked. Special missing .o is assigned if the response is something other than what was provided in the list. Special missing .s is assigned to RADADEUC8 if the respondent never lived with their father or their father was not alive. Don't know, refused, and other missing responses are coded as special missing .d, .r, .m, respectively.

SwMOMEDUC8 and SwDADEDUC8 indicate whether the current wave's spouse's mother and father completed eight or more years of education. Their values are taken from the spouse's value to RAMOMEDUC8 and RADADEUC8. If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of .v is used. Plain missing (.) is assigned is the respondent's spouse did not respond to the current wave.

## Cross Wave Differences in HRS

In Wave 1 the question HRS asks about the parents' level of education is: "What is the highest grade of school your father completed?" Answers are given in years of school, 0-17. In the AHEAD cohorts in Waves 2 and 3, the question is different from Wave 1 and asks: "Did your father/mother attend 8 years or more of school?" and the possible answers are "yes" and "no." No questions about the parents' levels of education are asked in the HRS cohorts in Waves 2 and 3. From Wave 4 forward, the question is similar to the Wave 1 wording: "And what is the highest grade of school your father/mother completed?" with possible answers ranging from 0-17.

## HRS Variables Used:

## How Constructed:

RADADOCUP indicates the respondent's father's occupation when the respondent was 16. A code of 1 is assigned if the occupation is categorized as white collar, which includes management occupations, business and financial operations occupations, computer and mathematical occupations, architecture and engineering occupations, life, physical and social science occupations, community and social service occupations, legal occupations, education, training and library occupations, art, design, entertainment, sport and media occupations, healthcare practitioners and technical occupations, or healthcare support occupations. A code of 2 is assigned if the occupation is categorized as blue collar, which includes protective service occupations, food preparation and serving related occupations, building and grounds cleaning and maintenance occupations, personal care and service occupations, sales and related occupations, office, and administrative support occupations, construction and extraction occupations, installation, maintenance and repair occupations, production occupations, or transportation and material moving occupations. A code of 3 is assigned if the occupation was serving in the military. RADADOCUP takes the first reported father's occupation a respondent provides. Special missing .s is assigned if the respondent never lived with their father or their father was not alive. Special missing .n is assigned if the respondent's father never worked or was always disabled. Special missing .a is assigned if the respondent's father's occupation question was skipped because the respondent was not in the survey when the question was asked as the question was added in the HRS cohort in Wave 3. Don't know, refused, or other missing responses are assigned special missing values .d, .r, or .m, respectively.

SwDADOCUP indicates the current wave's spouse's father's occupation when the respondent was 16, and its values are taken from the spouse's values to RADADOCUP. In addition to the special missing codes used in RADADOCUP, SwDADOCUP employs two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed. Plain missing (.) is assigned is the respondent's spouse did not respond to the current wave.

## Cross Wave Differences in HRS

Questions related to father's occupation were added to the HRS in the HRS cohort in Wave 3. In Waves 3 through 10, there were separate categories for business operations specialists and financial specialists, which were combined into a single category of business and financial operations occupations starting in Wave 11. Also in Waves 3 through 10, there were separate categories for construction trades and extraction workers, which were combined into a single category of construction and extraction occupations starting in Wave 11.

### How Constructed:

HwLVWITH indicates the living arrangement of the household. A code of 1 indicates that the respondent lives alone. A code of 2 indicates that the respondent lives only with a spouse. A code of 3 indicates that the respondent lives only with children. A code of 4 indicates that the respondent lives with a spouse and children. A code of 5 indicates that the respondent lives with a combination of spouse, children and/or other household members. A code of 1 is assigned if there is only one household member (HwHHRES=1) and only one household respondent (HwHHRESP=1). A code of 2 is assigned if the respondent is married or partnered (RwMSTAT=1 or 3), and there are two household respondents (HwHHRESP=2) with no other individuals reported in the household roster that live in the house permanently, or there is one household respondent (HwHHRESP=1) with two individuals in the household (HwHHRES=2) and no children or other individuals living permanently in the household. A code of 3 is assigned if the respondent is not married or partnered, there is only one household respondent, and only children are reported as living permanently in the household roster. A code of 4 is assigned if the respondent is married or partnered, and children are reported as living permanently in the household roster, but no other people. A code of 5 is assigned if the respondent reports anyone other than a spouse or children living permanently in the household roster. This variable does not consider anyone who is living permanently or temporarily away from the household at the given wave. Don't know, refused, or other missing responses of HwLVWITH are assigned special missing codes .d, .r, .m, respectively. HwLVWITH is set to plain missing (.) for respondents who did not respond to the current wave.

HwLVALONE indicates whether the respondent lives alone. A code of 1 indicates that the respondent lives by themselves. A code of 0 indicates that the respondent lives with others. The respondent is considered to live alone if there is only one resident in the household (HwHHRES) and only one respondent in the household (HwHHRESP).

HwLVSPOUSE indicates whether the respondent lives only with a spouse. A code of 1 indicates that the respondent only lives with a spouse. A code of 0 indicates that the respondent does not live with a

spouse only or that the respondent lives alone. The respondent is considered to live with a spouse if the respondent reports being married or partnered, and reports living with a spouse when asked directly, and having no other household members.

HwLVKIDS indicates whether the respondent lives with children only. A code of 1 indicates that the respondent lives only with children. A code of 0 indicates that the respondent does not live with children only or that the respondent lives alone. The respondent is considered to live with children if there is at least one co-resident child (HwRESDKN), and the respondent is not living with a spouse or other household members.

HwLVSPKID indicates whether the respondent lives with a spouse and children. A code of 1 indicates that the respondent lives with a spouse and at least one child. A code of 0 indicates that the respondent lives with people other than a spouse and children only or that the respondent lives alone.

HwLVOTHER indicates whether the respondent lives with other people, besides a spouse and children. A code of 1 indicates that the respondent lives with at least one other person besides a spouse and children. A code of 0 indicates that the respondent does not live with any other people besides a spouse and/or children or that the respondent lives alone. The respondent is considered to live with other people if the respondent reports any other person living in the household, as reported in the HRS Preload HH Member Child file or the Wave 2 HHLIST file.

Don't know, refused, or other missing responses of HwLVALONE, HwLVSPOUS, HwLVKIDS, HwLVSPKID, and HwLVOTHER are assigned special missing codes .d, .r, .m, respectively. HwLVALONE, HwLVSPOUS, HwLVKIDS, HwLVSPKID, and HwLVOTHER are set to plain missing (.) for respondents who did not respond to the current wave.

Please note that there can be discrepancies between reports of household members in different locations in the HRS survey. As such, these variables are our best estimate as to the makeup of the respondent's household.

## Cross Wave Differences in HRS

In Wave 2, the relationship of the household member is carried forward from Wave 1 if the individual was not a new household member.

In Waves 1 and 2, children categories include: child (natural), adopted child, stepchild, child-in-law, foster child, child-na type. In Waves 3 through 5, children categories include: child, step/partner child, child-in-law. Starting in Wave 6, children categories include: son, stepson, spouse/partner of daughter, daughter, stepdaughter, spouse/partner of son, unlisted child or child-in-law, former step-child, former child-in-law, unknown child, unknown-in-law.

In Waves 1 and 2, other categories include: Grandchild, great grandchild, parent's and grandparents of the respondent or the respondent's spouse, siblings and siblings' children of the respondent or the respondent's spouse, parent's siblings and their children of the respondent or the respondent's spouse, non-relatives of the respondent and the respondent's spouse. In Waves 3 through 5, other categories include: grandkid, professional, sibling, sibling of spouse, parent or parent-in-law, other relative, other. Starting in Wave 6, other categories include: grandchild, father, father of spouse/partner, mother, mother of spouse/partner, r's parents, brother, brother of spouse/partner, sister, sister of spouse/partner, other relative, other individual, paid helper, professional, professional (specify), late spouse/partner, relationship unknown, spouse/partner of grandchild.

### How Constructed:

HwKIDU14 is the count of the number of the respondent's children and/or grandchildren who live in the household with the respondent and are below the age of 14 (aged 0 to 13). HwKIDU6 is the count of the number of the respondent's children and/or grandchildren who live in the household with the respondent and are below the age of 6 (aged 0 to 5). A value of 0 is assigned if the respondent does not live with any children of the appropriate age. Don't know, refused, or other missing responses of HwKIDU14 and HwKIDU6 are assigned special missing codes .d, .r, .m, respectively. HwKIDU14 and HwKIDU6 are set to plain missing (.) for respondents who did not respond to the current wave.

### Cross Wave Differences in HRS

The relationship specifications vary slightly by wave, with more detail usually available in later waves. In Wave 1 and the HRS cohort in Wave 2, it includes child (natural), adopted child, stepchild, foster child, grandchild (any), and great grandchild (any). In the AHEAD cohort in Wave 2, the AHEAD and HRS cohorts in Wave 3, and in Waves 4 and 5, it includes the respondent's child, step/partner child, or grandchild. In Waves 6 and onward, it includes the respondent's son, stepson, daughter, stepdaughter, grandchild, unlisted child or child-in-law, former step-child, or ambiguous child relationship.

## How Constructed:

RwWIDSLW indicates whether the respondent is newly widowed or had a spouse die since the last interview. RwWIDSLW is coded as 1 if the respondent reports becoming widowed, when directly asked if they divorced or became widowed, or if the respondent's marital status (RwMSTATH) changed from married in the previous wave to widowed in the current wave. RwWIDSLW is coded as 0 if the respondent did not directly report becoming widowed, if the respondent's marital status did not change, or if the respondent's marital status changed but did not change from married to widowed.

RwPARDSLW indicates whether the respondent had a parent die since the last interview. RwPARDSLW is coded as 1 if the respondent has fewer living parents in the current wave than in the previous wave. RwPARDSLW is coded as 0 if the respondent's parents are both already deceased, if the respondent's parents are both still alive, or if there is no change in the number of the respondent's parents.

HwCHIDSLW indicates whether the respondent had a child die since the last interview. HwCHIDSLW is coded as 1 if the respondent reports fewer living children in the current wave than in the previous wave using HwCHILD, or if the number of deceased children increased in the current wave compared to the previous wave using HwDIEDKN from the RAND HRS Family data. HwCHIDSLW is coded as 0 if the respondent reports the same or a greater number of living children in the current wave compared to the previous wave, or if the number of deceased children remains unchanged between the current and previous wave. In Waves 8 through 11, respondents who complete the leave behind questionnaire are asked if they have ever had a child die, and if so, what year the child died. HwCHIDSLW is coded as 1 if the respondent reported that a child died in 2005-2006 for Wave 8, in 2007-2008 for Wave 9, in 2009-2010 for Wave 10, or in 2011-2012 for Wave 11, or if the previously described conditions are met. HwCHIDSLW is coded as 0 if the respondent has never had a child die, if their child passed away in a different year, or if the previously described conditions are met. Starting in Wave 15, HwCHIDSLW is calculated based on a version of HwDIEDKN that is created based on variables from the Preload HH Member Child dataset because HwDIEDKN is not currently available from the RAND HRS Family data for this wave. Only in this wave, HwCHIDSLW is assigned special missing .k if there is a smaller number of deceased children in the current wave than in the previous wave.

Don't know, refused, or other missing responses for RwWIDSLW, RwPARDSLW, and HwCHIDSLW are assigned special missing codes .d, .r, .m, respectively. Special missing .b is assigned if the respondent is a new respondent in the current wave. Special missing .c is assigned if the respondent has been previously interviewed but was not interviewed in the previous wave. Special missing .i is assigned to RwWIDSLW if

the respondent has an unknown unmarried status in the current wave. Respondents in the AHEAD cohort in Wave 2 were not previously interviewed, so RwWIDSLW, and RwPARDSLW, cannot be calculated and are assigned special missing .q in Wave 2. RwWIDSLW, RwPARDSLW, and HwCHIDSLW are set to plain missing (.) for respondents who did not respond to the current wave.

SwWIDSLW and SwPARDSLW indicate whether the respondent's current wave's spouse became widowed or lost a parent, respectively, since the last interview. Their values are taken from RwWIDSLW and RwPARDSLW. In addition to the special missing codes used in RwWIDSLW and RwPARDSLW, SwWIDSLW and SwPARDSLW employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

RwWIDSLW and RwPARDSLW are available starting in Wave 2.

HwCHIDSLW is available starting in Wave 3. In Waves 8 through 11, this variable incorporates information from two questions in the leave behind questionnaire in addition to the variables used in the other waves. Starting in Wave 15, this variable is calculated using a different version of HwDIEDKN because HwDIEDKN is not yet available from the RAND HRS Family data. Also in this wave, HwCHIDSLW is assigned special missing .k if the number of deceased children is smaller in the current wave than in the previous wave.

## How Constructed:

HwDEPNNT indicates whether the respondent and their spouse had any children, parents, or other relatives dependent on them for more than half of their support, also known as dependents. HwDEPNNT is coded as 0 if the respondent and their spouse had no dependents, and is coded as 1 if the respondent and their spouse did report having dependents. This question is not asked for respondents in the AHEAD cohorts in Waves 2 or 3, so HwDEPNNT is assigned special missing .q in Waves 2 and 3 if the respondent was part of these samples. Don't know, refused, or other missing responses of HwDEPNNT are assigned special missing codes .d, .r, .m, respectively. HwDEPNNT is set to plain missing (.) for respondents who did not respond to the current wave.

HwDEPNNTN indicates the number of dependents the respondent and their spouse report having. If the family respondent reports having any children, parents, or other relatives dependent on them for more than half of their support, then the family respondent is asked how many people that was. HwDEPNNTN is assigned a value of 0 if the family respondent reports having no dependents. This question is not asked for respondents in the AHEAD cohorts in Waves 2 or 3, so HwDEPNNTN is assigned special missing .q in Waves 2 and 3 if the respondent was part of these samples. Don't know, refused, or other missing responses of HwDEPNNTN are assigned special missing codes .d, .r, .m, respectively. HwDEPNNTN is set to plain missing (.) for respondents who did not respond to the current wave.

## Cross Wave Differences in HRS

Questions about dependents are asked to the family respondent starting in the HRS cohort in Wave 2. These questions are not asked to respondents in HRS Wave 1 or in the AHEAD cohorts in Waves 2 or 3.

## How Constructed:

RwRELGWK indicates whether the respondent attended religious services at least weekly during the past year. RwRELGWK is coded as 0 if the respondent attended religious services two or three times a month, one or more times a year, or not at all, and is coded as 1 if the respondent attended religious services more than once a week or once a week. This question was not asked in the AHEAD cohort in Wave 2 or in the HRS cohort in Wave 3, so RwRELGWK is assigned special missing .q in Waves 2 and 3 if the respondent was part of these samples. In Wave 5, RwRELGWK is assigned special missing .p if this question was not asked because the interview was by proxy. Also in Wave 5, this question was only asked to a small percentage of the sample, so RwRELGWK is assigned special missing .s if the respondent was not selected to answer this question. Don't know, refused, or other missing responses of RwRELGWK are assigned special missing codes .d, .r, .m, respectively. RwRELGWK is set to plain missing (.) for respondents who did not respond to the current wave.

RwSOCRELG\_H indicates the frequency with which the respondent attended religious services during the past year. Values in RwSOCRELG\_H are assigned as follows: 1.more than once a week, 2.once a week, 3.two or three times a month, 4.one or more times a year, 5.not at all. This question was not asked in the AHEAD cohort in Wave 2 or in the HRS cohort in Wave 3, so RwSOCRELG\_H is assigned special missing .q in Waves 2 and 3 if the respondent was part of these samples. In Wave 5, RwSOCRELG\_H is assigned special missing .p if this question was not asked because the interview was by proxy. Also in Wave 5, this question was only asked to a small percentage of the sample, so RwSOCRELG\_H is assigned special missing .s if the respondent was not selected to answer this question. Don't know, refused, or other missing responses of RwSOCRELG\_H are assigned special missing codes .d, .r, .m, respectively. RwSOCRELG\_H is set to plain missing (.) for respondents who did not respond to the current wave.

SwRELGWK and SwSOCRELG\_H indicate whether the respondent's current wave's spouse attended weekly religious services and the frequency with which they attended religious services. Their values are taken from the spouse's values to RwRELGWK and RwSOCRELG\_H. In addition to the special missing codes used in RwRELGWK and RwSOCRELG\_H, SwRELGWK and SwSOCRELG\_H employ two additional special missing values, .u and .v. If the respondent is not designated as coupled in the current wave and assumed to be single, a special missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married, a special missing value of .v is used.

RwRELGIMP indicates how important the respondent reports religion being in their life. Values in RwRELGIMP are assigned as follows: 1.very important, 2.somewhat important, 3.not too important. This question was not asked in the HRS cohort in Wave 2, so RwRELGIMP is assigned special missing .q in Wave 2 if the respondent was part of that sample. In the AHEAD and HRS cohorts in Wave 3, the respondent is given the option of reporting "other", in which case RwRELGIMP is assigned special missing .o. Don't know, refused, or other missing responses of RwRELGIMP are assigned special missing codes .d, .r, .m, respectively. RwRELGIMP is set to plain missing (.) for respondents who did not respond to the current wave.

SwRELGIMP indicates how important religion is to the respondent's current wave's spouse and its values are taken from the spouse's values to SwRELGIMP. In addition to the special missing codes used in RwRELGIMP, SwRELGIMP employs two additional special missing values, .u and .v. If the respondent is not designated as coupled in the current wave and assumed to be single, a special missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married, a special missing value of .v is used.

## Cross Wave Differences in HRS

Questions about the frequency of attendance for religious activities are not asked at all in the AHEAD cohort in Wave 2, in the HRS cohort in Wave 3, or in Waves 4 and 6. In Wave 5, this question is only asked to a small percentage of the sample and only if the interview was not completed with a proxy.

Questions about the importance of religion are not asked in Wave 1 or in the HRS cohort in Wave 2, or starting in Wave 12. The respondent can only report "other" in the AHEAD and HRS cohorts in Wave 3.

### How Constructed:

RwSOCWK and RwSOCMN indicate whether the respondent participates in any social activities on a weekly or monthly basis, respectively. In the leave-behind questionnaire, the respondent is asked how often they participate in certain activities. Starting in Wave 9, these activities include: caring for a sick or disabled adult; doing activities with grandchildren, nieces/nephews, or neighborhood children; doing volunteer work with children or young people; doing any other volunteer or charity work; attending an education or training course; going to a sport, social, or other club; and attending meetings of non-religious organizations, such as political, community, or other interest groups. Starting in Wave 12, participating in a local community arts groups such as a choir, dance, photography, theatre, or music groups is added to the list of activities. RwSOCWK is assigned a value of 0 if the respondent participated in all of these activities several times a month, at least once a month, not in the last month, or never. RwSOCWK is assigned a value of 1 if the respondent participated in any of these activities daily, several times a week, or once a week. RwSOCMN is assigned a value of 0 if the respondent participated in all of these activities not in the last month or never. RwSOCMN is assigned a value of 1 if the respondent participated in any of these activities daily, several times a week, once a week, several times a month, or at least once a month. RwSOCWK and RwSOCMN are assigned special missing .1 if the respondent was not eligible for or did not complete the leave behind questionnaire. Don't know, refused, or other missing responses for RwSOCWK and RwSOCMN are assigned special missing codes .d, .r, .m, respectively. RwSOCWK and RwSOCMN are set to plain missing (.) for respondents who did not respond to the current wave.

SwsOCWK and SwsOCMN indicate whether the respondent's current wave's spouse participates in any social activities on a weekly or monthly basis, respectively. Their values are taken from the spouse's values to RwSOCWK and RwSOCMN. In addition to the special missing codes used in RwSOCWK and RwSOCMN, SwsOCWK and SwsOCMN employ two additional special missing values, .u and .v. If the respondent is not designated as coupled in the current wave and assumed to be single, a special missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married, a special missing value of .v is used.

## Cross Wave Differences in HRS

Respondents are asked about the frequency of caring for a sick or disabled adult, doing activities with grandchildren, nieces/nephews, or neighborhood children, doing volunteer work with children or young people, doing any other volunteer or charity work, attending an education or training course, going to a sport, social, or other club, and attending meetings of non-religious organizations, such as political, community, or other interest groups starting in Wave 9. Respondents are asked about participating in a local community arts group such as a choir, dance, photography, theatre, or music group starting in Wave 12.

In Wave 9, respondents are given the following answer choices: 1.daily, 2.several times a week, 3.once a week, 4.several times a month, 5.at least once a month, 6.not in the last month. Starting in Wave 10, an additional answer choice is included: 7.never/not relevant.

## How Constructed:

HwKCNT indicates whether the respondent and/or their spouse (if applicable) were in weekly contact with at least one child in the past year, and is taken from the core interview. Starting in Wave 3, the family respondent is asked how often they or their spouse had contact, either in person or by phone, mail, or e-mail, with each child in the past year. The respondent provides the number of times with the options of the following time periods: day, week, every two weeks, month, year, other. HwKCNT is assigned a value of 0 if the respondent and/or their spouse were not in weekly contact with any children, and is assigned a value of 1 if the respondent and/or their spouse were in contact with any child at least once a week or had a child residing with them or temporarily away. HwKCNT is assigned special missing .k if the respondent reports not having any children. Responses using the "other" time frame are assigned special missing .o. This question is not asked for the AHEAD sample in Wave 3, so HwKCNT is assigned special missing .q in this wave. This question is skipped in specific waves when an alternate wave flag is employed, as such HwKCNT is assigned special missing .s in Waves 4, 8, 10, 12, and 14. Don't know, refused, or other missing responses are assigned special missing .d, .r, .m, respectively. HwKCNT is set to plain missing (.) for respondents who did not respond to the current wave.

RwKCNTF indicates whether the respondent has any frequent (i.e., at least weekly) contact with any of their children in person at the individual level, and is taken from the leave behind questionnaire. Respondents are first asked whether they have any children, and if so, how often they meet up with their children who don't live with them on average. RwKCNTF is assigned a code of 0 if the respondent meets up with their children once or twice a month, every few months, once or twice a year, or less than once a year or never. RwKCNTF is assigned a code of 1 if the respondent meets up with their children three or more times a week, or once or twice a week. RwKCNTF is assigned special missing .k if the respondent reports not having any children. RwKCNTF is assigned special missing .l if the respondent was not eligible for or did not complete the leave-behind questionnaire. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, .m, respectively. RwKCNTF is assigned a blank missing (.) if the respondent did not participate in the current wave.

RwKCNTPM indicates whether the respondent has any frequent (i.e., at least weekly) contact with any of their children on the phone, by mail, or by e-mail at the individual level, and is taken from the leave behind questionnaire. Starting in Wave 12, it also indicates whether the respondent has weekly contact with any of their children through social media. Respondents are first asked whether they have children, and if so, how often they speak on the phone, write/e-mail, or are in contact through social media with their children who don't live with them on average. RwKCNTPM is assigned a code of 0 if the respondent speaks with their children on the phone, writes/e-mails, or contacts them through social media once or twice a month, every few months, once or twice a year, or less than once a year or never. RwKCNTPM is assigned a code of 1 if the respondent speaks with their children on the phone, writes/e-mails, or contacts them through social media three or more times a week, or once or twice a week. RwKCNTF is assigned special missing .k if the respondent reports not having any children. RwKCNTPM is assigned special missing .l if the respondent was not eligible for or did not complete the leave-behind questionnaire. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, .m, respectively. RwKCNTPM is assigned a blank missing (.) if the respondent did not participate in the current wave.

RwKCNT indicates whether the respondent has any frequent (i.e., at least weekly) contact with any of their children either in person or by phone, mail, or e-mail at the individual level, and is taken from the leave behind questionnaire. Starting in Wave 12, it also indicates whether the respondent has weekly contact with any of their children through social media. RwKCNT is assigned a code of 0 if the respondent

meets up, speaks, writes, e-mails, or is in contact through social media with their children once or twice a month, every few months, once or twice a year, or less than once a year or never. RwcCNT is assigned a code of 1 if the respondent meets up, speaks, writes, e-mails, or is in contact through social media with their children three or more times a week, or once or twice a week. RwcCNTF is assigned special missing .k if the respondent reports not having any children. RwcCNT is assigned special missing .l if the respondent was not eligible for or did not complete the leave-behind questionnaire. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, .m, respectively. RwcCNT is assigned a blank missing (.) if the respondent did not participate in the current wave.

SwkCNTF, SwkCNTPM, and SwkCNT indicate whether the respondent's current wave's spouse has weekly contact with their children in person or by phone, mail, e-mail, or social media, and their values are taken from RwcCNTF, RwcCNTPM, and RwcCNT. In addition to the special missing codes employed by RwcCNTF, RwcCNTPM, and RwcCNT, SwkCNTF, SwkCNTPM, and SwkCNT employ two additional special missing codes, .u and .v. Special missing code .u is used when the respondent does not report being coupled in the current wave. Special missing .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

### Cross Wave Differences in HRS

The question asking about contact between the respondent/spouse and their children (HwkcCNT) is not asked in Wave 1 or in the AHEAD or HRS cohorts in Wave 2. In Waves 3 through 5, the respondent is also given the choice of using "almost never" as the frequency for their response to how often the respondent and/or their spouse are in contact with each child. Alternate wave flags are used in Wave 4 and in even-numbered waves starting in Wave 8. As such, this question is not asked to a large portion of the sample of returning respondents in these waves.

Respondents are asked about individual contact between the respondent and their children (RwcCNTF, RwcCNTPM, and RwcCNT) in the leave-behind questionnaire starting in Wave 7. Starting in Wave 7, respondents are asked how frequently they meet up, speak on the phone, or write or email their children. Starting in Wave 12, respondents are also asked how frequently they communicate by Skype, Facebook, or other social media with their children.

### How Constructed:

HwPCNT indicates whether the respondent and/or their spouse (if applicable) were in weekly contact with at least one parent on parent-in-law in the past year, and is taken from the core interview. Starting in the HRS cohort in Wave 2, the family respondent is asked how often they or their spouse had contact, either in person or by phone, mail, or e-mail, with their living parent(s) or parent(s)-in-law in the past year. The respondent provides the number of times with the options of the following time periods: day, week, every two weeks, month, year, almost never, other. HwPCNT is assigned a value of 0 if the respondent and/or their spouse were not in weekly contact with any parents or parents-in-law, and is assigned a value of 1 if the respondent and/or their spouse were in contact with any parent or parent-in-law at least once a week, or if at least one of their parents lives with them. HwPCNT is assigned a value of .n if the respondent and their spouse have no living parents. Responses using the "other" time frame are assigned special missing .o. This question is not asked for the AHEAD samples in Waves 2 and 3, so HwPCNT is assigned special missing .q in these waves. Don't know, refused, or other missing responses are assigned special missing .d, .r, .m, respectively. HwPCNT is set to plain missing (.) for respondents who did not respond to the current wave.

### Cross Wave Differences in HRS

This question is not asked in HRS Wave 1 and in the AHEAD samples in Waves 2 and 3.

The method of contact changes across the waves. In Waves 2 through 8, the family respondent is asked if they have contact in person or by phone or mail. Starting in Wave 9, the family respondent is asked if they have contact in person or by phone, mail, or e-mail.

In the HRS cohort in Wave 2, the family respondent is asked up to 4 questions about the frequency of contact with parents; if the parent was alive, the family respondent was asked separately for the respondent's mother, respondent's father, partner's mother, and partner's father. In Waves 3 through 5, there are 6 possible questions the family respondent is asked about the frequency of contact with parents; if the parent was alive, the family respondent was asked separately for the respondent's parents (together if both are alive and still together), respondent's mother, respondent's father, partner's parents (together if both are alive and still together), partner's mother, and partner's father. Starting in Wave 6, there are 3 possible questions the family respondent is asked about the frequency of contact with parents; if the parent was alive, the family respondent was asked about the respondent's parents (together if both are alive and still together), respondent's mother, and respondent's father.

## How Constructed:

RwRFCNTF indicates whether the respondent has any frequent (i.e., at least weekly) contact with any of their relatives or friends in person at the individual level, and is taken from the leave behind questionnaire. Respondents are first asked whether they have any relatives and whether they have any friends, and if so, how often they meet up with their relatives and friends, respectively, on average. RwRFCNTF is assigned a code of 0 if the respondent has no relatives or friends, or meets up with relatives or friends once or twice a month, every few months, once or twice a year, or less than once a year or never. RwRFCNTF is assigned a code of 1 if the respondent meets up with relatives or friends three or more times a week, or once or twice a week. RwRFCNTF is assigned special missing .l if the respondent was not eligible for or did not complete the leave-behind questionnaire. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, .m, respectively. RwRFCNTF is assigned a blank missing (.) if the respondent did not participate in the current wave.

RwRFCNTPM indicates whether the respondent has any frequent (i.e., at least weekly) contact with any of their relatives or friends on the phone, by mail, or by e-mail at the individual level, and is taken from the leave behind questionnaire. Starting in Wave 12, it also indicates whether the respondent has weekly contact with any of their relatives or friends through social media. Respondents are first asked whether they have any relatives and whether they have any friends, and if so, how often they speak on the phone, write/e-mail, or are in contact through social media with their relatives and friends, respectively, on average. RwRFCNTPM is assigned a code of 0 if the respondent has no relatives or friends, or speaks with relatives or friends on the phone or by mail/e-mail or social media once or twice a month, every few months, once or twice a year, or less than once a year or never. RwRFCNTPM is assigned a code of 1 if the respondent speaks with relatives or friends on the phone or by mail/e-mail or social media three or more times a week, or once or twice a week. RwRFCNTPM is assigned special missing .l if the respondent was not eligible for or did not complete the leave-behind questionnaire. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, .m, respectively. RwRFCNTPM is assigned a blank missing (.) if the respondent did not participate in the current wave.

RwRFCNT indicates whether the respondent has any frequent (i.e., at least weekly) contact with any of their relatives or friends either in person or by phone, mail, or e-mail at the individual level, and is taken from the leave behind questionnaire. Starting in Wave 12, it also indicates whether the respondent has weekly contact with any of their relatives or friends through social media. RwRFCNT is assigned a code of 0 if the respondent has no relatives or friends, or meets up or speaks, mails, e-mails, or is in contact through social media with relatives or friends once or twice a month, every few months, once or twice a year, or less than once a year or never. RwRFCNT is assigned a code of 1 if the respondent meets up or speaks, mails, e-mails, or is in contact through social media with relatives or friends three or more times a week, or once or twice a week. RwRFCNT is assigned special missing .l if the respondent was not eligible for or did not complete the leave-behind questionnaire. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, .m, respectively. RwRFCNT is assigned a blank missing (.) if the respondent did not participate in the current wave.

SwRFCNTF, SwRFCNTPM, and SwRFCNT indicate whether the respondent's current wave's spouse has weekly contact with their relatives or friends in person or by phone, mail, e-mail, or social media, and their values are taken from RwRFCNTF, RwRFCNTPM, and RwRFCNT. In addition to the special missing codes employed by RwRFCNTF, RwRFCNTPM, and RwRFCNT, SwRFCNTF, SwRFCNTPM, and SwRFCNT employ two additional special missing codes, .u and .v. Special missing code .u is used when the respondent does not report being coupled in the current wave. Special missing .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Please note that respondents are asked separately about the frequency of contact with their relatives and friends. The frequency of contact with relatives and friends has been combined in the Harmonized HRS to provide a consistent measure across Harmonized datasets, but comparable variables considering only relatives or considering only friends can be created based on the HRS data.

### Cross Wave Differences in HRS

Respondents are asked about individual contact between the respondent and their relatives and friends (RwRFCNTF, RwRFCNTPM, and RwRFCNT) in the leave-behind questionnaire starting in Wave 7. Starting in Wave 7, respondents are asked how frequently they meet up, speak on the phone, or write or email their relatives or friends. Starting in Wave 12, respondents are also asked how frequently they communicate by Skype, Facebook, or other social media with their relatives or friends.

### HRS Variables Used:

#### Wave 7:

JLB514	q14. have any other immediate family
JLB516A	q16a. meet up with oth family members
JLB516B	q16b. speak on phone with oth fam mem
JLB516C	q16c. write or email oth family members
JLB518	q18. have any friends
JLB520A	q20a. meet up with friends
JLB520B	q20b. speak on phone with friends
JLB520C	q20c. write or email friends
JLBTYPE	type of questionnaire r answered
JV900	leave behind instructions

#### Wave 8:

KLB011	q11. have any other immediate family
KLB013A	q13a. meet up with oth family members
KLB013B	q13b. speak on phone with oth fam mem
KLB013C	q13c. write or email oth family members
KLB015	q15. have any friends
KLB017A	q17a. meet up with friends
KLB017B	q17b. speak on phone with friends
KLB017C	q17c. write or email friends
KLBCOMP	mode completed leave behind qnaire
KLBELIG	2006 leave behind eligibility

#### Wave 9:

LLB011	q11. have any other immediate family
LLB013A	q13a. meet up with oth family members
LLB013B	q13b. speak on phone with oth fam mem
LLB013C	q13c. write or email oth family members
LLB015	q15. have any friends
LLB017A	q17a. meet up with friends
LLB017B	q17b. speak on phone with friends
LLB017C	q17c. write or email friends
LLBCOMP	mode completed leave behind qnaire
LLBELIG	2008 leave behind eligibility

#### Wave 10:

MLB011	q11. have any other immediate family
MLB013A	q13a. meet up with oth family members
MLB013B	q13b. speak on phone with oth fam mem
MLB013C	q13c. write or email oth family members
MLB015	q15. have any friends
MLB017A	q17a. meet up with friends
MLB017B	q17b. speak on phone with friends
MLB017C	q17c. write or email friends
MLBCOMP	mode completed leave behind qnaire
MLBELIG	2010 leave behind eligibility

#### Wave 11:

NLB011	q11. have any other immediate family
--------	--------------------------------------

NLB013A	q13a. meet up with oth family members
NLB013B	q13b. speak on phone with oth fam mem
NLB013C	q13c. write or email oth family members
NLB015	q15. have any friends
NLB017A	q17a. meet up with friends
NLB017B	q17b. speak on phone with friends
NLB017C	q17c. write or email friends
NLBCOMP	mode completed leave behind qnaire
NLBELIG	2012 leave behind eligibility
Wave 12:	
OLB010	q10. have any other immediate family
OLB012A	q12a. meet up with oth family members
OLB012B	q12b. speak on phone with oth fam mem
OLB012C	q12c. write or email oth family members
OLB012D	q12d. communicate by social media
OLB014	q14. have any friends
OLB016A	q16a. meet up with friends
OLB016B	q16b. speak on phone with friends
OLB016C	q16c. write or email friends
OLB016D	q16d. communicate by social media
OLBCOMP	mode completed leave behind qnaire
OLBELIG	2014 leave behind eligibility
Wave 13:	
PLB010	q10. have any other immediate family
PLB012A	q12a. meet up with oth family members
PLB012B	q12b. speak on phone with oth fam mem
PLB012C	q12c. write or email oth family members
PLB012D	q12d. communicate by social media
PLB014	q14. have any friends
PLB016A	q16a. meet up with friends
PLB016B	q16b. speak on phone with friends
PLB016C	q16c. write or email friends
PLB016D	q16d. communicate by social media
PLBCOMP	mode completed leave behind qnaire
PLBELIG	2016 leave behind eligibility
Wave 14:	
QLB010	q10. any other immediate family
QLB012A	q12a. meet up with oth fam mems
QLB012B	q12b. speak on phone with fam mem
QLB012C	q12c. write or email oth fam mems
QLB012D	q12d. communicate by social media
QLB014	q14. have any friends
QLB016A	q16a. meet up with friends

## How Constructed:

RwJCONCNTRB, RwJDEALPPLB, and RwJCOMPUB indicate how often the respondent feels specific statements are true about their current job. RwJCONCNTRB indicates how frequently the respondent's current job requires intense concentration or attention. RwJDEALPPLB indicates how frequently the respondent's current job requires skill in dealing with other people. RwJCOMPUB indicates how frequently the respondent's current job requires working with computers. These variables are coded as follows: 1.all or almost all of the time, 2.most of the time, 3.some of the time, 4.none or almost none of the time. If these respondents are not working for pay, RwJCONCNTRB, RwJDEALPPLB, and RwJCOMPUB are assigned special missing .w. Starting in the HRS cohort in Wave 2, respondents are not asked about concentration and dealing with other people if the respondent did not change jobs between waves, and RwJCONCNTRB and RwJDEALPPLB are carried forward from the most recent wave. In Wave 5, respondents are not asked about working with computers if they did not change companies or job titles between waves, including if the respondent is self-employed, and RwJCOMPUB is carried forward from Wave 1 if available, and is assigned special missing .s if they did not participate in Wave 1. Only in the AHEAD cohort in Wave 3, respondents are not asked about concentration and dealing with other people if the respondent worked 520 hours or less for the year, so RwJCONCNTRB and RwJDEALPPLB are assigned special missing .f in Wave 3. In Wave 7 and onward, respondents who work 200 or fewer hours during the year are not asked these questions, and RwJCONCNTRB, RwJDEALPPLB, and RwJCOMPUB are assigned special missing .f. In the AHEAD and HRS cohorts in Wave 3 and Wave 4 and onward, proxy respondents are not asked these questions, and RwJCONCNTRB, RwJDEALPPLB, and RwJCOMPUB are assigned special missing .p. Starting in Wave 4, respondents residing in nursing homes are not asked these questions, and RwJCONCNTRB, RwJDEALPPLB, and RwJCOMPUB are assigned special missing .h. Starting in Wave 9, if the respondent says that the statement does not apply these variables are assigned special missing .n. These questions are not asked at all in the AHEAD cohort in Wave 2, so these variables are assigned special missing .q in Wave 2. Questions regarding the frequency of computer use are not asked at all in Waves 2 through 4. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, .m, respectively. RwJCONCNTRB, RwJDEALPPLB, and RwJCOMPUB are set to plain missing (.) for respondents who did not respond to the current wave.

SwJCONCNTRB, SwJDEALPPLB, and SwJCOMPUTB indicate how often the current wave's spouse feels specific statements are true about their job, and are taken from the spouse's values to RwJCONCNTRB, RwJDEALPPLB, and RwJCOMPUTB. In addition to the special missing codes used in RwJCONCNTRB, RwJDEALPPLB, and RwJCOMPUTB, SwJCONCNTRB, SwJDEALPPLB, and SwJCOMPUTB employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Respondents in Wave 1 and starting again in Wave 5 are asked about the frequency of using a computer, whereas respondents in Waves 2 through 4 are not asked this question.

In Wave 1 and starting in HRS Wave 3, employed and self-employed respondents are asked the same questions, whereas employed and self-employed respondents are asked these questions separately in the HRS cohort in Wave 2 and the AHEAD cohort in Wave 3.

Starting in the HRS cohort in Wave 2, respondents are not asked these questions about concentration and dealing with other people if they didn't change employers or jobs.

In the AHEAD cohort in Wave 3, these questions are not asked if the respondent worked less than 520 hours per year. Starting in Wave 7, respondents who work 200 or fewer hours during the year are not asked these questions.

In the AHEAD cohort in Wave 3 and in Waves 6 and onward, these questions are not asked if the interview is completed by proxy.

Starting in Wave 4, these questions are not asked if the respondent lives in a nursing home.

In Wave 5, respondents are not asked about working with computers if they did not change companies or job titles between waves, including if the respondent is self-employed.

### How Constructed:

RwJDIFFA, RwJGRREDHRA, and RwJMLDEMA indicate how much the respondent agrees with specific statements about their current job. RwJDIFFA indicates how much the respondent agrees that their current job requires them to do more difficult things than it used to. RwJGRREDHRA indicates how much the respondent agrees that, as they get older, they would prefer to gradually reduce the hours they work on their current job, keeping their pay per hour the same. RwJMLDEMA indicates how much the respondent agrees that their current employer would let older workers move to a less demanding job with less pay if they wanted to. These variables are coded as follows: 1.strongly agree, 2.agree, 3.disagree, 4.strongly disagree. If

the respondents are self-employed, they are not asked about moving to less demanding jobs and RwJMLDEMA is assigned special missing .s. If the respondents are not working for pay, RwJDIFFA, RwJGRREDHRA, and RwJMLDEMA are assigned special missing .w. In the HRS cohort in Wave 2 and starting in Wave 9, if the respondent says that the statement does not apply, then these variables are assigned special missing .n. Only in the AHEAD cohort in Wave 3, respondents are not asked questions about their job becoming more difficult or gradually reducing hours if the respondent worked 520 hours or less for the year, so RwJDIFFA and RwJGRREDHRA are assigned special missing .f in Wave 3. In Wave 7 and onward, RwJDIFFA, RwJGRREDHRA, and RwJMLDEMA are assigned special missing .f if the respondent is not asked this question because they work 200 or fewer hours during the year. In the AHEAD and HRS cohorts in Wave 3 and Wave 4 and onward, proxy respondents are not asked these questions, and these variables are assigned special missing .p. Starting in Wave 4, respondents residing in nursing homes are not asked these questions, and these variables are assigned special missing .h. These questions are not asked at all in the AHEAD cohort in Wave 2, so these variables are assigned special missing .q in Wave 2. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, .m, respectively. RwJDIFFA, RwJGRREDHRA, and RwJMLDEMA are set to plain missing (.) for respondents who did not respond to the current wave.

SwJDIFFA, SwJGRREDHRA, and SwJMLDEMA indicate how much the current wave's spouse agrees with specific statements about their job, and are taken from the spouse's values to RwJDIFFA, RwJGRREDHRA, and RwJMLDEMA. In addition to the special missing codes used in RwJDIFFA, RwJGRREDHRA, and RwJMLDEMA, SwJDIFFA, SwJGRREDHRA, and SwJMLDEMA employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Respondents are not asked how much they agree that they would prefer to gradually reduce their hours in Wave 1. This question starts in the HRS cohort in Wave 2.

In Wave 1 and starting in the HRS cohort in Wave 3, employed and self-employed respondents are asked the same questions, whereas employed and self-employed respondents are asked these questions separately in the HRS cohort in Wave 2 and the AHEAD cohort in Wave 3.

These questions are not asked at all in the AHEAD cohort in Wave 2.

In the HRS cohort in Wave 2 and starting in Wave 9, the respondent is given the option to say that the statement does not apply.

In the AHEAD cohort in Wave 3, these questions are not asked if the respondent worked less than 520 hours per year. Starting in Wave 7, respondents who work 200 or fewer hours during the year are not asked these questions.

In the AHEAD and HRS cohorts in Wave 3 and Wave 4 and onward, these questions are not asked if the interview is completed by proxy.

Starting in Wave 4, these questions are not asked if the respondent lives in a nursing home.

## How Constructed:

RwJENJWRKA indicates how much the respondent agrees that they really enjoy going to work. RwJENJWRKA is coded as follows: 1.strongly agree, 2.agree, 3.disagree, 4.strongly disagree. If the respondents are not working for pay, RwJENJWRKA is assigned special missing .w. In the HRS cohort in Wave 2 and starting in Wave 9, if the respondent says that the statement does not apply, then these variables are assigned special missing .n. Only in the AHEAD cohort in Wave 3, respondents are not asked questions about enjoying work if the respondent worked 520 hours or less for the year, so RwJENJWRKA is assigned special missing .f in Wave 3. In Wave 7 and onward, this variable is assigned special missing .f if the respondent is not asked this question because they work 200 or fewer hours during the year. In the AHEAD and HRS cohorts in Wave 3 and Wave 4 and onward, proxy respondents are not asked this question, and this variable is assigned special missing .p. Starting in Wave 4, respondents residing in nursing homes are not asked this question, and this variable is assigned special missing .h. This question is not asked at all in the AHEAD cohort in Wave 2, so this variable is assigned special missing .q in Wave 2. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, .m, respectively. RwJENJWRKA is set to plain missing (.) for respondents who did not respond to the current wave.

SwJENJWRKA indicate how much the current wave's spouse agrees that they really enjoy going to work, and are taken from the spouse's values to RwJENJWRKA. In addition to the special missing codes used in RwJENJWRKA, SwJENJWRKA employs two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Respondents are not asked how much they agree that they enjoy going to work in Wave 1. This question starts in the HRS cohort in Wave 2. This question is not asked at all in the AHEAD cohort in Wave 2.

In Wave 1 and starting in the HRS cohort in Wave 3, employed and self-employed respondents are asked the same question, whereas employed and self-employed respondents are asked this question separately in the HRS cohort in Wave 2 and the AHEAD cohort in Wave 3.

In the HRS cohort in Wave 2 and starting in Wave 9, the respondent is given the option to say that the statement does not apply.

In the AHEAD cohort in Wave 3, this question is not asked if the respondent worked less than 520 hours per year. Starting in Wave 7, respondents who work 200 or fewer hours during the year are not asked this question.

In the AHEAD and HRS cohorts in Wave 3 and Wave 4 and onward, this question is not asked if the interview is completed by proxy.

Starting in Wave 4, this question is not asked if the respondent lives in a nursing home.

### How Constructed:

RwJPROMYNGA and RwJOLDRETA indicate how much the respondent agrees with specific statements about their current job. RwJPROMYNGA indicates how much the respondent agrees that, in decisions about promotion, their current employer gives younger people preference over older people. RwJOLDRETA indicates how much the respondent agrees that their current co-workers make older workers feel that they ought to retire before age 65. These variables are coded as follows: 1.strongly agree, 2.agree, 3.disagree, 4.strongly disagree. If the respondents are self-employed, they are not asked about promotion decisions or co-workers pressuring older workers to retire and RwJPROMYNGA and RwJOLDRETA are assigned special missing .s. If the respondents are not working for pay, RwJPROMYNGA and RwJOLDRETA are assigned special missing .w. In the HRS cohort in Wave 2 and starting in Wave 9, if the respondent says that the statement does not apply, then these variables are assigned special missing .n. In the AHEAD and HRS cohorts in Wave 3 and Wave 4 and onward, proxy respondents are not asked these questions, and these variables are assigned

special missing .p. Starting in Wave 4, respondents residing in nursing homes are not asked these questions, and these variables are assigned special missing .h. In Wave 7 and onward, these variables are assigned special missing .f if the respondent is not asked these questions because they work 200 or fewer hours during the year. These questions are not asked at all in the AHEAD cohort in Wave 2, so these variables are assigned special missing .q in Wave 2. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, .m, respectively. RwJPROMYNGA and RwJOLDRETA are set to plain missing (.) for respondents who did not respond to the current wave.

SwJPROMYNGA and SwJOLDRETA indicate how much the current wave's spouse agrees with specific statements about their job, and are taken from the spouse's values to RwJPROMYNGA and RwJOLDRETA. In addition to the special missing codes used in RwJPROMYNGA and RwJOLDRETA, SwJPROMYNGA and SwJOLDRETA employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

In Wave 1 and starting in the HRS cohort in Wave 3, employed and self-employed respondents are asked the same questions, whereas employed and self-employed respondents are asked these questions separately in the HRS cohort in Wave 2 and the AHEAD cohort in Wave 3.

These questions are not asked at all in the AHEAD cohort in Wave 2.

In the HRS cohort in Wave 2 and starting in Wave 9, the respondent is given the option to say that the statement does not apply.

In the AHEAD and HRS cohorts in Wave 3 and Wave 4 and onward, these questions are not asked if the interview is completed by proxy.

Starting in Wave 4, these questions are not asked if the respondent lives in a nursing home.

Starting in Wave 7, respondents who work 200 or fewer hours during the year are not asked these questions.

## HRS Variables Used:

Wave 1:	
V2717	f2:any wrk for pay :imp

## How Constructed:

The HRS asks all respondents who report working for pay how many workers work for their company or organization at all locations. `RwCSIZE` is the number of employees that work for the respondent's company or organization at all locations. In Waves 1 through 10, if the respondent answers that they don't know the number of employees at all locations, then they are asked if it's fewer than 5, 5 to 14, 15 to 24, 25 to 99, 100 to 499, or 500 or more. Starting in Wave 11, if the respondent answers that they don't know the number of employees at all locations, then they are asked if it's fewer than 5, 5 to 14, 15 to 24, 25 to 49, 50 to 99, 100 to 499, or 500 or more. The following values are assigned based on these answers: 3 (fewer than 5), 10 (5-14), 20 (15-24), 37 (25-49), 62 (25-99), 75 (50 to 99), 300 (100-499), 500 (500 or more). `RwFCSIZE` is a flag variable indicating whether the value in `RwCSIZE` is taken from a direct answer, in which case `RwFCSIZE` is assigned a value of 0, or if the value in `RwCSIZE` is taken from the bracketed responses, in which case `RwFCSIZE` is assigned a value of 1. If the respondent reports that there is only one location for the company or organization, then the total number of employees in the company is assigned the number of employees at the respondent's location. In Wave 1, there was an error in the skip pattern and some people were asked the number of employees at their location, but not asked the number of employees at all locations, so `RwCSIZE` and `RwFCSIZE` are assigned special missing .e. Starting in the HRS cohort in Wave 2, if a respondent did not change companies and jobs, then the question is not asked again, so the value of `RwCSIZE` and `RwFCSIZE` are carried forward from the previous wave. If the respondent is self-employed, `RwCSIZE` and `RwFCSIZE` are assigned a special missing .s. If the respondent is not working for pay, `RwCSIZE` and `RwFCSIZE` are assigned a special missing .w. Starting in Wave 6, these variables are assigned a special missing .n if the respondent resides in a nursing home. In the HRS cohort in Wave 2, `RwCSIZE` and `RwFCSIZE` are assigned special missing .t if the respondent reports that all locations have thousands of employees. In the HRS and AHEAD cohorts in Wave 3, `RwCSIZE` and `RwFCSIZE` are assigned special missing .o if the respondent reports the company size as "other". This question is not asked at all in the AHEAD cohort in Wave 2, and so `RwCSIZE` and `RwFCSIZE` are assigned special missing .q in Wave 2. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, .m, respectively. `RwCSIZE` and `RwFCSIZE` are set to plain missing (.) for respondents who did not respond to the current wave.

`SwCSIZE` and `SwFCSIZE` indicate the number of employees for the current wave's spouse's total company or organization and a flag variable and their values are taken from the spouse's values to `RwCSIZE` and `RwFCSIZE`. In addition to the special missing codes used in `RwCSIZE` and `RwFCSIZE`, `SwCSIZE` and `SwFCSIZE` employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

The minimum and maximum values allowed changes by wave. In Waves 1 through 3, the minimum number of employees allowed is 1 for the size of the respondent's company. Starting in Wave 4, respondents are allowed to report a value of 0 for the size of the respondent's company. The maximum value for the size

of the respondent's total company is 999,979 in Wave 1, 9,999,994 in Waves 2, 3, and 4, 99,996 in the AHEAD cohort in Wave 3, and 9,999,996 in Wave 5. Starting in Wave 6, the possible maximum values for the size of the respondent's total company is not listed.

In Waves 1 through 10, if the respondent answers that they don't know the number of employees at all locations, then they are asked if it's fewer than 5, 5 to 14, 15 to 24, 25 to 99, 100 to 499, or 500 or more. Starting in Wave 11, they are asked if it's fewer than 5, 5 to 14, 15 to 24, 25 to 49, 50 to 99, 100 to 499, or 500 or more.

In the HRS cohort in Wave 2, the respondent can report "thousands" of employees for the entire company. In HRS Wave 3 and AHEAD Wave 2, the respondent can report "other" for the size of the entire company.

In Waves 2 through 4, Waves 6 through 8, Wave 10, and Wave 11, the respondent is not asked these questions if they had the same employer as in the previous wave.

## How Constructed:

RwJGOVTEMP indicates whether the respondent currently works for the government at the federal, state, or local level, which includes teachers and other service workers who are on the payrolls of local government, school district, and other agencies of state and local government. RwJGOVTEMP is coded as 0 if the respondent reports not working for the government. RwJGOVTEMP is coded as 1 if the respondent reports working for the government at any level. Starting in Wave 9, if the respondent works for the same employer as in the last wave, then their value for RwJGOVTEMP in the previous wave is carried forward. RwJGOVTEMP is assigned special missing .w if the respondent is not working in the current wave. RwJGOVTEMP is assigned special missing .s if the respondent is self-employed in the current wave. RwJGOVTEMP is assigned special missing .f if the respondent is not asked this question because they work 200 or fewer hours during the year. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, .m, respectively. RwJGOVTEMP is set to plain missing (.) for respondents who did not respond to the current wave.

SwJGOVTEMP indicates whether the current wave's spouse currently works for the government, and is taken from the spouse's values to RwJGOVTEMP. In addition to the special missing codes used in RwJGOVTEMP, SwJGOVTEMP employs two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwJGOVTTYP indicates which level of government the respondent is currently working for. RwJGOVTTYP is coded as follows: 1.federal, 2.state, 3.local (county, city, township). Starting in Wave 9, if the respondent works for the same employer as in the last wave, then their value for RwJGOVTTYP in the

previous wave is carried forward. RwJGOVTTYP is assigned special missing .g if the respondent does not currently work for the government. RwJGOVTTYP is assigned special missing .w if the respondent is not working in the current wave. RwJGOVTTYP is assigned special missing .s if the respondent is self-employed in the current wave. RwJGOVTTYP is assigned special missing .f if the respondent is not asked this question because they work 200 or fewer hours during the year. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, .m, respectively. RwJGOVTTYP is set to plain missing (.) for respondents who did not respond to the current wave.

SwJGOVTTYP indicates which level of government the current wave's spouse currently works for, and is taken from the spouse's values to RwJGOVTTYP. In addition to the special missing codes used in RwJGOVTTYP, SwJGOVTTYP employs two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

The respondent is not asked about currently working for the government or which branch they work for in Waves 1 through 7. These questions begin in Wave 8.

Starting in Wave 9, these questions are skipped if the respondent reports working for the same employer as in the previous wave.

## HRS Variables Used:

### Wave 8:

KJ020	working for pay
KJ021	work for someone else/slf-employed
KJ703	current wave marginally employed
KJ720	government employee
KJ721	employee of fed,state,local gov

### Wave 9:

LJ020	working for pay
LJ021	work for someone else/slf-employed
LJ045	still working prev employer
LJ703	current wave marginally employed
LJ720	government employee
LJ721	employee of fed,state,local gov

### Wave 10:

MJ020	working for pay
MJ021	work for someone else/slf-employed
MJ045	still working prev employer
MJ703	current wave marginally employed
MJ720	government employee
MJ721	employee of fed,state,local gov

### Wave 11:

NJ020	working for pay
NJ021	work for someone else/slf-employed
NJ045	still working prev employer
NJ703	current wave marginally employed
NJ720	government employee
NJ721	employee of fed,state,local gov

### Wave 12:

OJ020	working for pay
OJ021	work for someone else/slf-employed
OJ045	still working prev employer
OJ703	current wave marginally employed
OJ720	government employee
OJ721	employee of fed,state,local gov

### Wave 13:

PJ020	working for pay
PJ021	work for someone else/slf-employed
PJ045	still working prev employer

PJ703 current wave marginally employed  
PJ720 government employee  
PJ721 employee of fed,state,local gov

Wave 14:

QJ020 working for pay  
QJ021 work for someone else/slf-employed  
QJ045 still working prev employer  
QJ703 current wave marginally employed  
QJ720 government employee  
QJ721 employee of fed,state,local gov

Wave 15:

RJ020 working for pay  
RJ021 work for someone else/slf-employed  
RJ045 still working prev employer  
RJ703 current wave marginally employed  
RJ720 government employee  
RJ721 employee of fed,state,local gov

### How Constructed:

RwJPLEAVE indicates the respondent's number of days of paid leave at their current job. The respondent is asked how many weeks of paid vacation they get each year, but are allowed to answer with the amount of days, weeks, hours, or months. To transform responses into the number of days, responses in weeks are multiplied by 5 (assuming a 5 day work week), responses in hours are divided by 8 (assuming a 8 hour workday), and responses in months are multiplied by 21.6 (assuming 21.6 average work days per month). In Wave 14 and onward, respondents are allowed to report only the number of weeks of paid vacation they get, which is converted into number of days multiplying the value by 5, as per the criteria aforementioned. If the respondent is not working for pay, RwJPLEAVE is assigned special missing .w. If the respondent is self-employed, RwJPLEAVE is assigned special missing .s. This question is not asked in the AHEAD cohort in Wave 2, so RwJPLEAVE is assigned special missing .q in Wave 2. In Waves 2 through 10, Wave 12, and Wave 13, special missing .o is assigned if the respondent reported having another amount of paid leave or are using another (unspecified) unit of time. In Waves 10 through 13, respondents can report that sick and vacation time are combined, in which case RwJPLEAVE is assigned special missing .c. In Wave 14, respondents who reported a number of weeks greater than 52 are assigned special missing .i. Don't know, refused, or missing responses are assigned special missing values .d, .r, .m, respectively. RwJPLEAVE is set to plain missing (.) for respondents who did not respond to the current wave.

SwJPLEAVE is the number of days of paid leave for the respondent's spouse in the current wave, and is taken from the spouse's values to RwJPLEAVE. In addition to the special missing codes used in RwJPLEAVE, SwJPLEAVE employs two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave by their spouse is not interviewed.

RwJPSICK indicates the respondent's number of days of paid sick leave at their current job. The number of days of paid sick leave can only be reported as the number of days, and not another unit of time. If the respondent is not working for pay, RwJPSICK is assigned special missing .w. If the respondent is self-employed, RwJPSICK is assigned special missing .s. Special missing .n is assigned if the respondent reported having no set number of days of paid sick leave. In Waves 1 through 3, special missing .o is assigned if the respondent reported having another amount of paid sick leave. This question is not asked in the AHEAD cohort in Wave 2, so RwJPSICK is assigned special missing .q in Wave 2. In Waves 2 through 4 and Waves 6 and onward, respondents are not asked about the number of days of paid sick leave if the respondent did not change jobs between waves, and RwJPSICK is assigned special missing .j. In Waves 7 and onward, respondents are not asked this question if they work less than or equal to ten hours per week and less than or equal to twenty weeks per year, and RwJPSICK is assigned special missing .f. In Waves 10 through 13, if the respondent reported that their sick and vacation time are combined, RwJPSICK is assigned special missing .c. Don't know, refused, or missing responses are assigned special missing values .d, .r, .m, respectively. RwJPSICK is set to plain missing (.) for respondents who did not respond to the current wave.

SwJPSICK is the number of days of paid sick leave for the respondent's spouse in the current wave, and is taken from the spouse's values to RwJPSICK. In addition to the special missing codes used in RwJPSICK, SwJPSICK employs two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave by their spouse is not interviewed.

RwJPDYSA indicates the respondent's total number of paid days off, and is the sum of paid leave and paid sick leave at their current job (i.e. the sum of RwJPLEAVE and RwJPSICK). It is calculated only if there is a numeric value for both component variables. In Waves 10 through 13, if the respondent reports that

sick and vacation time are combined when asked about vacation time, then the respondent is asked for the number of weeks of paid time off each year, but are allowed to answer with the amount of days, weeks, hours, or months. To transform responses into the number of days, responses in weeks are multiplied by 5 (assuming a 5 day work week), responses in hours are divided by 8 (assuming a 8 hour workday), and responses in months are multiplied by 21.6 (assuming 21.6 average work days per month) and assigned to RwJPDYSA. If the respondent is not working for pay, RwJPDYSA is assigned special missing .w. If the respondent is self-employed, RwJPDYSA is assigned special missing .s. Special missing .n is assigned if the respondent reported having no set number of days of paid sick leave. In Wave 1, special missing .o is assigned if the respondent reported having another amount of paid sick leave. In Waves 2 and 3, special missing .o is assigned if the respondent reported having another amount of paid leave or paid sick leave. In Waves 4 through 10, Wave 12, and Wave 13, special missing .o is assigned if the respondent reported having another amount of paid leave or are using another (unspecified) unit of time. These questions are not asked in the AHEAD cohort in Wave 2, so RwJPDYSA is assigned special missing .q in Wave 2. In Waves 2 through 4 and Waves 6 and onward, respondents are not asked about the number of days of paid sick leave if the respondent did not change jobs between waves, and RwJPDYSA is assigned special missing .j. In Waves 7 and onward, RwJPDYSA is assigned special missing .f if respondents are not asked about the number of sick days because they work less than or equal to ten hours per week and less than or equal to twenty weeks per year. Don't know, refused, or missing responses are assigned special missing values .d, .r, .m, respectively. RwJPDYSA is set to plain missing (.) for respondents who did not respond to the current wave.

SwJPDYSA is the number of days of paid leave for the respondent's spouse in the current wave, and is taken from the spouse's values to RwJPDYSA. In addition to the special missing codes used in RwJPDYSA, SwJPDYSA employs two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave by their spouse is not interviewed.

## Cross Wave Differences in HRS

At the AHEAD cohort in Wave 2, respondents are not asked about the number of days of paid leave or paid sick leave at their current job.

In Waves 2 through 4, respondents are not asked about the number of days of paid sick leave if the respondent did not change employers after the previous interview. At Wave 5, this question was asked to respondents that did not change employers after the previous interview. Starting again at Wave 6, this question is not asked if the respondent did not change employers after the previous interview.

Starting at Wave 7, respondents are not asked about the number of days of paid sick leave at their current job if they work less than or equal to ten hours per week and less than or equal to twenty weeks per year.

In Waves 10 through 13, respondents can report that their sick and vacation time are combined, in which case they are asked for the number of weeks of paid time off they get each year (but can report the amount in days, weeks, hours, or months).

The units of time the respondent can use to report the number of days of paid leave (vacation) varies across waves. In all waves, the respondent can report the number of weeks. Starting in HRS Wave 2, the respondent can report the number of days or weeks. Starting in HRS Wave 3, the respondent can report the number of months, days, or weeks. In Waves 4, 5, and starting in Wave 8, the respondent can also report the number of hours. Starting in Wave 10, the respondent can report total paid time off in days, weeks, hours, and months, but in Wave 12 the respondent cannot report their paid time off in hours. In Wave 14 and onward the respondent can only report their paid time off in weeks.

## How Constructed:

RwJSPRVS indicates whether the respondent makes decisions about the pay and promotion of others in their current job. RwJSPRVS is coded as 0 if the respondent does not make decisions about the pay and promotion of others in their current job. RwJSPRVS is coded as 1 if the respondent does make decisions about the pay and promotion of others in their current job. In Waves 2 through 5, 7, 8, 10 through 12, 14 and 15, if the respondent works for the same employer as in the last wave, then their value for RwJSPRVS in the previous wave is carried forward. RwJSPRVS is assigned special missing .w if the respondent is not working in the current wave. RwJSPRVS is assigned special missing .s if the respondent is self-employed in the current wave. Starting in the HRS cohort in Wave 2, this question is not asked to proxy respondents and RwJSPRVS is assigned special missing .p. Starting in Wave 4, respondents living in nursing homes are not asked this question and RwJSPRVS is assigned special missing .h. Only in the AHEAD cohort in Wave 3, this question is not asked if the respondent worked less than 520 hours during the year, and so RwJSPRVS is assigned a special missing .f. This question is not asked at all in the AHEAD cohort in Wave 2, so RwJSPRVS is assigned special missing .q in Wave 2. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, .m, respectively. RwJSPRVS is set to plain missing (.) for respondents who did not respond to the current wave.

SwJSPRVS indicates whether the current wave's spouse makes decisions about the pay and promotion of others in their current job, and is taken from the spouse's values to RwJSPRVS. In addition to the special missing codes used in RwJSPRVS, SwJSPRVS employs two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwJSPRVSNI indicates the number of people the respondent makes decisions about the pay and promotion for in their work. If the respondent reports making decisions about the pay and promotion of others in their current job, they are asked how many people they make those decisions for. RwJSPRVSNI takes the value reported, and takes a value of 0 if the respondent does not make those decisions for anyone. In Waves 1 through 8, if the respondent reports making decisions about the pay and promotion for 95 or more people, then RwJSPRVSNI is assigned a special missing value .z. In Waves 2 through 5, 7, 8, 10 through 12, 14 and 15, if the respondent works for the same employer as in the last wave, then their value for RwJSPRVSNI in the previous wave is carried forward. RwJSPRVSNI is assigned special missing .w if the respondent is not working in the current wave. RwJSPRVSNI is assigned special missing .s if the respondent is self-employed in the current wave. Starting in the HRS cohort in Wave 2, this question is not asked to proxy respondents and RwJSPRVSNI is assigned special missing .p. Starting in Wave 4, respondents living in nursing homes are not asked this question and RwJSPRVSNI is assigned special missing .h. Only in the AHEAD cohort in Wave 3, this question is not asked if the respondent worked less than 520 hours during the year, and so RwJSPRVSNI is assigned a special missing .f. This question is not asked at all in the AHEAD cohort in Wave 2, so RwJSPRVSNI is assigned special missing .q in Wave 2. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, .m, respectively. RwJSPRVSNI is set to plain missing (.) for respondents who did not respond to the current wave.

SwJSPRVSNI indicates the number of people the current wave's spouse makes decisions about the pay and promotion for in their work, and is taken from the spouse's values to RwJSPRVSNI. In addition to the special missing codes used in RwJSPRVSNI, SwJSPRVSNI employs two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

In Wave 1, respondents who report making pay and promotion decisions for 95 or more people are given a value of 95 in the original HRS data and are assigned special missing .z in RwJSPRVSN. In all other waves, the HRS does not group values.

These questions are not asked at all in the AHEAD cohort in Wave 2.

In the HRS cohort in Wave 2, Waves 3-5, 7-8, 10-12, 14, and 15 respondents are not asked these questions about supervising other people if they didn't change employers or jobs.

In the AHEAD cohort in Wave 3, these questions are not asked if the respondent worked less than 520 hours per year.

In Waves 3 and onward, these questions are not asked if the interview is completed by proxy.

Starting in Wave 4, these questions are not asked if the respondent lives in a nursing home.

### How Constructed:

RwLOOKNWK indicates whether the respondent is looking for a different job, and is asked to respondents who are currently working. RwLOOKNWK is assigned a value of 0 if the respondent is not looking for a different job, and is assigned a value of 1 if the respondent is looking for a different job. This question is not asked if the respondent is not currently working, and so RwLOOKNWK is assigned special missing .w. Starting in the HRS cohort in Wave 2, this question is not asked if the respondent is self-employed or if the interview is conducted by proxy, in which case RwLOOKNWK is assigned special missing .s and .p, respectively. In the AHEAD cohort in Wave 3, this question is not asked if the respondent worked less than 520 hours per year, and so RwLOOKNWK is assigned special missing .f in this wave. Starting in Wave 4, this question is not asked if the respondent resides in a nursing home, and so RwLOOKNWK is assigned special missing .h. This question is not asked at all in the AHEAD cohort in Wave 2, so RwLOOKNWK is assigned special missing .q in Wave 2. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, .m, respectively. RwLOOKNWK is set to plain missing (.) for respondents who did not respond to the current wave.

SwLOOKNWK indicates whether the current wave's spouse is looking for a different job, and is taken from the spouse's values to RwLOOKNWK. In addition to the special missing codes used in RwLOOKNWK, SwLOOKNWK employs two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwLOOKNWKPF indicates whether the respondent is looking for part-time or full-time work in a different job if they are currently working. RwLOOKNWKPF is coded as follows: 1.part-time, 2.full-time, 3.either kind. RwLOOKNWKSD indicates whether the respondent is looking for the same kind of work they are doing now or something different in a different job if they are currently working. RwLOOKNWKSD is coded as follows: 1.same, 2.different, 3.either or both. These questions are not asked if the respondent is not looking for a different job, and so RwLOOKNWKPF and RwLOOKNWKSD are assigned special missing .l. These questions are not asked if the respondent is not currently working, and so RwLOOKNWKPF and RwLOOKNWKSD

are assigned special missing .w. Starting in the HRS cohort in Wave 2, these questions are not asked if the respondent is self-employed or if the interview is conducted by proxy, in which case RwLOOKNWKPF and RwLOOKNWKSD are assigned special missing .s and .p, respectively. In the AHEAD cohort in Wave 3, these questions are not asked if the respondent worked less than 520 hours per year, and so RwLOOKNWKPF and RwLOOKNWKSD are assigned special missing .f in this wave. Starting in Wave 4, these questions are not asked if the respondent resides in a nursing home, and so RwLOOKNWKPF and RwLOOKNWKSD are assigned special missing .h. These questions are not asked at all in the AHEAD cohort in Wave 2, so RwLOOKNWKPF and RwLOOKNWKSD are assigned special missing .q in Wave 2. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, .m, respectively. RwLOOKNWKPF and RwLOOKNWKSD are set to plain missing (.) for respondents who did not respond to the current wave.

SwLOOKNWKPF and SwLOOKNWKSD indicate whether the current wave's spouse is looking for part-time or full-time employment and for the same or different work in a different job, and are taken from the spouse's values to RwLOOKNWKPF and RwLOOKNWKSD. In addition to the special missing codes used in RwLOOKNWKPF and RwLOOKNWKSD, SwLOOKNWKPF and SwLOOKNWKSD employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

### Cross Wave Differences in HRS

These questions are not asked if the respondent is self-employed or if the interview is by proxy starting in the HRS cohort in Wave 2.

These questions are not asked at all for the AHEAD cohort in Wave 2.

Only in the AHEAD cohort in Wave 3, these questions are not asked if the respondent worked less than 520 hours per year.

Starting in Wave 4, these questions are not asked if the respondent resides in a nursing home.

## How Constructed:

Respondents who are not currently working are asked whether they have been doing anything to find work during the last four weeks. Please see RwUNEMP in the RAND HRS Longitudinal File to determine whether the respondent is currently unemployed and looking for work.

RwLOOKWRKPF indicates whether the respondent is looking for part-time or full-time work if they are not currently working. RwLOOKWRKPF is coded as follows: 1.part-time, 2.full-time, 3.either kind. RwLOOKWRKSD indicates whether the respondent is looking for the same kind of work they did before or something different. RwLOOKWRKSD is coded as follows: 1.same, 2.different, 3.either or both. These questions are not asked if the respondent is currently working, and so RwLOOKWRKPF and RwLOOKWRKSD are assigned special missing .w. These questions are not asked if the respondent did not do anything to find working during the last four weeks, and so RwLOOKWRKPF and RwLOOKWRKSD are assigned special missing .l. In Wave 1, these questions are not asked if the respondent last worked 20 or more years ago, and so these variables are assigned special missing .t. In Wave 1 and the AHEAD cohort in Wave 3, if the respondent never worked they are not asked whether they were looking for work, and so these variables are assigned special missing .n in Waves 1 and 3. Starting in Wave 5, these questions are not asked if the respondent is residing in a nursing home, and RwLOOKWRKPF and RwLOOKWRKSD are assigned special missing .h. In the HRS cohort in Wave 2, the AHEAD cohort in Wave 3, and starting again in Wave 6, proxy respondents are not asked these questions, and RwLOOKWRKPF and RwLOOKWRKSD are assigned special missing .p. These questions are not asked at all in the AHEAD cohort in Wave 2, so RwLOOKWRKPF and RwLOOKWRKSD are assigned special missing .q in Wave 2. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, .m, respectively. RwLOOKWRKPF and RwLOOKWRKSD are set to plain missing (.) for respondents who did not respond to the current wave.

SwLOOKWRKPF and SwLOOKWRKSD indicate whether the current wave's spouse is looking for part-time or full-time employment and for the same or different work if they are not currently working, and are taken from the spouse's values to RwLOOKWRKPF and RwLOOKWRKSD. In addition to the special missing codes used in RwLOOKWRKPF and RwLOOKWRKSD, SwLOOKWRKPF and SwLOOKWRKSD employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

In Wave 1, respondents are not asked these questions, including if they were looking for work, if they never worked for pay for more than a few months or last worked before 1972 (more than 20 years ago). In the AHEAD cohort in Wave 3, respondents who report never working are not asked if they were looking for work or the potential characteristics of the work they would be looking for.

In the HRS cohort in Wave 2, the AHEAD cohort in Wave 3, and starting again in Wave 6, these questions are not asked if the interview is completed by proxy.

Starting in Wave 5, these questions are not asked if the respondent lives in a nursing home.

### How Constructed:

For respondents who are currently working and report looking for a new job that is different from their current job, RwjRSWLEAV indicates how the respondent would want a new job to be different from their current job. The respondent is asked how a new job would be different, and if they mention multiple reasons, then the first reason is reported. RwjRSWLEAV is coded as follows: 1.job characteristics, 2.too tiring/stressful, 3.progress career, 4.losing job, 5.personal, other. A value of 1 is assigned if the respondent would like to go to self-employment, return to a previous job type, look for a job that they have done as a hobby or "second" job, work at home, or they would want a new job with fewer/more hours, a different work schedule, that is more interesting/challenging, has a different work environment, or if they give a general type of work different from their current/last job, want anything but this type of work (clearly dislikes current/last job and seeks a change because of this), or give a similar type of work on a somewhat different product or in a somewhat different industry. A value of 2 is assigned if they would like a new job that is less physically demanding, less stressful, or with less responsibility. A value of 3 is assigned if they would like a new job with better pay/benefits, a promotion or more responsibility, or if they provide a specific job title that is different from their current/last job. A value of 4 is assigned if they would like a new job because jobs similar to the respondent's are not available at this time or in this area. A value of 5 is assigned if they would take any job because they need/want work and don't care what type it is, or would like a new job for another reason. Special missing .w is assigned if the respondent is currently not working. Special missing .l is assigned if the respondent is working but not looking for a new job. Special missing .k is assigned if the respondent is working and looking for a new job but they are looking for the same kind of work they are currently doing. Starting in the HRS cohort in Wave 2, this question is not asked if the respondent is self-employed or if the interview is conducted by proxy, in which case RwjRSWLEAV is assigned special missing .s and .p, respectively. In the AHEAD cohort in Wave 3, this question is not asked if the respondent worked less than 520 hours per year, and so RwjRSWLEAV is assigned special missing .f in this wave. Starting in Wave 4, this question is not asked if the respondent resides in a nursing home, and so RwjRSWLEAV is assigned special missing .h. This question is not asked at all in the AHEAD cohort in Wave 2, so RwjRSWLEAV is assigned special missing .q in Wave 2. Don't know, refused, or missing responses are assigned special missing values .d, .r, .m, respectively. RwjRSWLEAV is assigned blank missing (.) if the respondent did not participate in the current wave.

SwJRSWLEAV indicates how the current wave's spouse would want a new job to be different if they are working and looking for a new and different kind of job, and its values are taken from RwJRSWLEAV. In addition to the special missing codes used in RwJRSWLEAV, if the respondent is not designated as coupled in the current wave and assumed to be single, a special missing value of .u is used. Also, if the respondent is not designated as coupled in the current wave but reports being married, a special missing value of .v is used.

## Cross Wave Differences in HRS

These questions are not asked if the respondent is self-employed or if the interview is by proxy starting in the HRS cohort in Wave 2.

These questions are not asked at all for the AHEAD cohort in Wave 2.

Only in the AHEAD cohort in Wave 3, these questions are not asked if the respondent worked less than 520 hours per year.

Starting in Wave 4, these questions are not asked if the respondent resides in a nursing home.

RwJRSWLEAV is not currently available for Wave 15, but will be incorporated with the next data release.

### How Constructed:

RwJRSLEFT indicates the respondent's reason for stopping working at their previous job if they are no longer working. This variable incorporates responses from several questions. If the respondent reported being self-employed in the previous wave and employed by someone else in the current wave, then the respondent is asked why they stopped being self-employed. If the respondent reported leaving their employer from the previous wave, then the respondent is asked why they left that employer. If the respondent reported leaving their position from the previous wave, then the respondent is asked why they left that position. The first reason given for each of these questions is used for the assignment of RwJRSLEFT. In addition, the respondent's first self-reported current job status is used to assign certain values to RwJRSLEFT when they are not asked the reasons for leaving their previous job.

RwJRSLEFT is coded as follows: 1.retired, 2.fired, 3.laid off, 4.health reason, 5.family reason, 6.new job, 7.quit, and 8.other. A value of 1 is assigned if the respondent chose to retire, reported being offered an early retirement incentive/offer, or handed over their business responsibilities to other family members. A value of 1 is also assigned if no reasons were asked and the respondent reported being retired as their job status. A value of 3 is assigned if they stopped working because the company moved or sold, or if they were laid off/let go. A value of 4 is assigned if they stopped working because of their own ill health or disability. A value of 4 is also assigned if no reasons were asked and the respondent reported being disabled as their job status. A value of 5 is assigned if they stopped working to spend more time with family, care for children, or as the result of a divorce/separation. A value of 5 is also assigned if no reasons were asked and the respondent reported being a homemaker as their job status. A value of 6 is assigned if they stopped working to start their own business, get more training, work in a family business, join the military, or if they or their spouse were transferred. A value of 7 is assigned if they stopped working because they quit their job. A value of 8 is assigned if they stopped working because they moved to a different area, they sold or closed their business, they lived too far from work, they wanted to travel, it was financially advantageous not to work, their job required too much time, pension rules changed, as the result of a strike, or for another reason. A value of 8 is also assigned if no reasons were asked and the respondent reported having an "other" job status. Please note that the options provided in HRS do not allow for the assignment of 2 for RwJRSLEFT. Responses from previous waves are carried forward for respondents with missing values. Special missing .w is assigned if the respondent is currently working. In Wave 1, special missing .x is assigned if these questions were skipped because the respondent reported never working or last working before 1972. Starting in the HRS cohort in Wave 2, special missing .c is assigned if the respondent denies that they were working at the previous wave. Starting in Wave 7, RwJRSLEFT is assigned special missing .b if the respondent denies leaving their previous job. This question is not asked in the AHEAD cohort in Wave 2, so RwJRSLEFT is

assigned special missing .q in Wave 2. Don't know, refused, or missing responses are assigned special missing values .d, .r, .m, respectively. RwJRSLEFT is assigned blank missing (.) if the respondent did not participate in the current wave.

SwJRSLEFT indicates the current wave's spouse's reason for stopping working at their previous job, and its values are taken from RwJRSLEFT. In addition to the special missing codes used in RwJRSLEFT, if the respondent is not designated as coupled in the current wave and assumed to be single, a special missing value of .u is used. Also, if the respondent is not designated as coupled in the current wave but reports being married, a special missing value of .v is used.

## Cross Wave Differences in HRS

These questions are asked a varying number of times to slightly different subsets of respondents over time. In Wave 1, two separate questions are asked to those who left their employer and to those who stopped being self-employed. In the HRS cohort in Wave 2, nine separate questions are asked based on those who stopped being self-employed, left their employer, or left their job and whether they are currently employed by someone else, self-employed, or neither. In Wave 3, five separate questions are asked based on those who stopped being self-employed or left their employer and whether they are currently employed by someone else, self-employed, or neither. In Wave 4, four separate questions are asked based on those who left their employer or left their job and whether they are currently working or not. In Wave 5, four separate questions are asked to those who left their employer or left their job and whether they are currently working or not. Starting in Wave 6, three separate questions are asked to those who left their employer and are currently working, to those who left their job and are currently working, and to those who left their employer and are not currently working.

Only in Wave 1, respondents who reported never working or last working before 1972 were not asked the reasons for leaving their previous job.

In the AHEAD cohort in Wave 2, respondents are not asked about the reason for stopping working.

Starting in the HRS sample in Wave 2, respondents can deny working at the previous wave.

Starting in Wave 7, respondents can deny leaving their previous job.

## How Constructed:

RwSYSTO1, RwSYSTO2, and RwSYSTO3 are the respondent's first, second, and third systolic blood pressure readings. RwSYSTO is the average of the second and third systolic blood pressure readings. If the third systolic blood pressure reading is unavailable, then RwSYSTO is the average of the first and second systolic blood pressure readings. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, .m, respectively. Special missing .i is assigned to readings with a value of 300 or more. Special missing .x is assigned if the respondent tried to do the test but was unable to complete it. Special missing .n is assigned if the respondent did not complete the blood pressure measurement due to a variety of reasons, including safety concerns, or the respondent did not understand the

instructions. Special missing .s is employed if the physical measure questions were skipped because the respondent was not selected for a face-to-face interview, was not selected for an enhanced face-to-face interview, or was living in the nursing home. Plain missing (.) is employed for respondents who did not respond to the current wave.

SwSYSTO1, SwSYSTO2, SwSYSTO3 and SwSYSTO indicate the first, second, third and the average of the second and third systolic blood pressure measurements of the current wave's spouse. The spouse variables are taken from the corresponding respondent variables. In addition to the special missing codes employed by RwsYSTO1, RwsYSTO2, RwsYSTO3 and RwsYSTO, SwSYSTO1, SwSYSTO2, SwSYSTO3 and SwSYSTO employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwDIASTO1, RwDIASTO2, RwDIASTO3 are the respondent's first, second, and third diastolic blood pressure readings. RwDIASTO is the average of the second and the third diastolic blood pressure readings. If the third diastolic blood pressure reading is unavailable, then RwDIASTO is the average of the first and second diastolic blood pressure readings. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, .m, respectively. Special missing .i is assigned to readings with a value of 200 or more. Special missing .x is assigned if the respondent tried to do the test but was unable to complete it. Special missing .n is assigned if the respondent did not complete the blood pressure measurement due to a variety of reasons, including safety concerns, or the respondent did not understand the instructions. Special missing .s is employed if the physical measure questions were skipped because the respondent was not selected for a face-to-face interview, was not selected for an enhanced face-to-face interview, or was living in the nursing home. Plain missing (.) is employed for respondents who did not respond to the current wave.

SwDIASTO1, SwDIASTO2, SwDIASTO3 and SwDIASTO indicate the first, second, third and the average of the second and third diastolic blood pressure readings of the current wave's spouse. The spouse variables are taken from the corresponding respondent variables. In addition to the special missing codes employed by RwDIASTO1, RwDIASTO2, RwDIASTO3, and RwDIASTO, SwDIASTO1, SwDIASTO2, SwDIASTO3 and SwDIASTO employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwPULSE1, RwPULSE2, and RwPULSE3 are the respondent's first, second, and third pulse reading. RwPULSE is the average of the second and the third pulse readings. If the third pulse reading is unavailable, then RwPULSE is the average of the first and second pulse readings. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, .m, respectively. Special missing .i is assigned to readings with a value of 160 or more. Special missing .x is assigned if the respondent tried to do the test but was unable to complete it. Special missing .n is assigned if the respondent did not complete the blood pressure measurement due to a variety of reasons, including safety concerns, or the respondent did not understand the instructions. Special missing .s is employed if the physical measure questions were skipped because the respondent was not selected for a face-to-face interview, was not selected for an enhanced face-to-face interview, or was living in the nursing home. Plain missing (.) is employed for respondents who did not respond to the current wave.

SwPULSE1, SwPULSE2, SwPULSE3 and SwPULSE indicate the first, second, third and the average of the second and third pulse readings for the current wave's spouse. The spouse variables are taken from the corresponding respondent variables. In addition to the special missing codes employed by RwPULSE1, RwPULSE2, RwPULSE3 and RwPULSE, SwPULSE1, SwPULSE2, SwPULSE3 and SwPULSE employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Please note that some extreme values may remain in these variables and have been left to the discretion of the user. It may be useful to reference the following document for further consideration: [Physical Measures And Biomarkers](#).

RwBPCOMP indicates whether the respondent is willing and able to complete the blood pressure tests. RwBPCOMP is coded as 1 if the respondent did not signal having a rash, a cast, edema in the arm, open sores or wounds, or a significant bruise in contact with the blood pressure cuff, the respondent understood the directions for the test, the respondent felt it would be safe to complete the test, and the respondent completed at least one blood pressure measurement. RwBPCOMP is coded as 0 if the

respondent had a rash, a cast, edema, open sores or wounds, or significant bruises in contact with the blood pressure cuff, the respondent did not understand the instructions, expressed safety concerns, or did not complete any blood pressure measurements. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, .m, respectively. Special missing .s is assigned if the physical measure questions were skipped because the respondent was not selected for a face-to-face interview, was not selected for an enhanced face-to-face interview, or was living in the nursing home. This measure is set to plain missing (.) for respondents who did not respond to the current wave.

SwBPCOMP indicates the respondent's current wave's spouse's ability to complete the blood pressure tests, and is taken from RwBPCOMP. In addition to the special missing codes employed by RwBPCOMP, SwBPCOMP employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwBLDPOS indicates the position the respondent was in for the blood pressure tests. RwBLDPOS is coded as follows: 1.standing, 2.sitting, and 3.lying down. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, .m, respectively. Special missing .n is assigned if the respondent did not complete the blood pressure measurement due to a variety of reasons, including safety concerns, or the respondent did not understand the instructions. Special missing .s is assigned if the physical measure questions were skipped because the respondent was not selected for a face-to-face interview, was not selected for an enhanced face-to-face interview, or was living in the nursing home. RwBLDPOS is set to plain missing (.) for respondents who did not respond to the current wave.

SwBLDPOS indicates the respondent's current wave's spouse's position for the blood pressure tests, and is taken from RwBLDPOS. In addition to the special missing codes employed by RwBLDPOS, SwBLDPOS employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwBPACT30 indicates whether the respondent has eaten, smoked, drunk alcohol, or done any vigorous exercise within the 30 minutes prior to completing the blood pressure test, which may affect the validity of the measurements. RwBPACT30 is assigned a 0 if the respondent has not done any of these activities in the last 30 minutes, and assigned a 1 if the respondent has done any of these activities in the last 30 minutes. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, .m, respectively. Special missing .n is assigned if the respondent did not complete at least one blood pressure measurement due to a variety of reasons, including safety concerns, or the respondent did not understand the instructions. Special missing .s is assigned if the physical measure questions were skipped because the respondent was not selected for a face-to-face interview, was not selected for an enhanced face-to-face interview, or was living in the nursing home. This measure is set to plain missing (.) for respondents who did not respond to the current wave.

SwBPACT30 indicates whether the respondent's current wave's spouse ate, smoked, drank alcohol, or did any vigorous activity in the last 30 minutes and its values take from RwBPACT30. In addition to the special missing codes employed by RwBPACT30, SwBPACT30 employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwBPARM indicates the arm used by the respondent for the blood pressure tests. RwBPARM is coded as follows: 1.left arm and 2.right arm. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, .m, respectively. Special missing .n is assigned if the respondent did not complete the blood pressure measurement due to a variety of reasons, including safety concerns, or the respondent did not understand the instructions. Special missing .s is assigned if the physical measure questions were skipped because the respondent was not selected for a face-to-face interview, was not selected for an enhanced face-to-face interview, or was living in the nursing home. RwBPARM is set to plain missing (.) for respondents who did not respond to the current wave.

SwBPARM indicates the respondent's current wave's spouse's arm used for the blood pressure tests, and is taken from RwBPARM. In addition to the special missing codes employed by RwBPARM, SwBPARM employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwBPCOMPL indicates the level of compliance displayed by the respondent during the blood pressure tests. RwBPCOMPL is coded as follows: 1.compliant if respondents are fully compliant, 2.justified non-compliant if their non-compliance is justified by illness, pain or other symptoms or discomfort and 3.unjustified non-compliant if their non-compliance is due to no obvious reason. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, .m, respectively. Special missing .n is assigned if the respondent did not complete the blood pressure measurement due to a variety of reasons, including safety concerns, or the respondent did not understand the instructions. Special missing .s is assigned if the physical measure questions were skipped because the respondent was not selected for a face-to-face interview, was not selected for an enhanced face-to-face interview, or was living in the nursing home. RwBPCOMPL is set to plain missing (.) for respondents who did not respond to the current wave.

SwBPCOMPL indicates the respondent's current wave's spouse's compliance level during the blood pressure tests, and is taken from RwBPCOMPL. In addition to the special missing codes employed by RwBPCOMPL, SwBPCOMPL employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

These measurements are performed starting in Wave 8.

Starting in Wave 12, there are additional screening questions asking about the condition of the respondent's arms and their understanding of the directions and feelings of safety in completing the tests which determine whether the respondent participates in the blood pressure tests.

Respondents are no longer asked about having eaten, smoked, drunk alcohol, or done vigorous physical activity in the last 30 minutes and interviewers are no longer asked to describe the respondent's compliance starting in Wave 12.

No physical measures were collected in Wave 15 as a result of the COVID-19 pandemic.

## HRS Variables Used:

### Wave 8:

KA028	r in nursing home
KI800	physical measures ftf iw
KI802	physical measures consent form
KI854	blood pressure complete
KI859	bloodpressure 1 systolic
KI860	bloodpressure 1 diastolic
KI861	bloodpressure 1 pulse
KI864	bloodpressure 2 systolic
KI865	bloodpressure 2 diastolic
KI866	bloodpressure 2 pulse
KI869	bloodpressure 3 systolic
KI870	bloodpressure 3 diastolic
KI871	bloodpressure 3 pulse
KI872	bloodpressure arm
KI873	bloodpressure compliance
KI874	bloodpressure position
KI875	bloodpressure smoke etc

### Wave 9:

LA028	r in nursing home
LI800	physical measures ftf iw
LI802	physical measures consent form
LI854	blood pressure complete
LI859	bloodpressure 1 systolic
LI860	bloodpressure 1 diastolic
LI861	bloodpressure 1 pulse
LI864	bloodpressure 2 systolic
LI865	bloodpressure 2 diastolic
LI866	bloodpressure 2 pulse

LI869 bloodpressure 3 systolic  
LI870 bloodpressure 3 diastolic  
LI871 bloodpressure 3 pulse  
LI872 bloodpressure arm  
LI873 bloodpressure compliance  
LI874 bloodpressure position  
LI875 bloodpressure smoke etc

Wave 10:

MA028 r in nursing home  
MI800 physical measures ftf iw  
MI802 physical measures consent  
MI854 blood pressure complete  
MI859 bloodpressure 1 systolic  
MI860 bloodpressure 1 diastolic  
MI861 bloodpressure 1 pulse  
MI864 bloodpressure 2 systolic  
MI865 bloodpressure 2 diastolic  
MI866 bloodpressure 2 pulse  
MI869 bloodpressure 3 systolic  
MI870 bloodpressure 3 diastolic  
MI871 bloodpressure 3 pulse  
MI872 bloodpressure arm  
MI873 bloodpressure compliance  
MI874 bloodpressure position  
MI875 bloodpressure smoke etc

Wave 11:

NA028 r in nursing home  
NI800 physical measures ftf iw  
NI802 physical measures consent  
NI854 blood pressure complete  
NI859 bloodpressure 1 systolic  
NI860 bloodpressure 1 diastolic  
NI861 bloodpressure 1 pulse  
NI864 bloodpressure 2 systolic  
NI865 bloodpressure 2 diastolic  
NI866 bloodpressure 2 pulse

### How Constructed:

RwBPSFT, RwBPREF, RwbPTRYU, RwbPEQUP, and RwbPOTHR indicate the reasons for the respondent not taking part in the blood pressure test as reported by the interviewer. The interviewer is asked to report all of the reasons the respondent did not complete the blood pressure test. RwBPSFT indicates whether the respondent did not participate in the blood pressure test because they felt it would not be safe, the interviewer felt it would be unsafe, because the respondent had a rash, cast, edema, open sores or wounds, or a significant bruise where the blood pressure cuff would contact the respondent's arm, or for another health reason. RwBPREF indicates whether the respondent did not participate in the blood pressure test because they refused, with no reason given. RwbPTRYU indicates whether the respondent did not participate in the blood pressure test because they tried but were unable to complete the test. RwbPEQUP indicates whether the respondent did not participate in the blood pressure test because of either problems with equipment/supplies or not having a suitable space to perform the test. RwbPOTHR indicates whether the respondent did not participate in the blood pressure test because either they did not understand the instructions or because of another reason. RwBPSFT, RwBPREF, RwbPTRYU, RwbPEQUP, and RwbPOTHR are coded as 0 if the specific reason was not given for the respondent not completing the blood pressure test, and are coded as 1 if the specific reason was given. Don't know, refuse, and other missing responses to RwBPSFT, RwBPREF, RwbPTRYU, RwbPEQUP, and RwbPOTHR are set to special missing .d, .r, and .m, respectively. Special missing .c is assigned if the respondent completed at least one of the blood pressure tests. Special missing .s is assigned if the physical measure questions were skipped because the respondent was not selected for a face-to-face interview, was not selected for an enhanced face-to-face interview, or was living in the nursing home. Responses are set to blank missing (.) when the respondent does not participate in the current wave.

SwBPSFT, SwBPREF, SwBPTRYU, SwBPEQUP, and SwBPOTHR indicate the reasons for the respondent's current wave's spouse not taking part in the blood pressure test, and their values are taken from the spouse's values to RwBPSFT, RwBPREF, RwbPTRYU, RwbPEQUP, and RwbPOTHR. In addition to the special missing codes employed by RwBPSFT, RwBPREF, RwbPTRYU, RwbPEQUP, and RwbPOTHR, SwBPSFT, SwBPREF, SwBPTRYU, SwBPEQUP, and SwBPOTHR employ two additional special missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

### Cross Wave Differences in HRS

Blood pressure measurements are performed starting in Wave 8.

The wording of one of the options used to create RwBPSFT changes slightly over the waves. In Wave 8, the wording is "R had a rash, a cast, edema, open sores or wounds, or significant bruise where the blood cuff would contact R's arm; other health reason". In Waves 9 through 11, the wording is "R had a rash, cast, edema, etc. on arm; other health reason". Starting in Wave 12, the wording is "R had a rash, a cast, edema, open sores or wounds, or significant bruise where the blood cuff would contact R's arm".

The wording of one of the options used to create RwbPEQUP is different in Wave 8. In Wave 8, the wording is "unsuitable location", whereas starting in Wave 9, the wording is "no suitable space".

Starting in Wave 12, there are additional screening questions asking about the condition of the respondent's arms and their understanding of the directions and feelings of safety in completing the tests which determine whether the respondent participates in the blood pressure tests.

No physical measures were collected in Wave 15 as a result of the COVID-19 pandemic.

### HRS Variables Used:

Wave 8:

KI854	blood pressure complete
KI855M1	blood pressure not complete-1
KI855M2	blood pressure not complete-2
KI855M3	blood pressure not complete-3
KI855M4	blood pressure not complete-4
Wave 9:	
LI854	blood pressure complete
LI855M1	blood pressure not complete-1
LI855M2	blood pressure not complete-2
LI855M3	blood pressure not complete-3
LI855M4	blood pressure not complete-4
Wave 10:	
MI854	blood pressure complete
MI855M1	blood pressure not complete-1
MI855M2	blood pressure not complete-2
MI855M3	blood pressure not complete-3
MI855M4	blood pressure not complete-4
Wave 11:	
NI854	blood pressure complete
NI855M1	blood pressure not complete-1
NI855M2	blood pressure not complete-2
NI855M3	blood pressure not complete-3
NI855M4	blood pressure not complete-4
Wave 12:	
OI854	blood pressure complete
OI855M1	blood pressure not complete-1
OI855M2	blood pressure not complete-2
OI855M3	blood pressure not complete-3
OI855M4	blood pressure not complete-4
Wave 13:	
PI854	blood pressure complete
PI855M1	blood pressure not complete-1
PI855M2	blood pressure not complete-2
PI855M3	blood pressure not complete-3
PI855M4	blood pressure not complete-4
Wave 14:	
QI854	blood pressure complete
QI855M1	blood pressure not complete-1
QI855M2	blood pressure not complete-2
QI855M3	blood pressure not complete-3
QI855M4	blood pressure not complete-4

## How Constructed:

RwPUFF1, RwPUFF2, and RwPUFF3 indicate the respondents first, second, and third breathing test results. RwPUFF indicates the maximum measurement taken for the breathing test. Starting in Wave 12, readings that went past the last tick mark are assigned a value of 890. Don't know, refused, or other missing responses for the breathing tests are assigned special missing codes .d, .r, .m, respectively. Special missing .x is assigned if the respondent tried to do the test but was unable to do it or received an error message. Special missing .n is assigned if the respondent did not complete the measurement due to a variety of reasons, including safety concerns or the respondent did not understand the instructions. Special missing .s is assigned if the questions were skipped because the respondent was not selected for a face-to-face interview, was not selected for an enhanced face-to-face interview, or was living in the nursing home. Plain missing (.) is assigned for respondents who did not respond to the current wave.

SwPUFF1, SwPUFF2, SwPUFF3, and SwPUFF indicate the respective results for the current wave's spouse, and their values are taken from RwPUFF1, RwPUFF2, RwPUFF3, and RwPUFF. In addition to the special missing codes used for RwPUFF1, RwPUFF2, RwPUFF3, and RwPUFF, SwPUFF1, SwPUFF2, SwPUFF3, and SwPUFF employ two additional missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Please note that some extreme values may remain in RwPUFF1, RwPUFF2, RwPUFF3, and RwPUFF and have been left to the discretion of the user. It may be useful to reference the following document for further consideration: [Physical Measures And Biomarkers](#).

RwPUFFCOMP indicates whether the respondent is willing and able to complete the breathing test. RwPUFFCOMP is coded as 1 if the respondent understood the directions for the test, the respondent felt it would be safe to complete the test, and the respondent completed at least one trial of the breathing test. RwPUFFCOMP is coded as 0 if the respondent did not understand the instructions, expressed safety concerns, or did not complete any trials of the breathing test. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, .m, respectively. Special missing .s is assigned if the physical measure questions were skipped because the respondent was not selected for a face-to-face interview, was not selected for an enhanced face-to-face interview, or was living in the nursing home. This measure is set to plain missing (.) for respondents who did not respond to the current wave.

SwPUFFCOMP indicates whether the current wave's spouse was willing and able to complete the breathing test, and its values are taken from RwPUFFCOMP. In addition to the special missing codes used in RwPUFFCOMP, SwPUFFCOMP employs two additional missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwPUFFPOS indicates the position the respondent was in during the test. RwPUFFPOS is coded as follows: 1.standing, 2.sitting, and 3.lying down. Don't know, refused, or other missing responses for the breathing test position are assigned special missing codes .d, .r, .m, respectively. Special missing .n is assigned if the respondent did not complete the measurement due to a variety of reasons, including safety concerns, or the respondent did not understand the instructions. Special missing .s is assigned if the questions were skipped because the respondent was not selected for a face-to-face interview, was not selected for an enhanced face-to-face interview, or was living in the nursing home. Plain missing (.) is assigned for respondents who did not respond to the current wave.

SwPUFFPOS indicates the position for the current wave's spouse during the puff test, and its values are taken from RwPUFFPOS. In addition to the special missing codes used for RwPUFFPOS, SwPUFFPOS employs two additional missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwPUFFEFF indicates how much effort the interviewer reports the respondent using during the breathing tests. RwPUFFEFF is coded as follows: 1.respondent gave full effort, 2.respondent was prevented from giving full effort by illness, pain, or other symptoms or discomforts, 3.respondent did not appear to give full effort, but no obvious reason for this. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, .m, respectively. Special missing .n is assigned if the respondent did not complete the measurement due to a variety of reasons, including safety concerns or the respondent did not understand the instructions. Special missing .s is assigned if the physical measure questions were skipped because the respondent was not selected for a face-to-face interview, was not selected for an enhanced face-to-face interview, or was living in the nursing home. This measure is set to plain missing (.) for respondents who did not respond to the current wave.

SwPUFFEFF indicates how much effort the interviewer reports the respondent's current wave's spouse using during the breathing test and its values are taken from the spouse's vales to RwPUFFEFF. In addition to the special missing codes used in RwPUFFEFF, SwPUFFEFF employs two additional missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Lung function tests began in Wave 7, but they were only given to a random subsample of approximately 3300 respondents. Lung function tests were given to a larger sample of respondents starting in Wave 8.

Starting in Wave 12, there is an additional screening question asking about the respondent's understanding of the directions and feelings of safety in completing these tests which determines whether the respondent participates in the lung function tests. Also starting in this wave, a value of 890 is assigned if the reading on the instrument was past the last tick mark.

No physical measures were collected in Wave 15 as a result of the COVID-19 pandemic.

**HRS Variables Used:**

Wave 7:

JA009	proxy/self interview
JA028	r in nursing home
JI800	physical measures ftf iw
JI801	certified physical measures
JI802	physical measures consent form
JI804	breathing test at least one trial
JI807	physical measures puff test reading- 1
JI808	physical measures puff test reading- 2
JI809	physical measures puff test reading- 3
JI810	breathing test effort
JI811	r position for breathing test
JZ227	selected phy measures module

Wave 8:

KA028	r in nursing home
KI800	physical measures ftf iw
KI802	physical measures consent form
KI804	breath complete at least one trial
KI807	puff test 1
KI808	puff test 2
KI809	puff test 3
KI810	r breathing test effort
KI811	breathing test r position

Wave 9:

LA028	r in nursing home
LI800	physical measures ftf iw
LI802	physical measures consent form
LI804	breath complete at least one trial
LI807	puff test 1
LI808	puff test 2
LI809	puff test 3
LI810	r breathing test effort
LI811	breathing test r position

Wave 10:

MA028	r in nursing home
MI800	physical measures ftf iw
MI802	physical measures consent
MI804	breath complete at least one trial
MI807	puff test 1
MI808	puff test 2
MI809	puff test 3
MI810	r breathing test effort
MI811	breathing test r position

Wave 11:

NA028	r in nursing home
NI800	physical measures ftf iw
NI802	physical measures consent
NI804	breath complete at least one trial
NI807	puff test 1
NI808	puff test 2
NI809	puff test 3
NI810	r breathing test effort
NI811	breathing test r position

Wave 12:

OA028	r in nursing home
OI800	physical measures ftf iw
OI802	physical measures consent
OI804	breath complete at least one trial
OI807	puff test 1
OI808	puff test 2
OI809	puff test 3

OI810 r breathing test effort  
OI811 breathing test r position  
OI964 breathing test safety question

## Wave 13:

PA028 r in nursing home  
PI800 physical measures ftf iw  
PI802 physical measures consent  
PI804 breath complete at least one trial  
PI807 puff test 1  
PI808 puff test 2  
PI809 puff test 3  
PI810 r breathing test effort  
PI811 breathing test r position  
PI964 breathing test safety question

## Wave 14:

QA028 r in nursing home  
QI800 physical measures ftf iw  
QI802 physical measures consent  
QI804 breath complete at least one trial  
QI807 puff test 1  
QI808 puff test 2  
QI809 puff test 3  
QI810 r breathing test effort  
QI811 breathing test r position  
QI964 breathing test safety question

<b>Lung Function Measurements (Peak Flow): Reasons Didn't Complete</b>

### How Constructed:

RwPUFFSFT, RwPUFFREF, RwPUFFTRYU, RwPUFFEQUP, and RwPUFFOTHR indicate the reasons for the respondent not taking part in the breathing test as reported by the interviewer. The interviewer is asked to report all of the reasons the respondent did not complete the breathing test. RwPUFFSFT indicates whether the respondent did not participate in the breathing test because they felt it would not be safe, the interviewer felt it would be unsafe, or due to health reasons. RwPUFFREF indicates whether the respondent did not participate in the breathing test because they refused, with no reason given. RwPUFFTRYU indicates whether the respondent did not participate in the breathing test because they tried but were unable to complete the test. RwPUFFEQUP indicates whether the respondent did not participate in the breathing test because of either problems with equipment/supplies or not having a suitable space to perform the test. RwPUFFOTHR indicates whether the respondent did not participate in the breathing test because either they did not understand the instructions or because of another reason. RwPUFFSFT, RwPUFFREF, RwPUFFTRYU, RwPUFFEQUP, and RwPUFFOTHR are coded as 0 if the specific reason was not given for the respondent not completing the breathing test, and are coded as 1 if the specific reason was given. Don't know, refuse, and other missing responses to RwPUFFSFT, RwPUFFREF, RwPUFFTRYU, RwPUFFEQUP, and RwPUFFOTHR are set to special missing .d, .r, and .m, respectively. Special missing .c is assigned if the respondent completed at least one of the breathing tests. Special missing .s is assigned if the physical measure questions were skipped because the respondent was not selected for a face-to-face interview, was not selected for an enhanced face-to-face interview, or was living in the nursing home. Responses are set to blank missing (.) when the respondent does not participate in the current wave.

SwPUFFSFT, SwPUFFREF, SwPUFFTRYU, SwPUFFEQUP, and SwPUFFOTHR indicate the reasons for the respondent's current wave's spouse not taking part in the breathing test, and their values are taken from the spouse's values to RwPUFFSFT, RwPUFFREF, RwPUFFTRYU, RwPUFFEQUP, and RwPUFFOTHR. In addition to the special missing codes employed by RwPUFFSFT, RwPUFFREF, RwPUFFTRYU, RwPUFFEQUP, and RwPUFFOTHR, SwPUFFSFT, SwPUFFREF, SwPUFFTRYU, SwPUFFEQUP, and SwPUFFOTHR employ two additional special missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

### Cross Wave Differences in HRS

Lung function tests began in Wave 7, but they were only given to a random subsample of approximately 3300 respondents. Lung function tests were given to a larger sample of respondents starting in Wave 8.

The wording of one of the options used to create RwpUFFSFT changes slightly over the waves. In Wave 7, the wording is "R had surgery, injury or other health condition that prevented R from taking the test". In Wave 8, the wording is "R had surgery, injury or other health condition that prevented R from completing the measurement". Starting in Wave 9, the wording is "R could not participate due to health reasons".

The wording of and the options used to create RwpUFFEQUP changes slightly over the waves. In Wave 7, one option is worded as "problem with equipment and/or consent form", while starting in Wave 8, this option is worded as "problem with equipment or supplies". Starting in Wave 8, there is an option for an "unsuitable location" or "no suitable space", while a comparable option is not present in Wave 7.

Starting in Wave 12, there is an additional screening question asking about the respondent's understanding of the directions and feelings of safety in completing these tests which determines whether the respondent participates in the lung function tests.

No physical measures were collected in Wave 15 as a result of the COVID-19 pandemic.

### HRS Variables Used:

#### Wave 7:

JI804	breathing test at least one trial
JI805M1	reason not complete breathing test-1
JI805M2	reason not complete breathing test-2
JI805M3	reason not complete breathing test-3
JI805M4	reason not complete breathing test-4

#### Wave 8:

KI804	breath complete at least one trial
KI805M1	breath test reason not complete-1
KI805M2	breath test reason not complete-2
KI805M3	breath test reason not complete-3
KI805M4	breath test reason not complete-4

#### Wave 9:

LI804	breath complete at least one trial
LI805M1	breath test reason not complete -1
LI805M2	breath test reason not complete -2
LI805M3	breath test reason not complete -3
LI805M4	breath test reason not complete -4

#### Wave 10:

MI804	breath complete at least one trial
MI805M1	breath test reason not complete -1
MI805M2	breath test reason not complete -2
MI805M3	breath test reason not complete -3
MI805M4	breath test reason not complete -4

#### Wave 11:

NI804	breath complete at least one trial
NI805M1	breath test reason not complete -1
NI805M2	breath test reason not complete -2
NI805M3	breath test reason not complete -3
NI805M4	breath test reason not complete -4

#### Wave 12:

OI804	breath complete at least one trial
OI805M1	breath test reason not complete -1
OI805M2	breath test reason not complete -2
OI805M3	breath test reason not complete -3
OI805M4	breath test reason not complete -4

#### Wave 13:

PI804	breath complete at least one trial
PI805M1	breath test reason not complete -1
PI805M2	breath test reason not complete -2
PI805M3	breath test reason not complete -3
PI805M4	breath test reason not complete -4

#### Wave 14:

QI804	breath complete at least one trial
QI805M1	breath test reason not complete -1
QI805M2	breath test reason not complete -2
QI805M3	breath test reason not complete -3
QI805M4	breath test reason not complete -4

## How Constructed:

RwDOMHAND indicates the respondent's dominant hand. RwDOMHAND is coded as follows: 1.right hand, 2.left hand, and 3.both hands are equally dominant. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, .m. Special missing .n is assigned if the respondent did not complete the hand strength measurement due to a variety of reasons, including safety concerns or the respondent did not understand the instructions. Special missing .s is assigned if the questions were skipped because the respondent was not selected for a face-to-face interview, was not selected for an enhanced face-to-face interview, or was living in the nursing home. Plain missing (.) is assigned for respondents who did not respond to the current wave.

SwDOMHAND indicates the current wave's spouse's dominant hand, and is taken from RwDOMHAND. In addition to the special missing codes used for RwDOMHAND, SwDOMHAND employs two additional missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwLGRIP1, RwLGRIP2, RwRGRIP1, and RwRGRIP2 indicate the respondent's first and second hand strength measurements for the left and right hand, respectively. RwLGRIP and RwRGRIP indicate the respondent's maximum hand strength measurement for the left and right hand, respectively. RwGRIPSUM indicates the maximum measurement of the dominant hand, as such, RwLGRIP is used for respondents with a dominant left hand, and RwRGRIP is used for respondents with a dominant right hand. For respondents with equally dominant hands, the greater value between RwLGRIP and RwRGRIP is used. Don't know, refused, or other missing responses of all hand strength measurements are assigned special missing codes .d, .r, .m. Special missing .l is assigned to RwLGRIP1, RwLGRIP2, RwLGRIP3, RwLGRIP, and RwGRIPSUM for respondents who were unable to perform the grip strength test using their left hand, starting in Wave 12. Special missing .t is assigned to RwRGRIP1, RwRGRIP2, RwRGRIP3, RwRGRIP, and RwGRIPSUM for respondents who were unable to perform the grip strength test using their right hand, starting in Wave 12. Special missing .i is assigned to grip strength readings with values of more than 100. Special missing .i is also assigned if the value of the hand strength measurements was invalid in wave 7. Special missing .x is assigned if the respondent tried to do the test but was unable to do it. Special missing .n is assigned if the respondent did not complete the hand strength measurement due to a variety of reasons, including safety concerns or the respondent did not understand the instructions. The special missing .s is assigned if the questions were skipped because the respondent was not selected for a face-to-face interview, was not

selected for an enhanced face-to-face interview, or was living in the nursing home. Plain missing (.) is assigned for respondents who did not respond to the current wave.

SwLGRIPI1, SwLGRIPI2, SwRGRIP1, and SwRGRIP2 indicate the current wave's spouse's first and second, left and right hand strength measurements, and is taken from the corresponding respondent variables. SwLGRIPI and SwRGRIP indicate the current wave's spouse's maximum hand strength measurement for the left and right hand, respectively. SwGRIPSUM indicates the current wave's spouse's dominant hand measurement, and is taken from the spouse's values to RwGRIPSUM. In addition to the special missing codes used by SwLGRIPI1, SwLGRIPI2, SwRGRIP1, SwRGRIP2, SwLGRIPI, SwRGRIP, and SwGRIPSUM, SwLGRIPI1, SwLGRIPI2, SwRGRIP1, SwRGRIP2, SwLGRIPI, SwRGRIP, and SwGRIPSUM employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Please note that some extreme values may remain in these variables and have been left to the discretion of the user. It may be useful to reference the following document for further consideration: [Physical Measures And Biomarkers](#).

RwGRIPCOMP indicates whether the respondent is willing and able to complete the grip strength tests. RwGRIPCOMP is coded as 1 if the respondent did not signal having had surgery or experiencing swelling, inflammation, severe pain, or injury in one or both hands within the last 6 months, the respondent understood the directions for the test, the respondent felt it would be safe to complete the test, and the respondent completed at least one trial of the hand strength test. RwGRIPCOMP is coded as 0 if the respondent did have surgery or experience swelling, inflammation, severe pain, or injury in one or both hands within the last 6 months, the respondent did not understand the instructions, the respondent expressed safety concerns, or the respondent did not complete any trials of the hand strength test. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, .m, respectively. Special missing .s is assigned if the physical measure questions were skipped because the respondent was not selected for a face-to-face interview, was not selected for an enhanced face-to-face interview, or was living in the nursing home. This measure is set to plain missing (.) for respondents who did not respond to the current wave.

SwGRIPCOMP indicates whether the respondent's current wave's spouse is willing and able to complete the grip strength test, and its values are taken from RwGRIPCOMP. In addition to the special missing codes employed by RwGRIPCOMP, SwGRIPCOMP employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwGRIPPEFF indicates how much effort the interviewer reports the respondent using during the grip strength tests. RwGRIPPEFF is coded as follows: 1.respondent gave full effort, 2.respondent was prevented from giving full effort by illness, pain or other symptoms or discomforts, 3.respondent did not appear to give full effort, but no obvious reason for this. RwGRIPPOS indicates the respondent's position during the grip strength tests. RwGRIPPOS is coded as follows: 1.standing, 2.sitting, 3.lying down. RwGRIPRSTA indicates whether the respondent rested their arms on a support during the grip strength tests. RwGRIPRSTA is coded as 0.no if they did not rest either of their arms on a support, and 1.yes if they rested at least one arm on a support. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, .m, respectively. Special missing .n is assigned if the respondent did not complete the hand strength measurement due to a variety of reasons, including safety concerns or the respondent did not understand the instructions. Special missing .s is assigned if the physical measure questions were skipped because the respondent was not selected for a face-to-face interview, was not selected for an enhanced face-to-face interview, or was living in the nursing home. This measure is set to plain missing (.) for respondents who did not respond to the current wave.

SwGRIPPEFF, SwGRIPPOS, and SwGRIPRSTA indicate the respondent's current wave's spouse's effort reported by the interviewer during the grip strength test, position during the grip strength test, and whether they rested their arms on a support, and their values are taken from RwGRIPPEFF, RwGRIPPOS, and RwGRIPRSTA. In addition to the special missing codes employed by RwGRIPPEFF, RwGRIPPOS, and RwGRIPRSTA, SwGRIPPEFF, SwGRIPPOS, and SwGRIPRSTA employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Hand strength tests began in Wave 7, but they were only given to a random subsample of approximately 3300 respondents. Hand strength tests were given to a larger sample of respondents starting in Wave 8.

Special missing .i for HRS-reported "invalid" values in RwLGRIP1, RwLGRIP2, RwrGRIP1, RwrGRIP2, and RwrGRIPSUM is only used in Wave 7.

Starting in Wave 12, there are additional screening questions asking about any injury to the respondent's hands, and if so which hand, and their understanding of the directions and feelings of safety in completing the tests which determine whether the respondent participates in the hand strength tests. As a result of these questions, special missing .l and special missing .t values are used to indicate whether the respondent was unable to complete the test using their left or right hand, respectively.

Also starting in Wave 12, the interviewer is asked to report whether the respondent rested no hands, both hands, their left hand only, or their right hand only on a support during the grip strength tests. In previous waves, the interviewer is asked whether the respondent rested their arm on a support while performing the test with only yes and no as allowable responses.

No physical measures were collected in Wave 15 as a result of the COVID-19 pandemic.

### HRS Variables Used:

#### Wave 7:

JA009	proxy/self interview
JA028	r in nursing home
JI800	physical measures ftf iw
JI801	certified physical measures
JI802	physical measures consent form
JI812	hand strength at least one trial
JI815	hand strength dominant hand
JI816	first left hand measurement
JI817	r effort hand strength test
JI818	r position hand strength test
JI819	rest arm during hand strength test
JI851	right hand first measurement
JI852	left hand second measurement
JI853	right hand second measurement
JZ227	selected phy measures module

#### Wave 8:

KA028	r in nursing home
KI800	physical measures ftf iw
KI802	physical measures consent form
KI812	hand strength complete one trial
KI815	grip dominant hand
KI816	left hand first
KI817	grip r effort
KI818	hand strength test r position
KI819	hand strength rest arm
KI851	right hand first
KI852	left hand second
KI853	right hand second

#### Wave 9:

LA028	r in nursing home
LI800	physical measures ftf iw
LI802	physical measures consent form
LI812	hand strength complete at least one trial
LI815	grip dominant hand
LI816	left hand first
LI817	grip r effort
LI818	hand strength test r position
LI819	hand strength rest arm
LI851	right hand first
LI852	left hand second
LI853	right hand second

## Wave 10:

MA028 r in nursing home  
MI800 physical measures ftf iw  
MI802 physical measures consent  
MI812 hand strength complete at least one trial  
MI815 grip dominant hand  
MI816 left hand first  
MI817 grip r effort  
MI818 hand strength test r position  
MI819 hand strength rest arm  
MI851 right hand first  
MI852 left hand second  
MI853 right hand second

## Wave 11:

NA028 r in nursing home  
NI800 physical measures ftf iw  
NI802 physical measures consent  
NI812 hand strength complete at least one trial  
NI815 grip dominant hand  
NI816 left hand first  
NI817 grip r effort  
NI818 hand strength test r position  
NI819 hand strength rest arm  
NI851 right hand first  
NI852 left hand second  
NI853 right hand second

## Wave 12:

OA028 r in nursing home  
OI800 physical measures ftf iw  
OI802 physical measures consent  
OI812 hand strength complete at least one trial  
OI815 grip dominant hand  
OI816 left hand first  
OI817 grip r effort  
OI818 hand strength test r position  
OI819 hand strength rest arm  
OI851 right hand first  
OI852 left hand second  
OI853 right hand second  
OI966 injury, pain or surgery on hand(s)  
OI967 affected hand(s)  
OI968 hand-strength safety question

## Wave 13:

PA028 r in nursing home  
PI800 physical measures ftf iw  
PI802 physical measures consent  
PI812 hand strength complete at least one trial  
PI815 grip dominant hand  
PI816 left hand first  
PI817 grip r effort  
PI818 hand strength test r position  
PI819 hand strength rest arm  
PI851 right hand first  
PI852 left hand second  
PI853 right hand second  
PI966 injury, pain or surgery on hand(s)  
PI967 affected hand(s)  
PI968 hand-strength safety question

## Wave 14:

QA028 r in nursing home  
QI800 physical measures ftf iw  
QI802 physical measures consent  
QI812 hand strength complete at least one trial

QI815	grip dominant hand
QI816	left hand first
QI817	grip r effort
QI818	hand strength test r position
QI819	hand strength rest arm
QI851	right hand first
QI852	left hand second
QI853	right hand second
QI966	injury, pain or surgery on hand(s)
QI967	affected hand(s)
QI968	hand-strength safety question

### How Constructed:

RwGRIPSFT, RwGRIPREF, RwGRIPTRYU, RwGRIPOTHR, and RwGRIPOTHR indicate the reasons for the respondent not taking part in the grip strength test as reported by the interviewer. The interviewer is asked to report all of the reasons the respondent did not complete the grip strength test. RwGRIPSFT indicates whether the respondent did not participate in the grip strength test because they felt it would not be safe, the interviewer felt it would not be safe, or due to surgery, injury or swelling in both hands or another health condition. RwGRIPREF indicates whether the respondent did not participate in the grip strength test because they refused, with no reason given. RwGRIPTRYU indicates whether the respondent did not participate in the grip strength test because they tried but were unable to complete the test. RwGRIPOTHR indicates whether the respondent did not participate in the grip strength test because of either problems with equipment/supplies or not having a suitable space to perform the test. RwGRIPOTHR indicates whether the respondent did not participate in the grip strength test because they did not understand the instructions or because of another reason. RwGRIPSFT, RwGRIPREF, RwGRIPTRYU, RwGRIPOTHR, and RwGRIPOTHR are coded as 0 if the specific reason was not given for the respondent not completing the grip strength test, and are coded as 1 if the specific reason was given. Don't know, refuse, and other missing responses to RwGRIPSFT, RwGRIPREF, RwGRIPTRYU, RwGRIPOTHR, and RwGRIPOTHR are set to special missing .d, .r, and .m, respectively. Special missing .c is assigned if the respondent completed at least one of the grip strength tests. Special missing .s is assigned if the physical measure questions were skipped because the respondent was not selected for a face-to-face interview, was not selected for an enhanced face-to-face interview, or was living in the nursing home. Responses are set to blank missing (.) when the respondent does not participate in the current wave.

SwGRIPSFT, SwGRIPREF, SwGRIPTRYU, SwGRIPOTHR, and SwGRIPOTHR indicate the reasons for the respondent's current wave's spouse not taking part in the grip strength test, and their values are taken from the spouse's values to RwGRIPSFT, RwGRIPREF, RwGRIPTRYU, RwGRIPOTHR, and RwGRIPOTHR. In addition to the special missing codes employed by RwGRIPSFT, RwGRIPREF, RwGRIPTRYU, RwGRIPOTHR, and SwGRIPOTHR,

SwGRIPSFT, SwGRIPREF, SwGRIPTRYU, SwGRIPEQUP, and SwGRIPOTHR employ two additional special missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

### Cross Wave Differences in HRS

Hand strength tests began in Wave 7, but they were only given to a random subsample of approximately 3300 respondents. Hand strength tests were given to a larger sample of respondents starting in Wave 8.

The wording for one of the options used to create RwGRIPSFT changes slightly across waves. In Wave 7, the wording is "R had surgery, injury, swelling, etc. on both hands in past 6 months". In Wave 8, the wording is "R had surgery, injury, swelling, etc. on both hands in past 6 months; other health reason". In Waves 9 through 11, the wording is "R could not participate due to surgery, swelling, etc; other health reason". Starting in Wave 12, the wording is "R had surgery, injury, swelling, etc. on both hands".

The wording of and options used to create RwGRIPEQUP change across waves. In Wave 7, the only option applicable to this variable is "problem with equipment and/or consent form". In Wave 8, the wording for this option is changed to "problem with equipment or supplies". Wave 8 also adds the option of "unsuitable location", which is changed to "no suitable space" in Waves 9 through 11 and Wave 14. Waves 12 and 13 have no option for the suitability of the location.

Starting in Wave 12, there are additional screening questions asking about any injury to the respondent's hands, and if so which hand, and their understanding of the directions and feelings of safety in completing the tests which determine whether the respondent participates in the hand strength tests.

No physical measures were collected in Wave 15 as a result of the COVID-19 pandemic.

### HRS Variables Used:

#### Wave 7:

JI812	hand strength at least one trial
JI813M1	reason hand strength test not complete-1
JI813M2	reason hand strength test not complete-2
JI813M3	reason hand strength test not complete-3
JI813M4	reason hand strength test not complete-4

#### Wave 8:

KI812	hand strength complete one trial
KI813M1	hand strength test reason not complete-1
KI813M2	hand strength test reason not complete-2
KI813M3	hand strength test reason not complete-3
KI813M4	hand strength test reason not complete-4

#### Wave 9:

LI812	hand strength complete at least one trial
LI813M1	hand strength test reason not complete -1
LI813M2	hand strength test reason not complete -2
LI813M3	hand strength test reason not complete -3
LI813M4	hand strength test reason not complete -4

#### Wave 10:

MI812	hand strength complete at least one trial
MI813M1	hand strength test reason not complete -1
MI813M2	hand strength test reason not complete -2
MI813M3	hand strength test reason not complete -3
MI813M4	hand strength test reason not complete -4

#### Wave 11:

NI812	hand strength complete at least one trial
NI813M1	hand strength test reason not complete -1
NI813M2	hand strength test reason not complete -2
NI813M3	hand strength test reason not complete -3
NI813M4	hand strength test reason not complete -4

#### Wave 12:

OI812	hand strength complete at least one trial
-------	---

OI813M1	hand strength test reason not complete	-1
OI813M2	hand strength test reason not complete	-2
OI813M3	hand strength test reason not complete	-3
OI813M4	hand strength test reason not complete	-4

## Wave 13:

PI812	hand strength complete at least one trial	
PI813M1	hand strength test reason not complete	-1
PI813M2	hand strength test reason not complete	-2
PI813M3	hand strength test reason not complete	-3
PI813M4	hand strength test reason not complete	-4

## Wave 14:

QI812	hand strength complete at least one trial	
QI813M1	hand strength test reason not complete	-1
QI813M2	hand strength test reason not complete	-2
QI813M3	hand strength test reason not complete	-3
QI813M4	hand strength test reason not complete	-4

## How Constructed:

RwSEMITAN indicates the amount of time the respondent held the semi-tandem standing test in seconds to two decimal places. The maximum value is 10 seconds. The respondent is instructed to stand with the side of the heel of one foot touching the big toe of the other foot for 10 seconds, if they are able. The respondent is allowed to put either foot in front and may use their arms, bend their knees or use their body to maintain balance. Don't know, refused, or other missing responses for the balance tests are assigned special missing codes .d, .r, .m, respectively. Special missing .x is assigned if the respondent tried to do the test but was unable to do it or received an error message. Special missing .n is assigned if the respondent did not complete the standing tests due to various reasons, including not understanding the instructions and safety concerns. Special missing .s is assigned if the questions were skipped because the respondent was not selected for a face-to-face interview, was not selected for an enhanced face-to-face interview, or was living in the nursing home. Plain missing (.) is assigned for respondents who did not respond to the current wave.

SwSEMITAN indicates the length of time the respondent's current wave's spouse held the semi-tandem standing test, and its values are taken from RwSEMITAN. In addition to the special missing codes employed by RwSEMITAN, SwSEMITAN employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwSEMIDONE indicates whether the respondent maintained balance for the full 10 seconds during the semi-tandem standing test. RwSEMIDONE is coded as 1 if the respondent maintained balance for 10 seconds, while a 0 indicates that the respondent's time fell below 10 seconds. Don't know, refused, or other missing responses for the balance tests are assigned special missing codes .d, .r, .m, respectively. Special missing .x is assigned if the respondent tried to do the test but was unable to do it or received an error message. Special missing .n is assigned if the respondent did not complete the standing tests due to various reasons, including not understanding the instructions, or safety concerns. Special missing .s is assigned if the questions were skipped because the respondent was not selected for a face-to-face interview, was not selected for an enhanced face-to-face interview, or was living in the nursing home. Plain missing (.) is assigned for respondents who did not respond to the current wave.

SwSEMIDONE indicates whether the respondent's current wave's spouse maintained balance for the entire semi-tandem standing test, and its values are taken from RwSEMIDONE. In addition to the special missing codes employed by RwSEMIDONE, SwSEMIDONE employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwSEMICOMP indicates whether the respondent was willing and able to complete the semi-tandem standing test. RwSEMICOMP is coded as 1 if the respondent did not report having any problems with recent surgeries, injuries or other health conditions that may prevent the respondent from standing up from a chair and balancing and further stated they can complete the semi-tandem test, the respondent understood the instructions for the test, the respondent felt it was safe for them to complete the test, and the respondent at least attempted the test. RwSEMICOMP is coded as 0 if the respondent did not want to complete the test because of physical health issues, the respondent did not understand the instructions, the respondent simply did not feel safe to complete the test, or the respondent did not attempt the test. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, .m, respectively. Special missing .s is assigned if the questions were skipped because the respondent was not selected for a face-to-face interview, was not selected for an enhanced face-to-face interview, or was living in the nursing home. Plain missing (.) is assigned for respondents who did not respond to the current wave.

SwSEMICOMP indicates whether the respondent's current wave's spouse was willing and able to complete the semi-tandem standing test, and its values are taken from RwSEMICOMP. In addition to the special missing codes employed by RwSEMICOMP, SwSEMICOMP employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwFULLTAN indicates the amount of time the respondent held the full-tandem test in seconds to two decimal places. The maximum value is 30 and 60 seconds, depending on age. Respondents 70 and older were only expected to hold full-tandem for 30 seconds, but their full time was recorded if past 30 seconds, while those under age 70 were expected to hold 60 seconds, if able. The respondent was instructed to stand with the heel of one foot in front of the other, touching the toes of the front foot for 30 seconds or 60 seconds, depending on age. The respondent was allowed to use their arms, bend their knees, or move their body to maintain balance. Only respondents who maintained the semi-tandem position for the full 10 seconds performed the full-tandem test. Special missing .t is assigned if the respondent was not asked to complete this test because they were unable to complete the semi-tandem standing test. Don't know, refused, or other missing responses for the balance tests are assigned special missing codes .d, .r, .m, respectively. Special missing .x is assigned if the respondent tried to do the test but was unable to do it or received an error message. Special missing .n is assigned if the respondent did not complete the standing tests due to various reasons, including not understanding the instructions, or safety concerns. Special missing .s is assigned if the questions were skipped because the respondent was not selected for a face-to-face interview, was not selected for an enhanced face-to-face interview, or was living in the nursing home. Plain missing (.) is assigned for respondents who did not respond to the current wave.

SwFULLTAN indicates the amount of time the respondent's current wave's spouse held the full-tandem test, and its values are taken from RwFULLTAN. In addition to the special missing codes employed by RwFULLTAN, SwFULLTAN employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwFULLDONE indicates whether the respondent maintained balance for the full 30/60 seconds during the full-tandem standing test. RwFULLDONE is coded as 1 if the respondent maintained balance for the full time, while a 0 indicates the respondent's time fell below the expected time for their age group. Only respondents who maintained the semi-tandem position for the full 10 seconds performed the full-tandem test. Special missing .t is assigned if the respondent was not asked to complete this test because they were unable to complete the semi-tandem standing test. Don't know, refused, or other missing responses for the balance tests are assigned special missing codes .d, .r, .m, respectively. Special missing .x is assigned if the respondent tried to do the test but was unable to do it or received an error message. Special missing .n is assigned if the respondent did not complete the standing tests due to various reasons, including not understanding the instructions, or safety concerns. Special missing .s is assigned if the questions were skipped because the respondent was not selected for a face-to-face interview, was not selected for an enhanced face-to-face interview, or was living in the nursing home. Plain missing (.) is assigned for respondents who did not respond to the current wave.

SwFULLDONE indicates whether the respondent's current wave's spouse maintained balance for the entire full-tandem standing test, and its values are taken from RwFULLDONE. In addition to the special missing codes employed by RwFULLDONE, SwFULLDONE employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwFULLCOMP indicates whether the respondent was willing and able to complete the full-tandem standing test. RwFULLCOMP is coded as 1 if the respondent understood the instructions for the test, the respondent felt it was safe for them to complete the test, and the respondent at least attempted the test. RwFULLCOMP is coded as 0 if the respondent did not understand the instructions, the respondent did not feel safe completing the test, or the respondent did not attempt the test. Only respondents who maintained the semi-tandem position for the full 10 seconds performed the full-tandem test. Special missing .t is assigned if the respondent was not asked to complete this test because they were unable to complete the semi-tandem standing test. Don't know, refused, or other missing responses for the balance tests are assigned special missing codes .d, .r, .m, respectively. Special missing .s is assigned if the questions were skipped because the respondent was not selected for a face-to-face interview, was not selected for an enhanced face-to-face interview, or was living in the nursing home. Plain missing (.) is assigned for respondents who did not respond to the current wave.

SwFULLCOMP indicates whether the respondent's current wave's spouse was willing and able to complete the full-tandem standing test, and its values are taken from RwFULLCOMP. In addition to the special missing codes employed by RwFULLCOMP, SwFULLCOMP employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwSBSTAN indicates the amount of time the respondent held the side-by-side test position in seconds to two decimal places. The respondent was instructed to stand with feet together, side-by-side, for about 10 seconds. The respondent was allowed to use their arms, bend their knees, or move their body to maintain balance. Only respondents who were not able to maintain balance for 10 seconds in the semi-tandem test performed the side-by-side test. Special missing .t is assigned if the respondent was not asked to complete this test because they completed the semi-tandem standing test. Don't know, refused, or other missing responses for the balance tests are assigned special missing codes .d, .r, .m, respectively. Special missing .x is assigned if the respondent tried to do the test but was unable to do it or received an error message. Special missing .n is assigned if the respondent did not complete the standing tests due to various reasons, including not understanding the instructions, or safety concerns. Special missing .s is assigned if the questions were skipped because the respondent was not selected for a face-to-face interview, was not selected for an enhanced face-to-face interview, or was living in the nursing home. Plain missing (.) is assigned for respondents who did not respond to the current wave.

SwSBSTAN indicates the amount of time the respondent's current wave's spouse held the side-by-side test position, and its values are taken from RwSBSTAN. In addition to the special missing codes employed by RwSBSTAN, SwSBSTAN employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwSBSDONE indicates whether the respondent maintained balance for the full 10 seconds of the side-by-side test without stepping out of place or grabbing hold of anything. RwsBSDONE is coded as 1 if the respondent maintained balance for the full time, while a 0 indicates the respondent's time fell below 10 seconds. Only respondents who were not able to maintain balance for 10 seconds in the semi-tandem test performed the side-by-side test. Special missing .t is assigned if the respondent was not asked to complete this test because they completed the semi-tandem standing test. Don't know, refused, or other missing responses for the balance tests are assigned special missing codes .d, .r, .m, respectively. Special missing .x is assigned if the respondent tried to do the test but was unable to do it or received an error message. Special missing .n is assigned if the respondent did not complete the standing tests due to various reasons, including not understanding the instructions, or safety concerns. Special missing .s is assigned if the questions were skipped because the respondent was not selected for a face-to-face interview, was not selected for an enhanced face-to-face interview, or was living in the nursing home. Plain missing (.) is assigned for respondents who did not respond to the current wave.

SwSBSDONE indicates whether the respondent's current wave's spouse maintained balance for the entire side-by-side test, and its values are taken from RwsBSDONE. In addition to the special missing codes employed by RwsBSDONE, SwSBSDONE employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwSBSCOMP indicates whether the respondent was willing and able to complete the side-by-side standing test. RwsBSCOMP is coded as 1 if the respondent understood the instructions for the test, the respondent felt it was safe for them to complete the test, and the respondent at least attempted the test. RwsBSCOMP is coded as 0 if the respondent did not understand the instructions, the respondent did not feel safe completing the test, or the respondent did not attempt the test. Only respondents who were not able to maintain balance for 10 seconds in the semi-tandem test performed the side-by-side test. Special missing .t is assigned if the respondent was not asked to complete this test because they completed the semi-tandem standing test. Don't know, refused, or other missing responses for the balance tests are assigned special missing codes .d, .r, .m, respectively. Special missing .s is assigned if the questions were skipped because the respondent was not selected for a face-to-face interview, was not selected for an enhanced face-to-face interview, or was living in the nursing home. Plain missing (.) is assigned for respondents who did not respond to the current wave.

SwSBSCOMP indicates whether the respondent's current wave's spouse was willing and able to complete the side-by-side test, and its values are taken from RwsBSCOMP. In addition to the special missing codes employed by RwsBSCOMP, SwSBSCOMP employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwBALANCE indicates the highest balance level of the respondent. RwBALANCE is coded as 1 if the respondent did not complete the semi-tandem nor side-by-side test to the maximum time. RwBALANCE is coded as 2 if the respondent did not complete the semi-tandem test to the maximum time, but did complete the side-by-side test to the maximum time. RwBALANCE is coded as 3 if the respondent completed the semi-tandem test to the maximum time, but did not complete the expected full-tandem test time. RwBALANCE is coded as 4 if the respondent completed the semi-tandem test and full-tandem test to the maximum time. Don't know, refused, or other missing responses for the balance tests are assigned special missing codes .d, .r, .m, respectively. Special missing .x is assigned if the respondent tried to do the test but was unable to do it or received an error message. Special missing .n is assigned if the respondent did not complete the standing tests due to various reasons, including not understanding the instructions, and safety concerns. Special missing .s is assigned if the questions were skipped because the respondent was not selected for a face-to-face interview, was not selected for an enhanced face-to-face interview, or was living in the nursing home. Plain missing (.) is assigned for respondents who did not respond to the current wave.

SwBALANCE indicates the assigned highest balance level of the respondent's current wave's spouse, and its values are taken from RwBALANCE. In addition to the special missing codes employed by RwBALANCE, SwBALANCE employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwBALFLR indicates the floor surface for the respondent's side-by-side or full-tandem balance tests. RwBALFLR is coded as follows: 1.linoleum/tile/wood, 2.low-pile carpet, 3.high-pile carpet, 4.concrete, 5.other. RwBALFLR is not available from Wave 12 onwards. Don't know, refused, or other missing responses for the balance tests are assigned special missing codes .d, .r, .m, respectively. Special missing .n is assigned if the respondent did not complete the measurements due to various reasons, including the respondent did not understand the instructions and safety concerns. Special missing .s is assigned if the questions were skipped because the respondent was not selected for a face-to-face interview, was not selected for an enhanced face-to-face interview, or was living in the nursing home. Plain missing (.) is assigned for respondents who did not respond to the current wave.

SwBALFLR indicates the floor surface used during the respondent's current wave's spouse's balance tests, and its values are taken from RwBALFLR. In addition to the special missing codes employed by RwBALFLR, SwBALFLR employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwBALCOMPL indicates the level of compliance displayed by the respondent during the balance tests. RwBALCOMPL is coded as follows: 1.compliant if respondents are fully compliant, 2.justified non-compliant if their non-compliance is justified by illness, pain or other symptoms or discomfort and 3.unjustified non-compliant if their non-compliance is due to no obvious reason. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, .m, respectively. Special missing .n is assigned if the respondent did not complete the side-by-side or full-tandem balance tests due to a variety of reasons, including safety concerns, or the respondent did not understand the instructions. Special missing .s is assigned if the physical measure questions were skipped because the respondent was not selected for a face-to-face interview, was not selected for an enhanced face-to-face interview, or was living in the nursing home. RwBALCOMPL is set to plain missing (.) for respondents who did not respond to the current wave.

SwBALCOMPL indicates the respondent's current wave's spouse's compliance level during the side-by-side or full-tandem balance tests, and is taken from RwBALCOMPL. In addition to the special missing codes employed by RwBALCOMPL, SwBALCOMPL employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwSEMITANC, RwFULLTANC and RwSBSTANC indicate whether the respondent used compensatory movements during the semi-tandem, full-tandem or side-by-side standing tests. RwSEMITANC, RwFULLTANC and RwSBSTANC are coded as 1 if the respondent used compensatory movements during the test, while a 0 indicates that the respondent did not use them. Don't know, refused, or other missing responses for the balance tests are assigned special missing codes .d, .r, .m, respectively. Special missing .x is assigned if the respondent tried to do the test but was unable to do it. Special missing .n is assigned if the respondent did not complete the standing tests due to various reasons, including not understanding the instructions, or

safety concerns. Special missing .s is assigned if the questions were skipped because the respondent was not selected for a face-to-face interview, was not selected for an enhanced face-to-face interview, or was living in the nursing home. Plain missing (.) is assigned for respondents who did not respond to the current wave.

SwSEMITANC, SwFULLTANC and SwSBSTANC indicate whether the respondent's current wave's spouse used compensatory movements during the semi-tandem, full-tandem or side-by-side standing tests, and their values are taken from RwSEMITANC, RwfFULLTANC and RwsSBSTANC. In addition to the special missing codes employed by RwSEMITANC, RwfFULLTANC and RwsSBSTANC, SwSEMITANC, SwFULLTANC and SwSBSTANC employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

The balancing tests began in Wave 8.

Starting in Wave 12, there are additional screening questions asking about any problems that might prevent the respondent from standing up from a chair and balancing and their willingness to proceed with these tests which determine whether the respondent participates in the balancing tests.

The floor the respondent completed the balance tests on and their compliance with the balance tests are no longer surveyed starting in Wave 12.

No physical measures were collected in Wave 15 as a result of the COVID-19 pandemic.

## HRS Variables Used:

### Wave 8:

KA028	r in nursing home
KI800	physical measures ftf iw
KI802	physical measures consent form
KI876	balance test - semi-tandem stand
KI879	balance test semi-tandem hold full time
KI880	balance test semi-tandem time
KI883	balance test s-b-s complete
KI886	balance test s-b-s hold full time
KI887	balance test side-by-side time
KI889	balance test s-b-s floor surface
KI891	balance test s-b-s compliance
KI896	balance test full tandem hold full time
KI897	balance test full tandem time
KI899	balance test full tandem floor surface
KI902	balance test full tandem compliance

### Wave 9:

LA028	r in nursing home
LI800	physical measures ftf iw
LI802	physical measures consent form
LI876	balance test - semi-tandem stand

### How Constructed:

RwBALSFT, RwBALREF, RwBALTRYU, RwbALEQUP, and RwbALOTHR indicate the reasons for the respondent not taking part in any of the balance tests (semi-tandem stand, side-by-side stand, and full-tandem stand) as reported by the interviewer. The interviewer is asked to report all of the reasons the respondent did not complete each of the balance tests they were asked to complete. RwbALSFT indicates whether the respondent

did not participate in at least one of the balance tests because they felt it would not be safe, the interviewer felt it would be unsafe, or due to surgery, injury, or another health condition. RwbALREF indicates whether the respondent did not participate in at least one of the balance tests because they refused, with no reason given. RwbALTRYU indicates whether the respondent did not participate in at least one of the balance tests because they tried but were unable to complete the tests. RwbALEQUP indicates whether the respondent did not participate in at least one of the balance tests because of either problems with equipment/supplies or not having a suitable space to perform the tests. RwbALOTHR indicates whether the respondent did not participate in at least one of the balance tests because either they did not understand the instructions or because of another reason. RwbALSFT, RwbALREF, RwbALTRYU, RwbALEQUP, and RwbALOTHR are coded as 0 if the specific reason was not given for the respondent not completing any of the balance tests, and are coded as 1 if the specific reason was given. Don't know, refuse, and other missing responses to RwbALSFT, RwbALREF, RwbALTRYU, RwbALEQUP, and RwbALOTHR are set to special missing .d, .r, and .m, respectively. Special missing .c is assigned if the respondent completed at least one of the balance tests. Special missing .s is assigned if the physical measure questions were skipped because the respondent was not selected for a face-to-face interview, was not selected for an enhanced face-to-face interview, or was living in the nursing home. Responses are set to blank missing (.) when the respondent does not participate in the current wave.

SwBALSFT, SwBALREF, SwBALTRYU, SwBALEQUP, and SwBALOTHR indicate the reasons for the respondent's current wave's spouse not taking part in any of the balance tests, and their values are taken from the spouse's values to RwbALSFT, RwbALREF, RwbALTRYU, RwbALEQUP, and RwbALOTHR. In addition to the special missing codes employed by RwbALSFT, RwbALREF, RwbALTRYU, RwbALEQUP, and RwbALOTHR, SwBALSFT, SwBALREF, SwBALTRYU, SwBALEQUP, and SwBALOTHR employ two additional special missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

The balance tests began in Wave 8.

The wording for one of the options used to create RwbALSFT changes slightly across waves. In Wave 8 and starting again in Wave 12, the wording is "R had surgery, injury or other health condition that prevented R from standing". In Waves 9 through 11, the wording is "R had surgery, injury, or other health condition that prevented R from completing the test".

The wording of and options used to create RwbALEQUP change across waves. In Wave 8, the only option applicable to this variable is "unsuitable location". In Waves 9 through 11, the wording for this option is changed to "no suitable space". Waves 9 through 11 add the option of "problem with equipment or supplies". From Wave 12 onwards, there is no option for the suitability of the location and problems with equipment. Because problems with equipment/supplies or not having a suitable space to perform the test are not listed as reasons why the respondent did not participate in the balance tests, RwbALEQUP and SwBALEQUP are not available starting in Wave 12.

Starting in Wave 12, there are additional screening questions asking about any problems that might prevent the respondent from standing up from a chair and balancing and their willingness to proceed with these tests which determine whether the respondent participates in the balancing tests.

No physical measures were collected in Wave 15 as a result of the COVID-19 pandemic.

### How Constructed:

RwWSPEED1 and RwWSPEED2 indicate the first and second walking speed of the respondent across a 98.5 inch course set up in a 12 foot, non-carpeted area. RwWSPEED indicates the average of the first and second walking speed of the respondent. Don't know, refused, or other missing responses for the walking tests are assigned special missing codes .d, .r, .m, respectively. Special missing .i is assigned if the total time is reported as more than 100 seconds. Special missing .i is also assigned if the value of the walking speed measurements was given as invalid in Wave 7. Special missing .x is assigned if the respondent tried to do the test but was unable to do it or received an error message. Special missing .n is assigned if the respondent did not complete the measurements due to various reasons, including the respondent did not understand the instructions and safety concerns. Special missing .s is assigned if the questions were skipped because the respondent was not selected for a face-to-face interview, was not selected for an enhanced face-to-face interview, or was living in the nursing home. In Wave 7, special missing .s is also assigned if the respondent was not selected for the walking speed tests. Starting in Wave 8, special missing .s is also assigned if the respondent was under age 64. Plain missing (.) is assigned for respondents who did not respond to the current wave.

SwWSPEED1, SwWSPEED2 and SwWSPEED indicate the first, second, and average walking speed of the current wave's spouse, and are taken from the spouse's values to RwWSPEED1, RwWSPEED2, and RwWSPEED. In addition to the special missing codes used for RwWSPEED1, RwWSPEED2, and SwWSPEED, SwWSPEED1, SwWSPEED2 and SwWSPEED employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwWALKCOMP indicates whether the respondent was willing and able to complete the walking speed test. RwWALKCOMP is coded as 1 if the respondent did not report problems from recent surgery, injury, or other health conditions that might prevent them from walking, the respondent understood the instructions, the respondent felt safe doing the test, and the respondent at least attempted the walking test. RwWALKCOMP is coded as 0 if the respondent had health conditions that might prevent them from walking, the respondent did not understand the instructions, the respondent did not feel safe doing the test, or the respondent did not attempt the walking test. Don't know, refused, or other missing responses for the walking tests are assigned special missing codes .d, .r, .m, respectively. Special missing .s is assigned if the questions were skipped because the respondent was not selected for a face-to-face interview, was not selected for an enhanced face-to-face interview, or was living in the nursing home. In Wave 7, special missing .s is also assigned if the respondent was not selected for the walking speed tests. Starting in Wave 8, special missing .s is also assigned if the respondent was under age 64. Plain missing (.) is assigned for respondents who did not respond to the current wave.

SwWALKCOMP indicates whether the respondent's current wave's spouse was willing and able to complete the walking speed test, and its values are taken from RwWALKCOMP. In addition to the special missing codes employed by RwWALKCOMP, SwWALKCOMP employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value

.v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwWALKFLR indicates the floor surface for the respondent's walking speed tests. RwWALKFLR is coded as follows: 1.linoleum/tile/wood, 2.low-pile carpet, 3.high-pile carpet, 4.concrete, 5.other. RwWALKFLR is not available from Wave 12 onwards. RwWALKAID indicates what type of aid the respondent used during the walking speed tests. RwWALKAID is coded as follows: 1.none, 2.walking stick or cane, 3.elbow crutches, 4.walking frame, 5.other. Don't know, refused, or other missing responses for the balance tests are assigned special missing codes .d, .r, .m, respectively. Special missing .n is assigned if the respondent did not complete the measurements due to various reasons, including the respondent did not understand the instructions and safety concerns. Special missing .s is assigned if the questions were skipped because the respondent was not selected for a face-to-face interview, was not selected for an enhanced face-to-face interview, or was living in the nursing home. In Wave 7, special missing .s is also assigned if the respondent was not selected for the walking speed tests. Starting in Wave 8, special missing .s is also assigned if the respondent was under age 64. Plain missing (.) is assigned for respondents who did not respond to the current wave.

SwWALKFLR and SwWALKAID indicate the floor surface and walking aid used during the respondent's current wave's spouse's walking speed tests, and their values are taken from RwWALKFLR and RwWALKAID. In addition to the special missing codes employed by RwWALKFLR and RwWALKAID, SwWALKFLR and SwWALKAID employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwWALKCOMPL indicates the level of compliance displayed by the respondent during the walking speed tests. RwWALKCOMPL is coded as follows: 1.compliant if respondents are fully compliant, 2.justified non-compliant if their non-compliance is justified by illness, pain or other symptoms or discomfort and 3.unjustified non-compliant if their non-compliance is due to no obvious reason. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, .m, respectively. Special missing .n is assigned if the respondent did not complete the walking speed tests due to a variety of reasons, including safety concerns, or the respondent did not understand the instructions. Special missing .s is assigned if the physical measure questions were skipped because the respondent was not selected for a face-to-face interview, was not selected for an enhanced face-to-face interview, or was living in the nursing home. RwWALKCOMPL is set to plain missing (.) for respondents who did not respond to the current wave.

SwWALKCOMPL indicates the respondent's current wave's spouse's compliance level during the walking speed tests, and is taken from RwWALKCOMPL. In addition to the special missing codes employed by RwWALKCOMPL, SwWALKCOMPL employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwWALKDIR indicates whether the respondent followed the directions given during the walking speed tests and to what degree. RwWALKDIR is coded as follows: 1.followed directions, if respondents are fully compliant and followed the directions correctly, 2.walked not at a normal pace, if the respondents did not walk at a normal pace, and 3.not walked beyond end of course, if the respondent stopped at the end of the course. A value of 4.other is assigned to other levels of compliance with the directions. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, .m, respectively. Special missing .n is assigned if the respondent did not complete the walking speed tests due to a variety of reasons, including safety concerns, or the respondent did not understand the instructions. Special missing .s is assigned if the physical measure questions were skipped because the respondent was not selected for a face-to-face interview, was not selected for an enhanced face-to-face interview, or was living in the nursing home. RwWALKDIR is set to plain missing (.) for respondents who did not respond to the current wave.

SwWALKDIR indicates whether the respondent's current wave's spouse's followed the directions given during the walking speed tests and to what degree, and is taken from RwWALKDIR. In addition to the special missing codes employed by RwWALKDIR, SwWALKDIR employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Physical measures began in Wave 7, but they were only given to a random subsample of approximately 3300 respondents. Of this subsample, a smaller subsample was given the walking speed tests. Walking speed tests were given to a larger sample of respondents starting in Wave 8.

If the respondent was selected for some physical measures but not the walking speed tests in Wave 7, then special missing .s is assigned. Starting in Wave 8, if the walking speed tests were not performed because the respondent was under age 64, then special missing .s is assigned.

Special missing .i for HRS-reported "invalid" values in RwwSPEED1, RwwSPEED2, and RwwSPEED is only used in Wave 7.

Starting in Wave 12, there are additional screening questions asking about any problems that might prevent the respondent from walking and their understanding of the directions and feelings of safety in completing these tests which determine whether the respondent participates in the walking tests.

The interviewer is no longer asked about the type of floor used during the walking test starting in Wave 12.

In Waves 8 through 11, the interviewer is asked to rate the respondent's compliance during the walking speed tests. Starting in Wave 12, the interviewer is asked to rate how well the respondent's followed the directions given for the walking speed tests.

No physical measures were collected in Wave 15 as a result of the COVID-19 pandemic.

## HRS Variables Used:

### Wave 7:

JA009	proxy/self interview
JA028	r in nursing home
JI800	physical measures ftf iw
JI801	certified physical measures
JI802	physical measures consent form
JI820	walking test complete at least one trial
JI823	walking test first trial time
JI824	walking test second trial time
JI825	walking test- type of floor surface
JI828	walking test- type of aid used
JI850	physical measure assignment
JZ227	selected phy measures module

### Wave 8:

KA019	r current age calculation
KA028	r in nursing home
KI800	physical measures ftf iw
KI802	physical measures consent form
KI820	walking test complete at least one trial
KI823	walking test 1st trial time
KI824	walking test 2nd trial time
KI825	walking test floor surface
KI828	walking aid type
KI830	walking test r effort

### Wave 9:

LA019	r current age calculation
LA028	r in nursing home
LI800	physical measures ftf iw
LI802	physical measures consent form
LI820	walking test complete at least one trial
LI823	walking test 1st trial time
LI824	walking test 2nd trial time
LI825	t walk floor surface
LI828	walking aid type

LI830 walking test r effort

Wave 10:

MA019 r current age calculation  
MA028 r in nursing home  
MI800 physical measures ftf iw  
MI802 physical measures consent  
MI820 walking test complete at least one trial  
MI823 walking test 1st trial time  
MI824 walking test 2nd trial time  
MI825 t walk floor surface  
MI828 walking aid type  
MI830 walking test r effort

Wave 11:

NA019 r current age calculation  
NA028 r in nursing home  
NI800 physical measures ftf iw  
NI802 physical measures consent  
NI820 walking test complete at least one trial  
NI823 walking test 1st trial time  
NI824 walking test 2nd trial time  
NI825 t walk floor surface  
NI828 walking aid type  
NI830 walking test r effort

Wave 12:

OA019 r current age calculation  
OA028 r in nursing home  
OI800 physical measures ftf iw  
OI802 physical measures consent  
OI820 walking test complete at least one trial  
OI823 walking test 1st trial time  
OI824 walking test 2nd trial time  
OI828 walking aid type  
OI977 walking speed screening question  
OI978 r understanding of walking speed procedure

Wave 13:

PA019 r current age calculation  
PA028 r in nursing home  
PI800 physical measures ftf iw  
PI802 physical measures consent  
PI820 walking test complete at least one trial  
PI823 walking test 1st trial time  
PI824 walking test 2nd trial time  
PI828 walking aid type  
PI977 walking speed screening question  
PI978 r understanding of walking speed procedure

Wave 14:

QA019 r current age calculation  
QA028 r in nursing home  
QI800 physical measures ftf iw  
QI802 physical measures consent  
QI820 walking test complete at least one trial  
QI823 walking test 1st trial time  
QI824 walking test 2nd trial time  
QI828 walking aid type  
QI977 walking speed screening question  
QI978 r understanding of walking speed procedure

### How Constructed:

RwWALKSFT, RwWALKREF, RwWALKTRYU, RwWALKEQUP, and RwWALKOTHR indicate the reasons for the respondent not taking part in the walking tests as reported by the interviewer. The interviewer is asked to report all of the reasons the respondent did not complete the walking tests. RwWALKSFT indicates whether the respondent did not participate in the walking tests because they felt it would not be safe, the interviewer felt it would be unsafe, or due to surgery, injury, or another health condition that prevented the respondent from walking. RwWALKREF indicates whether the respondent did not participate in the walking tests because they refused, with no reason given. RwWALKTRYU indicates whether the respondent did not participate in the walking tests because they tried but were unable to complete the tests. RwWALKEQUP indicates whether the respondent did not participate in the walking tests because of either problems with equipment/supplies or not having a suitable space to perform the tests. RwWALKOTHR indicates whether the respondent did not participate in the walking tests because either they did not understand the instructions or because of another reason. RwWALKSFT, RwWALKREF, RwWALKTRYU, RwWALKEQUP, and RwWALKOTHR are coded as 0 if the specific reason was not given for the respondent not completing the walking tests, and are coded as 1 if the specific reason was given. Special missing .c is assigned if the respondent completed at least one of the walking tests. Don't know, refuse, and other missing responses to RwWALKSFT, RwWALKREF, RwWALKTRYU, RwWALKEQUP, and RwWALKOTHR are set to special missing .d, .r, and .m, respectively. Special missing .s is assigned if the physical measure questions were skipped because the respondent was not selected for a face-to-face interview, was not selected for an enhanced face-to-face interview, or was living in the nursing home. Starting in Wave 8, special missing .s is also assigned if the respondent was under age 64. Responses are set to blank missing (.) when the respondent does not participate in the current wave.

SwWALKSFT, SwWALKREF, SwWALKTRYU, SwWALKEQUP, and SwWALKOTHR indicate the reasons for the respondent's current wave's spouse not taking part in the walking tests, and their values are taken from the spouse's values to RwWALKSFT, RwWALKREF, RwWALKTRYU, RwWALKEQUP, and RwWALKOTHR. In addition to the special missing codes employed by RwWALKSFT, RwWALKREF, RwWALKTRYU, RwWALKEQUP, and RwWALKOTHR, SwWALKSFT, SwWALKREF, SwWALKTRYU, SwWALKEQUP, and SwWALKOTHR employ two additional special missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

### Cross Wave Differences in HRS

Physical measures began in Wave 7, but they were only given to a random subsample of approximately 3300 respondents. Of this subsample, a smaller subsample was given the walking speed tests. Walking speed tests were given to a larger sample of respondents starting in Wave 8.

If the respondent was selected for some physical measures but not the walking speed tests in Wave 7, then special missing .s is assigned. Starting in Wave 8, if the walking speed tests were not performed because the respondent was under age 64, then special missing .s is assigned.

The wording of and options used to create RwWALKEQUP change across waves. In Wave 7, the available options include "no suitable space" and "problem with equipment and/or consent form." In Wave 8, the wording for the latter option changes to "problem with equipment and or supplies". In Waves 9 through 13, the wording is "problem with equipment or supplies". In Wave 14, the option included is "no suitable space available".

Starting in Wave 12, there are additional screening questions asking about any problems that might prevent the respondent from walking and their understanding of the directions and feelings of safety in completing these tests which determine whether the respondent participates in the walking tests.

No physical measures were collected in Wave 15 as a result of the COVID-19 pandemic.

### HRS Variables Used:

#### Wave 7:

JI820	walking test complete at least one trial
JI821M1	reason not complete walking test-1
JI821M2	reason not complete walking test-2
JI821M3	reason not complete walking test-3
JI821M4	reason not complete walking test-4

#### Wave 8:

KI820	walking test complete at least one trial
KI821M1	walking test reason not complete-1
KI821M2	walking test reason not complete-2
KI821M3	walking test reason not complete-3
KI821M4	walking test reason not complete-4

#### Wave 9:

LI820	walking test complete at least one trial
LI821M1	walking test reason not complete -1
LI821M2	walking test reason not complete -2
LI821M3	walking test reason not complete -3
LI821M4	walking test reason not complete -4
LI821M5	walking test reason not complete -5

#### Wave 10:

MI820	walking test complete at least one trial
MI821M1	walking test reason not complete -1
MI821M2	walking test reason not complete -2
MI821M3	walking test reason not complete -3
MI821M4	walking test reason not complete -4

#### Wave 11:

NI820	walking test complete at least one trial
NI821M1	walking test reason not complete -1
NI821M2	walking test reason not complete -2
NI821M3	walking test reason not complete -3
NI821M4	walking test reason not complete -4

#### Wave 12:

OI820	walking test complete at least one trial
OI821M1	walking test reason not complete -1
OI821M2	walking test reason not complete -2
OI821M3	walking test reason not complete -3
OI821M4	walking test reason not complete -4
OI821M5	walking test reason not complete -5

#### Wave 13:

PI820	walking test complete at least one trial
PI821M1	walking test reason not complete -1
PI821M2	walking test reason not complete -2
PI821M3	walking test reason not complete -3
PI821M4	walking test reason not complete -4
PI821M5	walking test reason not complete -5

Wave 14:

QI820	walking test complete at least one trial
QI821M1	walking test reason not complete -1
QI821M2	walking test reason not complete -2
QI821M3	walking test reason not complete -3
QI821M4	walking test reason not complete -4
QI821M5	walking test reason not complete -5

## How Constructed:

RwMHEIGHT, RwMWEIGHT and RwMWAIST indicate the respondent's measured height in meters, measured weight in kilograms and measured waist circumference in centimeters, respectively. In the HRS, height is collected in inches and converted to meters. If the reported height is between 4 and 7, then we assume that their height has been reported in feet rather than inches and is converted to meters. Weight is collected in pounds and converted to kilograms. Waist circumference is collected in inches and converted to centimeters. RwMBMI is the respondent's body mass index and it is derived by dividing the respondent's measured weight (kg) by the squared value of their measured height. Don't know, refused, or other missing responses of height, weight and waist measurements are assigned special missing codes .d, .r, .m, respectively. Special missing .x is assigned if the respondent tried to do the test but was unable to do it or received an error message. Special missing .n is assigned if the respondent did not complete the measurements due to safety concerns. Special missing .s is assigned if the questions were skipped because the respondent was not selected for a face-to-face interview, was not selected for an enhanced face-to-face interview, or was living in the nursing home. In Wave 7, special missing .s is also assigned if the respondent was not selected for the height or weight measurements. Plain missing (.) is assigned for respondents who did not respond to the current wave.

SwMHEIGHT, SwMWEIGHT, SwMWAIST and SwMBMI indicate the measured height, weight, waist circumference, and body mass index of the current wave's spouse, respectively. Their values are taken from the spouse's values to RwMHEIGHT, RwMWEIGHT, RwMWAIST and RwMBMI. In addition to the special missing codes used for RwMHEIGHT, RwMWEIGHT, RwMWAIST and RwMBMI, SwMHEIGHT, SwMWEIGHT, SwMWAIST and SwMBMI employ two additional missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Please note that some extreme values may be present in RwMHEIGHT, RwMWEIGHT, RwMWAIST, and RwMBMI and have been left to the discretion of the user. It may be useful to reference the following document for further consideration: [Physical Measures And Biomarkers](#).

RwMBMICAT indicates the respondent's measured BMI category according to WHO standards. RwMBMICAT is coded as follows: 1.underweight, less than 18.5, 2.normal weight, 18.5 to 24.9, 3.pre-obesity, 25 to 25.9, 4.obesity class 1, 30 to 34.9, 5.obesity class 2, 35 to 39.9, 6.obesity class 3, greater than 40. RwMOBESE indicates whether the respondent's BMI is categorized as measured obese, meaning a BMI of 30 or greater. RwMOBESE is coded as 0.no, and 1.yes. Don't know, refused, or other missing responses of RwMBMICAT and RwMOBESE are assigned special missing codes .d, .r, and .m, respectively. Special missing .x is assigned if the respondent tried to do the height or weight test but was unable to do it or received an error message. Special missing .n is assigned if the respondent did not complete either one of the height or weight measurements due to safety concerns. Special missing .s is assigned if the questions were skipped because the respondent was not selected for a face-to-face interview, was not selected for an enhanced face-to-face interview, or was living in the nursing home. In Wave 7, special missing .s is also assigned if the respondent was not selected for the height or weight measurements. These variables are set to plain missing (.) for respondents who did not participate in the current wave.

SwBMICAT and SwOBESE indicate the respondent's current wave's spouse's reported BMI category and obesity status, and are taken from RwBMICAT and RwOBESE. In addition to the special missing codes employed by RwBMICAT and RwOBESE, SwBMICAT and SwOBESE employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwHTCOMP indicates whether the respondent was willing and able to complete the height measurement. RwWTCOMP indicates whether the respondent was willing and able to complete the weight measurement.

RwWATCOMP indicates whether the respondent was willing and able to complete the waist circumference measurement. RwHTCOMP, RwWTCOMP, and RwWATCOMP are coded as 1 if the respondent understood the directions for the measurement, felt it was safe to participate in the test, the respondent was able to stand, and the respondent completed the measurement. RwHTCOMP, RwWTCOMP, and RwWATCOMP are coded as 0 if the respondent did not understand the directions, did not feel it would be safe to participate in the test, or the respondent did not complete the measurement. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, .m, respectively. Special missing .s is assigned if the questions were skipped because the respondent was not selected for a face-to-face interview, was not selected for an enhanced face-to-face interview, or was living in the nursing home. In Wave 7, special missing .s is also assigned if the respondent was not selected for the height measurement. Plain missing (.) is assigned for respondents who did not respond to the current wave.

SwHTCOMP indicates whether the respondent's current wave's spouse was willing and able to complete the height measurement, and its values are taken from RwHTCOMP. SwWTCOMP indicates whether the respondent's current wave's spouse was willing and able to complete the weight measurement, and its values are taken from RwWTCOMP. SwWATCOMP indicates whether the respondent's current wave's spouse was willing and able to complete the waist circumference measurement, and its values are taken from RwWATCOMP. In addition to the special missing codes employed by RwHTCOMP, RwWTCOMP, and RwWATCOMP, SwHTCOMP, SwWTCOMP, and SwWATCOMP employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwHTCOMPL, RwWTCOMPL and RwWATCOMPL indicate, respectively, the level of compliance displayed by the respondent during the height, weight and waist measurements. RwHTCOMPL, RwWTCOMPL and RwWATCOMPL are coded as follows: 1.compliant if respondents are fully compliant, 2.justified non-compliant if their non-compliance is justified by illness, pain or other symptoms or discomfort and 3.unjustified non-compliant if their non-compliance is due to no obvious reason. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, .m, respectively. Special missing .n is assigned if the respondent did not complete the height, weight or waist measurement due to a variety of reasons, including safety concerns, or the respondent did not understand the instructions. Special missing .s is assigned if the physical measure questions were skipped because the respondent was not selected for a face-to-face interview, was not selected for an enhanced face-to-face interview, or was living in the nursing home. RwHTCOMPL, RwWTCOMPL and RwWATCOMPL are set to plain missing (.) for respondents who did not respond to the current wave.

SwHTCOMPL, SwWTCOMPL and SwWATCOMPL indicate, respectively, the respondent's current wave's spouse's compliance level during the height, weight and waist measurements, and are taken from RwHTCOMPL, RwWTCOMPL and RwWATCOMPL. In addition to the special missing codes employed by RwHTCOMPL, RwWTCOMPL and RwWATCOMPL, SwHTCOMPL, SwWTCOMPL and SwWATCOMPL employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwHTFLR indicates the type of floor surface the respondent was standing on when the height measurement was taken. RwWTFLR indicates the type of floor surface the scale was placed on when weight measurement was taken. RwHTFLR and RwWTFLR are coded as follows: 1.linoleum/tile/wood, 2.low-pile carpet, 3.high-pile carpet, 4.concrete, 5.other. RwHTFLR is not available from Wave 12 onwards. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, .m, respectively. Special missing .n is assigned if the respondent did not complete the measurements due to safety concerns. Special missing .s is assigned if the questions were skipped because the respondent was not selected for a face-to-face interview, was not selected for an enhanced face-to-face interview, or was living in the nursing home. In Wave 7, special missing .s is also assigned if the respondent was not selected for the height measurement. Plain missing (.) is assigned for respondents who did not respond to the current wave.

SwHTFLR indicates the type of floor surface the respondent's current wave's spouse was standing on for the height measurement, and its values are taken from RwHTFLR. SwWTFLR indicates the type of floor surface the scale was placed on for the respondent's current wave's spouse's weight measurement, and its values are taken from RwWTFLR. In addition to the special missing codes employed by RwHTFLR and RwWTFLR, SwHTFLR and SwWTFLR employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwSHOEH and RwSHOEW indicate whether the respondent was wearing shoes during the height measurement and the weight measurement, respectively. RwSHOEH and RwSHOEW are coded as 1 if the respondent was wearing shoes, while a 0 indicates the respondent was not wearing shoes. RwbULKY indicates whether the respondent was wearing bulky clothes during the waist circumference measurement. RwbULKY is coded as 1 if the respondent was wearing bulky clothes, while a 0 indicates that they were not wearing bulky clothes during the waist circumference measurement. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, .m, respectively. Special missing .s is assigned if the questions were skipped because the respondent was not selected for a face-to-face interview, was not selected for an enhanced face-to-face interview, or was living in the nursing home. In Wave 7, special missing .s is also assigned if the respondent was not selected for the height or weight measurements. Plain missing (.) is assigned for respondents who did not respond to the current wave.

SwSHOEH and SwSHOEW indicate whether the current wave's spouse was wearing shoes during the height measurement and weight measurement, respectively. SwBULKY indicates whether the current wave's spouse was wearing bulky cloths during the waist circumference measurement. Their values are taken from the spouse's values to RwSHOEH, RwSHOEW and RwbULKY. In addition to the special missing codes used for RwSHOEH, RwSHOEW and RwbULKY, SwSHOEH, SwSHOEW and SwBULKY employ two additional missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

### Cross Wave Differences in HRS

Physical measure tests began in Wave 7, but they were only given to a random subsample of approximately 3300 respondents. Of this subsample, smaller subsamples were given the height or weight measurements. Height and weight measurements were given to a larger sample of respondents starting in Wave 8.

Waist circumference was not measured until Wave 8.

If the respondent was selected for some physical measures but not the height or weight measurements in Wave 7, then special missing .s is assigned.

Starting in Wave 12, there are additional screening questions asking about the respondent's understanding of the directions and feelings of safety in completing these measurements which determine whether the respondent participates in the height, weight, and waist measurements.

The interviewer is no longer asked to report the type of floor the respondent's height was measured on starting in Wave 12.

RwHTCOMPL, RwwTCOMPL and RwwATCOMPL are available starting in Wave 8 until Wave 11.

No physical measures were collected in Wave 15 as a result of the COVID-19 pandemic.

### HRS Variables Used:

#### Wave 7:

JA009	proxy/self interview
JA028	r in nursing home
JI800	physical measures ftf iw
JI801	certified physical measures
JI802	physical measures consent form
JI831	r height

### How Constructed:

RwHGHTSFT, RwHGHTREF, RwHGHTTRYU, RwHGHTEQUP, and RwHGHTOTHR indicate the reasons for the respondent not taking part in the height measurement as reported by the interviewer. The interviewer is asked to report all of the reasons the respondent did not complete the height measurement. RwHGHTSFT indicates whether the respondent did not participate in the height measurement because they felt it would not be safe, the interviewer felt it would be unsafe, or the respondent had a health condition that prevented them from standing. RwHGHTREF indicates whether the respondent did not participate in the height measurement because they refused, with no reason given. RwHGHTTRYU indicates whether the respondent did not participate in the height measurement because they tried but were unable to complete the measurement. RwHGHTEQUP indicates whether the respondent did not participate in the height measurement because of problems with equipment/supplies, not having a suitable space to perform the measurement, or the

respondent was too tall for the interviewer to reach. RWHGHTOTHR indicates whether the respondent did not participate in the height measurement because either they did not understand the instructions or because of another reason. RWHGHTSFT, RWHGHTREF, RWHGHTTRYU, RWHGHTEQUP, and RWHGHTOTHR are coded as 0 if the specific reason was not given for the respondent not completing the height measurement, and are coded as 1 if the specific reason was given. Don't know, refuse, and other missing responses to RWHGHTSFT, RWHGHTREF, RWHGHTTRYU, RWHGHTEQUP, and RWHGHTOTHR are set to special missing .d, .r, and .m, respectively. Special missing .c is assigned if the respondent completed the height measurement. Special missing .s is assigned if the physical measure questions were skipped because the respondent was not selected for a face-to-face interview, was not selected for an enhanced face-to-face interview, or was living in the nursing home. In Wave 7, special missing .s is assigned if the height measurement was not taken because the respondent was not in the sample selected for the height measurement. Responses are set to blank missing (.) when the respondent does not participate in the current wave.

SWHGHTSFT, SWHGHTREF, SWHGHTTRYU, SWHGHTEQUP, and SWHGHTOTHR indicate the reasons for the respondent's current wave's spouse not taking part in the height measurement, and their values are taken from the spouse's values to RWHGHTSFT, RWHGHTREF, RWHGHTTRYU, RWHGHTEQUP, and RWHGHTOTHR. In addition to the special missing codes employed by RWHGHTSFT, RWHGHTREF, RWHGHTTRYU, RWHGHTEQUP, and RWHGHTOTHR, SWHGHTSFT, SWHGHTREF, SWHGHTTRYU, SWHGHTEQUP, and SWHGHTOTHR employ two additional special missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RWWGHTSFT, RWWGHTREF, RWWGHTTRYU, RWWGHTEQUP, and RWWGHTOTHR indicate the reasons for the respondent not taking part in the weight measurement as reported by the interviewer. The interviewer is asked to report all of the reasons the respondent did not complete the weight measurement. RWWGHTSFT indicates whether the respondent did not participate in the weight measurement because they felt it would not be safe, the interviewer felt it would be unsafe, or the respondent was not able to stand or balance on the scale. RWWGHTREF indicates whether the respondent did not participate in the weight measurement because they refused, with no reason given. RWWGHTTRYU indicates whether the respondent did not participate in the weight measurement because they tried but were unable to complete the measurement. RWWGHTEQUP indicates whether the respondent did not participate in the weight measurement because of problems with equipment/supplies, not having a suitable space to perform the measurement, or the respondent was too heavy to attempt the weight measurement. RWWGHTOTHR indicates whether the respondent did not participate in the weight measurement because either they did not understand the instructions or because of another reason. RWWGHTSFT, RWWGHTREF, RWWGHTTRYU, RWWGHTEQUP, and RWWGHTOTHR are coded as 0 if the specific reason was not given for the respondent not completing the weight measurement, and are coded as 1 if the specific reason was given. Don't know, refuse, and other missing responses to RWWGHTSFT, RWWGHTREF, RWWGHTTRYU, RWWGHTEQUP, and RWWGHTOTHR are set to special missing .d, .r, and .m, respectively. Special missing .c is assigned if the respondent completed the weight measurement. Special missing .s is assigned if the physical measure questions were skipped because the respondent was not selected for a face-to-face interview, was not selected for an enhanced face-to-face interview, or was living in the nursing home. In Wave 7, special missing .s is assigned if the weight measurement was not taken because the respondent was not in the sample selected for the weight measurement. Responses are set to blank missing (.) when the respondent does not participate in the current wave.

SWWGHTSFT, SWWGHTREF, SWWGHTTRYU, SWWGHTEQUP, and SWWGHTOTHR indicate the reasons for the respondent's current wave's spouse not taking part in the weight measurement, and their values are taken from the spouse's values to RWWGHTSFT, RWWGHTREF, RWWGHTTRYU, RWWGHTEQUP, and RWWGHTOTHR. In addition to the special missing codes employed by RWWGHTSFT, RWWGHTREF, RWWGHTTRYU, RWWGHTEQUP, and RWWGHTOTHR, SWWGHTSFT, SWWGHTREF, SWWGHTTRYU, SWWGHTEQUP, and SWWGHTOTHR employ two additional special missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RWWSTSFT, RWWSTREF, RWWSTTRYU, RWWSTEQUP, and RWWSTOTHR indicate the reasons for the respondent not taking part in the waist measurement as reported by the interviewer. The interviewer is asked to report all of the reasons the respondent did not complete the waist measurement. RWWSTSFT indicates whether the respondent did not participate in the waist measurement because they felt it would not be safe, the interviewer felt it would be unsafe, or the respondent is not able to stand. RWWSTREF indicates whether the respondent did not participate in the waist measurement because they refused, with no reason given. RWWSTTRYU indicates whether the respondent did not participate in the waist measurement because they tried but were unable to complete the measurement. RWWSTEQUP indicates whether the respondent did not participate in the waist measurement because of problems with equipment/supplies or not having a suitable

space to perform the measurement. RwwSTOTHR indicates whether the respondent did not participate in the waist measurement because either they did not understand the instructions or because of another reason. RwwSTSFT, RwwSTREF, RwwSTTRYU, RwwSTEQUP, and RwwSTOTHR are coded as 0 if the specific reason was not given for the respondent not completing the waist measurement, and are coded as 1 if the specific reason was given. Don't know, refuse, and other missing responses to RwwSTSFT, RwwSTREF, RwwSTTRYU, RwwSTEQUP, and RwwSTOTHR are set to special missing .d, .r, and .m, respectively. Special missing .c is assigned if the respondent completed the waist measurement. Special missing .s is assigned if the physical measure questions were skipped because the respondent was not selected for a face-to-face interview, was not selected for an enhanced face-to-face interview, or was living in the nursing home. Responses are set to blank missing (.) when the respondent does not participate in the current wave.

SwwSTSFT, SwwSTREF, SwwSTTRYU, SwwSTEQUP, and SwwSTOTHR indicate the reasons for the respondent's current wave's spouse not taking part in the waist measurement, and their values are taken from the spouse's values to RwwSTSFT, RwwSTREF, RwwSTTRYU, RwwSTEQUP, and RwwSTOTHR. In addition to the special missing codes employed by RwwSTSFT, RwwSTREF, RwwSTTRYU, RwwSTEQUP, and RwwSTOTHR, SwwSTSFT, SwwSTREF, SwwSTTRYU, SwwSTEQUP, and SwwSTOTHR employ two additional special missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Physical measure tests began in Wave 7, but they were only given to a random subsample of approximately 3300 respondents. Of this subsample, smaller subsamples were given the height or weight measurements. Height and weight measurements were given to a larger sample of respondents starting in Wave 8. If the respondent was selected for some physical measures but not the height or weight measurements in Wave 7, then special missing .s is assigned.

Waist circumference was not measured until Wave 8.

The wording of and options used to create RwwHGTSFT changes slightly across waves. In Wave 8, the wording is "R had surgery, injury or other health condition that prevented R from completing the measurement". Starting in Wave 9, the wording is "R is not able to stand; other health reason". There is no comparable option in Wave 7.

The wording of and options used to create RwwHGTEQUP change across waves. In Wave 7, the available options include "no suitable space available" and "problem with equipment and/or consent form". In Wave 8, the wording for this option is changed to "problem with equipment or supplies". Starting in Wave 8, there is the added option of "R too tall, interviewer could not reach".

The options used to create RwwWGTSFT are different in Wave 7. Starting in Wave 8, there is an option of "R is not able to stand or balance on scale; other health reason", which is not available in Wave 7.

The wording of and options used to create RwwWGTEQUP change across waves. In Wave 7, the available options include "respondent was too heavy; did not attempt", "no suitable space available", "scale did not work", and "problem with equipment and/or consent form". In Wave 8, the wording for the option of equipment problems changes to "problem with equipment or supplies". Starting in Wave 9, the option for equipment problems changes again to "scale did not work; other problem with equipment or supplies". In Waves 8 through 11, there is no option for the respondent being too heavy, but starting in Wave 12 the options include "respondent was too heavy; did not attempt".

The options used to create RwwSTSFT changes slightly across waves. In Waves 8 through 11, the wording is "R is not able to stand; other health reason". Starting in Wave 12, the wording is "R is not able to stand".

Starting in Wave 12, there are additional screening questions asking about the respondent's understanding of the directions and feelings of safety in completing these measurements which determine whether the respondent participates in the height, weight, and waist measurements.

No physical measures were collected in Wave 15 as a result of the COVID-19 pandemic.

**HRS Variables Used:**

## Wave 7:

JI831 r height  
 JI832M1 measure height- not complete-1  
 JI832M2 measure height- not complete-2  
 JI832M3 measure height- not complete-3  
 JI838 able to measure weight  
 JI839M1 reason not complete weight measurement-1  
 JI839M2 reason not complete weight measurement-2  
 JI839M3 reason not complete weight measurement-3  
 JI839M4 reason not complete weight measurement-4

## Wave 8:

KI831 measure r height  
 KI832M1 height reason not complete-1  
 KI832M2 height reason not complete-2  
 KI832M3 height reason not complete-3  
 KI832M4 height reason not complete-4  
 KI832M5 height reason not complete-5  
 KI838 weight able to measure  
 KI839M1 weight reason not complete-1  
 KI839M2 weight reason not complete-2  
 KI839M3 weight reason not complete-3  
 KI839M4 weight reason not complete-4  
 KI839M5 weight reason not complete-5  
 KI904 waist complete  
 KI905M1 waist why not complete-1  
 KI905M2 waist why not complete-2  
 KI905M3 waist why not complete-3  
 KI905M4 waist why not complete-4

## Wave 9:

### How Constructed:

For the hearing test, a HearCheck device is placed over each of the respondent's ears. Prior to the start of the test, the interviewer is instructed to remove any obstructions from the respondent's ears, such as long hair, glasses, jewelry, and hearing aids. The device plays a series of tones and the respondent is asked to raise their finger each time they hear a sound.

RwHEAR\_L1 and RwHEAR\_R1 indicate the number of tones the respondent correctly heard for the first test at 1,000 Hz in the left and right ears, respectively. RwHEAR\_L2 and RwHEAR\_R2 indicate the number of tones the respondent correctly heard for the second test at 3,000 Hz in the left and right ears, respectively. For each tone the respondent correctly hears, one is added to the score, with a maximum of 6 points, creating a scale of 0-6 for these variables. RwHEAR\_L and RwHEAR\_R are summary scores for the hearing tests and indicate the sum of the two tests for the left and right ears, respectively. RwHEAR\_L and RwHEAR\_R range from 0-12. Special missing .r and .m are assigned if the respondent refused to complete the test or has an otherwise missing response, respectively. Special missing .x is assigned if the respondent tried to do the test but was unable to do it or received an error message. Special missing .n is assigned if the respondent did not complete the test due to a variety of reasons, including safety concerns or the respondent did not understand the instructions. RwHEAR\_L1, RwHEAR\_R1, RwHEAR\_L2, RwHEAR\_R2, RwHEAR\_L, and RwHEAR\_R are assigned special missing .s if the questions were skipped because the respondent was not selected for a face-to-face interview, was not selected for an enhanced face-to-face interview, or was living in the nursing home. These measures are assigned plain missing (.) if the respondent did not respond to the current wave.

SwHEAR\_L1, SwHEAR\_R1, SwHEAR\_L2, SwHEAR\_R2, SwHEAR\_L, and SwHEAR\_R indicate the first, second, and total hearing score for the left and right ears of the respondent's current wave's spouse, and their values are taken from the spouse's value to RwHEAR\_L1, RwHEAR\_R1, RwHEAR\_L2, RwHEAR\_R2, RwHEAR\_L, and RwHEAR\_R. In addition to the special missing codes employed by RwHEAR\_L1, RwHEAR\_R1, RwHEAR\_L2, RwHEAR\_R2, RwHEAR\_L, and RwHEAR\_R, SwHEAR\_L1, SwHEAR\_R1, SwHEAR\_L2, SwHEAR\_R2, SwHEAR\_L, and SwHEAR\_R employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwHEARCOMP indicates whether the respondent was willing and able to complete the hearing tests. RwHEARCOMP is coded as 1 if the respondent understood the directions for the test, the respondent felt it

would be safe to complete the test, and the respondent completed at least one of the hearing tests. RwHEARCOMP is coded as 0 if the respondent did not understand the instructions, expressed safety concerns, had a cochlear implant, had an ear infection in either ear, was wearing hearing aids and was not willing to remove them, or did not complete any of the hearing tests. Special missing .r and .m are assigned if the respondent refused to complete the test or has an otherwise missing response, respectively. RwHEARCOMP is assigned special missing .s if the questions were skipped because the respondent was not selected for a face-to-face interview, was not selected for an enhanced face-to-face interview, or was living in the nursing home. RwHEARCOMP is assigned plain missing (.) if the respondent did not respond to the current wave.

SwHEARCOMP indicates whether the respondent's current wave's spouse was willing and able to complete the hearing tests, and its values are taken from the spouse's value to RwHEARCOMP. In addition to the special missing codes employed by RwHEARCOMP, SwHEARCOMP employs two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwHEAR\_AID indicates whether the respondent was wearing a hearing aid in one or both ears when asked to participate in the hearing test. RwHEAR\_AID is coded as 0 if the respondent was not wearing any hearing aids when asked to participate, and is coded as 1 if the respondent was wearing a hearing aid when asked to participate. If the respondent agreed to participate in the test, they were instructed to remove the hearing aids for the test. Special missing .r and .m are assigned if the respondent refused to complete the test or has an otherwise missing response, respectively. RwHEAR\_AID is assigned special missing .s if the questions were skipped because the respondent was not selected for a face-to-face interview, was not selected for an enhanced face-to-face interview, or was living in the nursing home. RwHEAR\_AID is assigned plain missing (.) if the respondent did not respond to the current wave.

SwHEAR\_AID indicates whether the respondent's current wave's spouse was wearing any hearing aids, and its values are taken from the spouse's value to RwHEAR\_AID. In addition to the special missing codes employed by RwHEAR\_AID, SwHEAR\_AID employs two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwHEAR\_P indicates whether any problems occurred during the respondent's hearing test. RwHEAR\_P is coded as 0 if no problems occurred during the hearing test. RwHEAR\_P is coded as 1 if the interviewer indicates that any of the following problems occurred during the hearing test: background noise interfered with the hearing test, problem with equipment or supplies, had to restart the test, respondent removed obstructions (glasses, earrings, etc.), respondent removed hearing aid, respondent took action to reduce background noise (turned down television, asked household members for quiet, etc.), respondent raised their finger more than three times for a single test, or another problem occurred. Special missing .r and .m are assigned if the respondent refused to complete the test or has an otherwise missing response, respectively. RwHEAR\_P is assigned special missing .s if the questions were skipped because the respondent was not selected for a face-to-face interview, was not selected for an enhanced face-to-face interview, or was living in the nursing home. RwHEAR\_P is assigned plain missing (.) if the respondent did not respond to the current wave.

SwHEAR\_P indicates whether any problems occurred during the respondent's current wave's spouse's hearing test, and its values are taken from the spouse's values to RwHEAR\_P. In addition to the special missing codes employed by RwHEAR\_P, SwHEAR\_P employs two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

The hearing tests begin in Wave 13.

No physical measures were collected in Wave 15 as a result of the COVID-19 pandemic.

## HRS Variables Used:

Wave 13:

PI672 have cochlear implant  
PI673 have ear infection  
PI674 willing to remove aid for hearing test  
PI675 r felt safe to do hearing test  
PI678 hearing test 1 - left ear  
PI679 hearing test 2 - left ear  
PI680 hearing test 1 - right ear  
PI681 hearing test 2 - right ear  
PI682 completed at least one hearing test  
PI683M1 hearing test problems - 1  
PI683M2 hearing test problems - 2  
PI683M3 hearing test problems - 3  
PI683M4 hearing test problems - 4  
PI946 currently wearing hearing aid

## Wave 14:

QI672 have cochlear implant  
QI673 have ear infection  
QI674 willing to remove aid for hearing test  
QI675 r felt safe to do hearing test  
QI678 hearing test 1 - left ear  
QI679 hearing test 2 - left ear  
QI680 hearing test 1 - right ear  
QI681 hearing test 2 - right ear  
QI682 completed at least one hearing test  
QI683M1 hearing test problems - 1  
QI683M2 hearing test problems - 2  
QI683M3 hearing test problems - 3  
QI683M4 hearing test problems - 4  
QI946 currently wearing hearing aid

### How Constructed:

RwHEARSFT, RwHEARREF, RwHEARTRYU, RwHEAREQUP, and RwHEAROTHR indicate the reasons for the respondent not taking part in the hearing test as reported by the interviewer. The interviewer is asked to report all of the reasons the respondent did not complete the hearing test. RwHEARSFT indicates whether the respondent did not participate in the hearing test because they felt it would not be safe, or the interviewer felt it would be unsafe. RwHEARREF indicates whether the respondent did not participate in the hearing test because they refused, with no reason given, or they were not willing to remove glasses, earrings, headwear, etc. RwHEARTRYU indicates whether the respondent did not participate in the hearing test because they tried but were unable to complete the test. RwHEAREQUP indicates whether the respondent did not participate in the hearing test because of either problems with equipment/supplies, not having a suitable space, or background noise prevented the execution of the test. RwHEAROTHR indicates whether the respondent did not participate in the hearing test because either they did not understand the instructions, or because of another reason. RwHEARSFT, RwHEARREF, RwHEARTRYU, RwHEAREQUP, and RwHEAROTHR are coded as 0 if the specific reason was not given for the respondent not completing the hearing test, and are coded as 1 if the specific reason was given. Don't know, refuse, and other missing responses to RwHEARSFT, RwHEARREF, RwHEARTRYU, RwHEAREQUP, and RwHEAROTHR are set to special missing .d, .r, and .m, respectively. Special missing .c is assigned if the respondent completed at least one of the hearing tests. Special missing .s is assigned if the physical measure questions were skipped because the respondent was not selected for a face-to-face interview, was not selected for an enhanced face-to-face interview, or was living in the nursing home. Responses are set to blank missing (.) when the respondent does not participate in the current wave.

SwHEARSFT, SwHEARREF, SwHEARTRYU, SwHEAREQUP, and SwHEAROTHR indicate the reasons for the respondent's current wave's spouse not taking part in the hearing test, and their values are taken from the spouse's values to RwHEARSFT, RwHEARREF, RwHEARTRYU, RwHEAREQUP, and RwHEAROTHR. In addition to the special missing codes employed by RwHEARSFT, RwHEARREF, RwHEARTRYU, RwHEAREQUP, and RwHEAROTHR, SwHEARSFT, SwHEARREF, SwHEARTRYU, SwHEAREQUP, and SwHEAROTHR employ two additional special missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

### Cross Wave Differences in HRS

The hearing tests begin in Wave 13, therefore the reasons for the respondent not taking part in the hearing test as reported by the interviewer are also available starting in Wave 13.

No physical measures were collected in Wave 15 as a result of the COVID-19 pandemic.

### HRS Variables Used:

#### Wave 13:

PI682	completed at least one hearing test
PI685M1	why hearing test not complete - 1
PI685M2	why hearing test not complete - 2
PI685M3	why hearing test not complete - 3
PI685M4	why hearing test not complete - 4

#### Wave 14:

QI682	completed at least one hearing test
QI685M1	why hearing test not complete - 1
QI685M2	why hearing test not complete - 2

QI685M3            why hearing test not complete - 3  
QI685M4            why hearing test not complete - 4

### How Constructed:

RwMEALHLP, RwSHOPHLP, RwPHONEHLP, RwMEDHLP, and RwMONEYHLP indicate whether anyone helps the respondent with each IADL. RwMEALHLP indicates whether respondents who have difficulty with meal preparation have anyone help them prepare hot meals. RwSHOPHLP indicates whether respondents who have difficulty with grocery shopping have anyone help them shop for groceries. RwPHONEHLP indicates whether respondents who have difficulty with making phone calls have anyone help them make phone calls. RwMEDHLP indicates

whether respondents who have difficulty with taking medications have anyone help them with taking medications. RWMONEYHLP indicates whether respondents who have difficulty managing money have anyone help them manage their money. These variables are coded as 1 if someone helps the respondent with the IADL, while a 0 indicates that nobody helps the respondent with the IADL.

In Wave 3 and forward, respondents are asked whether they have difficulty with a particular IADL due to health or memory problems. If the respondent reported difficulty with a particular IADL because of a health or memory problem, then they are asked whether anyone helps with that same activity. Respondents who do not have difficulty with a particular IADL are assigned special missing code .x. For RWMEDHLP, respondents who do not currently take medication and expect to have no problem with their medication if taking it becomes necessary in the future are also assigned special missing code .x. Respondents who reported that they "don't do" the activity when asked if they have difficulty with it, are assigned special missing .j. Starting in Wave 4, respondents who live in a nursing home or other health care facility are not asked RWMEDHLP, RWSHOPHLP, and RWMEDHLP and are assigned special missing .n. In Wave 7, an erroneous program allowed Spanish respondents to answer "can't do" or "don't do" when answering questions used in RWMEDHLP, RWSHOPHLP, RWPHONEHLP, RWMEDHLP, and RWMONEYHLP, and these responses are coded as .t and .j, respectively. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, and .m, respectively. RWMEDHLP, RWSHOPHLP, RWPHONEHLP, RWMEDHLP, and RWMONEYHLP are set to plain missing (.) for respondents who did not participate in the current wave.

SWMEALHLP, SWSHOPHLP, SWPHONEHLP, SWMEDHLP, and SWMONEYHLP indicate whether anyone helps the respondent's current wave's spouse with the associated IADL. These values are taken from RWMEDHLP, RWSHOPHLP, RWPHONEHLP, RWMEDHLP, and RWMONEYHLP. In addition to the special missing codes employed by RWMEDHLP, RWSHOPHLP, RWPHONEHLP, RWMEDHLP, and RWMONEYHLP, SWMEALHLP, SWSHOPHLP, SWPHONEHLP, SWMEDHLP, and SWMONEYHLP employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Whether anyone helps with specific IADL activities is asked beginning in Wave 3.

In Waves 3 through 5, respondents are able to say that 2 people helped them manage their money, so RWMONEYHLP accounts for both of these questions.

Starting in Wave 4, respondents who live in a nursing home are not asked whether someone helps them with preparing hot meals, shopping for groceries, or taking medication even if they report difficulty with those activities.

In Wave 7, an erroneous program allowed Spanish respondents to answer 'Can't do' or 'Don't do' when answering questions for variables RWMEDHLP, RWSHOPHLP, and RWPHONEHLP, these responses are coded as special missing .t and .j, respectively.

**How Constructed:**

RwDRIVE indicates whether the respondent is able to drive. RwDRIVE is coded as 1 if the respondent is able to drive, while a 0 indicates that the respondent is not able to drive. If the respondent reports never driving, special missing .n is assigned. In the AHEAD cohorts in Waves 2 and 3, respondents of all ages were asked about their driving ability. In the Wave 3 HRS cohort, respondents under the age of 68 were not asked this question and so are assigned special missing code .a in Wave 3. In Wave 4 and forward, respondents under the age of 65 were not asked this question and so are assigned special missing code .a. Starting in Wave 13, this question is skipped in odd-numbered waves for previously interviewed respondents, in which case RwDRIVE is assigned special missing .s. Respondents in the Wave 2 HRS cohort are not asked this question, and so are assigned special missing .q in Wave 2. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, and .m, respectively. RwDRIVE is set to plain missing (.) for respondents who did not participate in the current wave.

SwDRIVE indicates whether the respondent's current wave's spouse is able to drive, and is taken from RwDRIVE. In addition to the special missing codes employed by RwDRIVE, SwDRIVE employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

**Cross Wave Differences in HRS**

The Wave 2 HRS respondents are not asked about their ability to drive at all.

Whether a respondent is able to drive is asked regardless of age in the AHEAD cohorts in Waves 2 and 3. The Wave 3 HRS respondents aged 68 and older are asked if they are able to drive. Starting in Wave 4, respondents age 65 and older are asked whether they are able to drive.

Starting in Wave 13, this question is skipped in odd-numbered waves for previously interviewed respondents.

## How Constructed:

RwHANDRT indicates the respondent's self-rated hand strength. RwHANDRT is coded as follows: 1. very strong, 2. somewhat strong, 3. somewhat weak, and 4. very weak. If the respondent did not participate in the enhanced face-to-face interview, then special missing code .s is assigned. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, and .m, respectively. RwHANDRT is set to plain missing (.) for respondents who did not participate in the current wave.

SwHANDRT indicates the respondent's current wave's spouse's self-rated hand strength, and is taken from RwHANDRT. In addition to the special missing codes employed by RwHANDRT, SwHANDRT employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwsBREATH indicates how often the respondent becomes short of breath while awake. RwsBREATH is coded as follows: 1. often, 2. sometimes, 3. rarely, and 4. never. If the respondent did not participate in the enhanced face-to-face interview, then special missing code .s is assigned. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, and .m, respectively. RwsBREATH is set to plain missing (.) for respondents who did not participate in the current wave.

SwsBREATH indicates how often the respondent's current wave's spouse becomes short of breath while awake, and is taken from RwsBREATH. In addition to the special missing codes employed by RwsBREATH, SwsBREATH employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwBALANC indicates how often the respondent has difficulty with balance. RwBALANC is coded as follows: 1. often, 2. sometimes, 3. rarely, and 4. never. If the respondent did not participate in the enhanced face-to-face interview, then special missing code .s is assigned. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, and .m, respectively. RwBALANC is set to plain missing (.) for respondents who did not participate in the current wave.

SwBALANC indicates how often the respondent's current wave's spouse has difficulty with balance, and is taken from RwBALANC. In addition to the special missing codes employed by RwBALANC, SwBALANC employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

### Cross Wave Differences in HRS

Respondents who participate in the enhanced face-to-face interview are asked to rate their own hand strength, and how often they become short of breath or have difficulty with balance starting in Wave 8.

#### HRS Variables Used:

Wave 8:

KG208	rate hand strength
KG209	short of breath
KG210	difficulty with balance
KX090_R	prefered mode of iwer -1

Wave 9:

LG208	rate hand strength
LG209	short of breath
LG210	difficulty with balance
LX090_R	prefered mode of iwer -1

Wave 10:

MG208	rate hand strength
MG209	short of breath
MG210	difficulty with balance
MX090_R	prefered mode of iw -1

Wave 11:

NG208	rate hand strength
NG209	short of breath
NG210	difficulty with balance
NX090_R	prefered mode of iw -1

Wave 12:

OG208	rate hand strength
OG209	short of breath
OG210	difficulty with balance
OX090_R	prefered mode of iw -1

Wave 13:

PG208	rate hand strength
PG209	short of breath
PG210	difficulty with balance
PX090_R	prefered mode of iw -1

Wave 14:

QG208	rate hand strength
QG209	short of breath
QG210	difficulty with balance
QX090_R	prefered mode of iw -1

Wave 15:

RG208	rate hand strength
-------	--------------------

RG209 short of breath  
RG210 difficulty with balance  
RX090\_R preferred mode of iw -1

<b>Impairments</b>
--------------------

## How Constructed:

RwLIMHWRK indicates whether the respondent has any impairment or health problem that limits the kind or amount of work that can be done around the house. The respondent is first asked whether an impairment or problem limits their ability to work, and if not, then asked whether an impairment or problem limits their ability to do housework. RwLIMHWRK is coded as 1 if the respondent does have an impairment or health problem that limits the kind or amount of work that can be done around the house or that limits the kind or amount of paid work they can do, while a 0 indicates the respondent does not have such an impairment. If the respondent voluntarily reports being too old to work, then special missing code .o is assigned. Respondents who participated in the AHEAD cohorts in Waves 2 and 3 were not asked this question, and are assigned special missing code .q. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, and .m, respectively. RwLIMHWRK is set to plain missing (.) for respondents who did not participate in the current wave.

SwLIMHWRK indicates whether the respondent's current wave's spouse has a health problem that limits their ability to do housework, and is taken from RwLIMHWRK. In addition to the special missing codes employed by RwLIMHWRK, SwLIMHWRK employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwLIMIMPAR indicates whether the respondent is limited in any way in activities because of an impairment or problem. The respondent is first asked whether an impairment or problem limits their ability to work, and if not, then asked whether an impairment or problem limits their ability to do housework, and if not, then asked whether they are limited in any way in activities because of an impairment or problem. RwLIMIMPAR is coded as 1 if the respondent is limited in work, housework, or activities because of an impairment or problem, while a 0 indicates the respondent is not limited in any activities. Respondents who voluntarily reported being too old to work when asked whether an impairment or health problem limits the kind or amount of paid work, were not asked this question and were assigned special missing code .o. Respondents who participated in the AHEAD cohorts in Waves 2 and 3 were not asked this question, and are

assigned special missing code .q. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, and .m, respectively. RwlLIMIMPAR is set to plain missing (.) for respondents who did not participate in the current wave.

SwLIMIMPAR indicates whether the respondent's current wave's spouse is limited in activities due to a health problem, and is taken from RwlLIMIMPAR. In addition to the special missing codes employed by RwlLIMIMPAR, SwLIMIMPAR employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

These limitation questions are not asked in Wave 1. Limitation questions are not asked to the AHEAD cohorts in Waves 2 and 3, but are asked to the Waves 2 and 3 HRS cohorts.

In Waves 2 through 6, respondents are not given the option to answer 'Too old to work' for questions pertaining to RwlLIMHWRK and RwlLIMIMPAR.

Starting in Wave 4, new respondents and reinterview respondents are asked these questions separately.

In Wave 7, respondents who reported a work disability in a prior wave were erroneously not asked whether their health affects paid work and were asked whether any health impairment limited their housework or any other activities, making the number of respondents to answer these questions much higher than any other waves.

## HRS Variables Used:

Wave 2 AHEAD:	
BN_INHH	ahd w1: # r's responding in hhold
Wave 2 HRS:	
W5200	j1.health problem that l
W5207	j1d.limit housework
W5208	j1e.limit in anyway
Wave 3 AHEAD:	
DN_INHH	dn_inhh: # r's responding in hhold
Wave 3 HRS:	
E3507	gd1. health prob
E3511	gd1d.limit housework
E3512	gd1e.limit in anyway
Wave 4:	
F4017	gd1. health prob
F4021	gd1d.limit housework
F4201	gj1.health prob
F4205	gj1d.limit housework
Wave 5:

### How Constructed:

RwFTRHLP indicates whether, supposing in the future the respondent needed help with basic personal care activities like eating or dressing (i.e. ADL), they have relatives or friends besides a spouse/partner, who would be willing and able to help them over a long period with said needs. RwFTRHLP is coded as 1 if the respondent would have someone willing and able to help them in the future if need be, while a 0 indicates they do not have anyone. Special missing code .h is employed if the respondent currently receives help with ADLs or IADLs and was not asked this question. Starting in Wave 6, special missing code .n is employed if the respondent resides in a nursing home or health care facility, and is not asked this question. The HRS cohort in Wave 2 are not asked this question, and so are assigned special missing .q in Wave 2. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, and .m, respectively. RwFTRHLP is set to plain missing (.) for respondents who did not participate in the current wave.

SwFTRHLP indicates whether the respondent's current wave's spouse has someone who could help with future ADL needs, and is taken from RwFTRHLP. In addition to the special missing codes employed by RwFTRHLP, SwFTRHLP employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwFTRKIDS indicates whether a child, child-in-law, or grandchild of the respondent would be willing and able to help the respondent with basic personal care activities if needed in the future. RwFTRKIDS is coded as 0 if the respondent did not report a child, child-in-law, or grandchild could help or that nobody could help, and is coded as 1 if a child, child-in-law, or grandchild could help. This question is asked if the respondent answered they do have someone who would be willing and able to help if needed in the future with basic personal care activities. Special missing code .h is employed if the respondent currently receives help with ADLs or IADLs and was not asked these questions. Starting in Wave 6, special missing code .n is employed if the respondent resides in a nursing home or health care facility, and is not asked this question. The HRS cohort in Wave 2 are not asked this question, and so are assigned special missing .q in Wave 2. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, and .m, respectively. RwFTRKIDS is set to plain missing (.) for respondents who did not participate in the current wave.

SwFTRKIDS indicates whether a child, child-in-law, or grandchild would help the respondent's current wave's spouse with future ADL needs, and is taken from RwFTRKIDS. In addition to the special missing

codes employed by RwfTRKIDS, SwfTRKIDS employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwFTROTHR indicates whether a relative of the respondent or someone else, not child or grandchild, would be willing and able to help the respondent with basic personal care activities if needed in the future. RwFTROTHR is coded as 0 if the respondent did not report a relative or someone else could help or that nobody could help, and is coded as 1 if a relative or someone else could help. This question is asked if the respondent answered they do have someone who would be willing and able to help if needed in the future with basic personal care activities. Special missing code .h is employed if the respondent currently receives help with ADLs or IADLs and was not asked these questions. Starting in Wave 6, special missing code .n is employed if the respondent resides in a nursing home or health care facility, and is not asked this question. The HRS cohort in Wave 2 are not asked this question, and so are assigned special missing .q in Wave 2. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, and .m, respectively. RwFTROTHR is set to plain missing (.) for respondents who did not participate in the current wave.

SwFTROTHR indicates whether a relative or someone else would help the respondent's current wave's spouse with future ADL needs, and is taken from RwFTROTHR. In addition to the special missing codes employed by RwFTROTHR, SwFTROTHR employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

HRS Wave 2 respondents are not asked these questions.

Questions about whether someone would help the respondent if they had future need for help with personal care activities are asked beginning in the AHEAD cohort in Wave 2.

For the AHEAD cohort in Wave 2 and Waves 3 through 5, respondents are asked about future ADL assistance whether or not the respondent lives in a nursing home. Starting in Wave 6, respondents living in a nursing home are not asked these questions.

### How Constructed:

HwGPCARE indicates whether the respondent and/or their spouse spent 100 or more hours providing personal care or help with chores to their parents. Family respondents are asked two separate questions regarding care given to parents, the first is whether the respondent and their spouse have spent 100 or more hours helping their parents with basic personal needs like dressing, eating, and bathing, the second is whether the respondent and their spouse have spent 100 or more hours helping with other things such as household chores, errands, transportation, etc. HwGAPCARE indicates whether the respondent and/or their spouse spent 100 or more hours providing personal care to their parents. HwGPCHORE indicates whether the respondent and/or their spouse spent 100 or more hours helping their parents with household chores or other errands.

In Wave 1, the family respondent is only asked about personal care given to parents, separately for the respondent's parent's and their spouse's parents, for a total of 100 or more hours in the past 12 months, as a result HwGPCARE and HwGPCHORE are not available in Wave 1. In the AHEAD cohort in Wave 2, the family

respondent is asked only about personal care given to parents, separately for their mother and their father, for a total of 100 hours in the past 12 months. In the HRS cohort in Wave 2, the family respondent is asked about personal care given to parents and help with chores given to parents, separately for the respondent's parents and their spouse's parents, for a total of 50 or more hours in the past 12 months. In the HRS cohort in Wave 3, the family respondent is asked about personal care given to parents and help with chores given to parents, separately for the respondent's parents and for their spouse's parents, for a total of 100 hours in the past 2 years or since the previous interview. Starting in Wave 4, the family respondent is asked about personal care given to parents and help with chores given to parents, combining the respondent's and their spouse's parents, for a total of 100 or more hours in the past 2 years or since the previous interview.

HwGPCARE is assigned a 0 if the family respondent reported not spending 100 or more hours providing personal care or help with chores to parents, and is assigned a 1 if the family respondent reported spending 100 or more hours providing personal care or help with chores to parents. HwGAPCARE is assigned a 0 if the family respondent reported not spending 100 or more hours providing personal care, and is assigned a 1 if the family respondent reported spending 100 or more hours providing personal care to parents. HwGPCHORE is assigned a 0 if the family respondent reported not spending 100 or more hours providing help with chores to parents, and is assigned a 1 if the family respondent reported spending 100 or more hours providing help with chores to parents. In Wave 1 and the AHEAD and HRS cohorts in Wave 2, HwGPCARE, HwGAPCARE, and HwGPCHORE are assigned a 0 if the respondent and their spouse did not provide the amount of care to parents asked about in the particular wave (100 hours in the past twelve months for Wave 1 and the AHEAD cohort in Wave 2, and 50 hours in the past twelve months for the HRS cohort in Wave 2), and is assigned a 1 if the respondent and their spouse did provide the amount of care to parents asked about in the particular wave through personal care and/or help with chores. HwGPCARE, HwGAPCARE, and HwGPCHORE are assigned special missing .h if the respondent has no living parents. In Wave 1, HwGAPCARE is assigned special missing .s if these questions were skipped because the respondent was not designated as a respondent for that section. In the HRS cohort in Wave 2, HwGPCARE, HwGAPCARE, and HwGPCHORE are assigned special missing .i if the questions were skipped because there was no information on the parents. In Waves 2 through 4, HwGPCARE, HwGAPCARE, and HwGPCHORE are assigned special missing .f if these questions were skipped because there was no family respondent. Questions about helping parents with chores are not asked in the AHEAD cohort in Wave 2, so HwGPCHORE is assigned special missing .q in this wave. These questions are not asked in the AHEAD cohort in Wave 3, and so HwGPCARE, HwGAPCARE, and HwGPCHORE are assigned special missing .q in this wave. Don't know, refused, or other missing responses of HwGPCARE, HwGAPCARE, and HwGPCHORE are assigned special missing codes .d, .r, .m, respectively. HwGPCARE, HwGAPCARE, and HwGPCHORE are set to plain missing (.) for respondents who did not respond to the current wave.

## Cross Wave Differences in HRS

Questions about caring for parents are not asked in the AHEAD cohort in Wave 3.

In Wave 1, the family respondent is only asked about personal care given to parents, separately for the respondent's parent's and their spouse's parents, for a total of 100 or more hours in the past 12 months. In the AHEAD cohort in Wave 2, the family respondent is asked only about personal care given to parents, separately for their mother and their father, for a total of 100 hours in the past 12 months. In the HRS cohort in Wave 2, the family respondent is asked about personal care given to parents and help with chores given to parents, separately for the respondent's parents and their spouse's parents, for a total of 50 or more hours in the past 12 months. In the HRS cohort in Wave 3, the family respondent is asked about personal care given to parents and help with chores given to parents, separately for the respondent's parents and for their spouse's parents, for a total of 100 hours in the past 2 years or since the previous interview. Starting in Wave 4, the family respondent is asked about personal care given to parents and help with chores given to parents, combining the respondent's and their spouse's parents, for a total of 100 or more hours in the past 2 years or since the previous interview.

Only in Wave 1, questions about caring for grandchildren or providing personal care to parents were skipped if the respondent was not designated as a respondent for that section. Only in the HRS cohort in Wave 2, questions about providing personal care or help with chores to parents were skipped if there was no information on the parents. In Waves 2 through 4, these questions were skipped if there was no family respondent.

## How Constructed:

HwGKSIT indicates whether the respondent and/or their spouse spent 100 or more hours caring for their grandchildren or great-grandchildren. In Waves 1 and 2, the time period is the past 12 months and the question is asked only about grandchildren, and starting in the AHEAD and HRS cohorts in Wave 3, the time period is since the previous interview or in the last 2 years and the question is asked about grandchildren or great-grandchildren. In Wave 1, the family respondent is asked whether the respondent and their spouse spent 100 or more hours in total taking care of grandchildren in the past 12 months. In the HRS cohort in Wave 2, the family respondent is asked whether the respondent and their spouse provided 50 or more hours of care for grandchildren, and if so, the amount of time the respondent and their spouse spent separately caring for grandchildren. If the respondent doesn't know the exact hours or refuses to provide it, then they are asked whether the total for each person amounted to 100 hours or more. In the AHEAD cohort in Wave 3, the family respondent is asked about providing care for grandchildren or great-grandchildren separately for the respondent and their spouse. Starting in the HRS cohort in Wave 3, the family respondent is directly asked whether they or their spouse/partner spent 100 or more hours in total taking care of grandchildren or great-grandchildren since the previous interview or in the last two years.

HwGKSIT is assigned a 0 if the family respondent reported not spending 100 or more hours caring for grandchildren or great-grandchildren, and is assigned a 1 if the family respondent reported spending 100 or more hours caring for grandchildren or great-grandchildren. In the HRS cohort in Wave 2, HwGKSIT is assigned a 0 if the respondent and spouse didn't spend 50 or more hours caring for grandchildren, if the total reported time spent amounted to less than 100 hours, or if the estimate for either person amounted to less than 100 hours, and HwGKSIT is assigned a 1 if the respondent and spouse spent a reported total of 100 or more hours caring for grandchildren, or if the estimate for either person amounted to 100 hours or more. In the AHEAD cohort in Wave 3, HwGKSIT is assigned a 0 if neither the respondent nor spouse spent 100 or more hours caring for grandchildren, and HwGKSIT is assigned a 1 if either the respondent or spouse spent 100 or more hours caring for grandchildren. HwGKSIT is assigned special missing .g if the family respondent is not asked this question because they report having no grandchildren or are assumed to have no grandchildren. In Wave 1, HwGKSIT is assigned special missing .s if the respondent was not designated as a respondent for that section and so the question was not asked. In Waves 1, 6, and 7, HwGKSIT is assigned special missing .l if all of the respondent's children lived with the respondent and the question was not asked. In the HRS cohort in Wave 2, HwGKSIT is assigned special missing .o if the time reported caring for grandchildren was reported in an amount other than hours. In Wave 14, HwGKSIT is assigned special missing .f if there was no family respondent and special missing .c if the respondent reports not being in contact with any children, and so this question was not asked. This question is not asked to the AHEAD cohort in Wave 2, in which case HwGKSIT is assigned special missing .q in Wave 2. Don't know, refused, or other missing responses of HwGKSIT are assigned special missing codes .d, .r, .m, respectively. HwGKSIT is set to plain missing (.) for respondents who did not respond to the current wave.

Please note that there is a variable in the RAND Family Longitudinal Respondent-Level file, HwKDCAREKN, which indicates the number of children the respondent has who use the respondent and their spouse for child care for grandchildren or great-grandchildren. We have presented the direct report of whether the respondent cared for grandchildren or great-grandchildren to be more consistent with how this information is collected in other HRS family surveys and harmonized in their respective datasets.

Due to missing information in the current version of the raw variables, we will not provide H15GKSIT until the final version of the HRS data for Wave 15 becomes available.

## Cross Wave Differences in HRS

Questions about caring for grandchildren are not asked in the AHEAD cohort in Wave 2.

In Waves 1 and 2, the question is asked about caring for grandchildren. Starting with the AHEAD and HRS cohorts in Wave 3, the question is asked about caring for grandchildren or great-grandchildren.

In Wave 1, the family respondent is asked whether the respondent and their spouse provided care for grandchildren amounting to a total of 100 hours or more in the last 12 months. In Wave 2, the family respondent is asked whether the respondent and their spouse provided care for grandchildren amount to a total of 50 hours or more in the last 12 months. If so, the family respondent is asked about how much time the respondent and spouse each spent taking care of grandchildren separately, and if the answer is refused or don't know, then is asked whether the total amounted to 100 hours or more. In the AHEAD cohort in Wave 3, the family respondent is asked whether the respondent and their spouse provided care for grandchildren to a total of 100 hours or more in the since the previous interview (approximately 2 years) separately for the family respondent and their spouse. Starting in the HRS cohort in Wave 3, the family respondent is asked whether the respondent and their spouse provided care for grandchildren amounting to a total of 100 hours or more since the previous interview (approximately 2 years).

Only in Wave 1, questions about caring for grandchildren or providing personal care to parents were skipped if the respondent was not designated as a respondent for that section. In Waves 1, 6, and 7, questions about caring for grandchildren are skipped if all of the respondent's children lived with the respondent. Only in Wave 2 can the family respondent report caring for grandchildren in an amount other than hours.

In Wave 14 and 15, questions related to grandchildren are not asked if there is no family respondent for the household or if the respondent is not in contact with any children. While this appears to be the same skip pattern present in earlier waves, there is a higher frequency of these occurrences in Wave 14 necessitating the use of special missing values.

### How Constructed:

RwGCARESCK indicates whether the respondent reported caring for a sick or disabled adult. RwGCARESCK is coded as 1 if the respondent reports caring for a sick or disabled adult at least once a month. RwGCARESCK is coded as 0 if the respondent reports not caring for a sick or disabled adult at all in the last month or if they never care for a sick or disabled adult starting in Wave 10. Special missing code .1 is employed if the respondent did not complete the leave behind questionnaire or was not eligible for the leave behind questionnaire in this wave. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, and .m, respectively. RwGCARESCK is set to plain missing (.) for respondents who did not participate in the current wave.

RwGCARESCDK\_H indicates how often the respondent reported caring for a sick or disabled adult. RwGCARESCDK\_H is coded as follows: 1. daily, 2. several times a week, 3. once a week, 4. several times a month, 5. at least once a month, and 6. not in the last month/never. In Wave 9, the least frequent response available is "not in the last month". Starting in Wave 10, an additional response of "never/not relevant" is available, and these responses are assigned a value of 6. Special missing code .1 is employed if the respondent did not complete the leave behind questionnaire or was not eligible for the leave behind questionnaire in this wave. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, and .m, respectively. RwGCARESCDK\_H is set to plain missing (.) for respondents who did not participate in the current wave.

SwGCARESCK and SwGCARESCDK\_H indicate whether and how often the respondent's current wave's spouse cares for a sick or disabled adult, and are taken from RwGCARESCK and RwGCARESCDK\_H. In addition to the special missing codes employed by RwGCARESCK and RwGCARESCDK\_H, SwGCARESCK and SwGCARESCDK\_H employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

### Cross Wave Differences in HRS

Respondents are asked how often they care for a sick or disabled adult in the leave behind questionnaire starting in Wave 9.

In Wave 9, this question has 6 answer categories: 1.daily, 2.several times a week, 3.once a week, 4.several times a month, 5.at least once a month, and 6.not in the last month. Starting in Wave 10, a seventh answer category is added: 7.never/not relevant.

### How Constructed:

RwRACANY indicates whether the respondent receives any care for difficulties with activities of daily living (ADL). If the respondent reports having difficulty with an ADL, then they are asked whether someone helps them with that activity. The activities of daily living include dressing, walking across a room, bathing, eating, getting in and out of bed, and using the toilet. RwRACANY is assigned a value of 0 if the respondent has difficulty with at least one ADL but receives no help with the activity. RwRACANY is assigned a value of 1 if the respondent has difficulty with at least one ADL and someone helps with at least one of the activities. RwRACANY is assigned special missing .x if the respondent has no difficulty with any ADLs. These questions are not asked to HRS Wave 2 respondents, and so are assigned special missing .q in Wave 2. Don't know, refused, and other missing responses are assigned special missing .d, .r, and .m, respectively. RwRACANY is assigned a blank missing (.) if the respondent did not participate in the current wave. The information used to derive this variable is taken from the respondent-level HRS helper files.

SwRACANY indicates whether the respondent's current wave's spouse receives any care for difficulties with ADLs, and its values are taken from RwRACANY. In addition to the special missing codes employed by

RwRACANY, SwRACANY employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Questions about receiving help for difficulties with ADLs are not asked at all in Wave 1 and for the HRS cohort in Wave 2.

Questions about help with ADL activities are asked differently in the AHEAD cohort in Wave 2 than in other waves. In this cohort, if the respondent reports receiving help with an ADL, then they are asked how frequently they receive help with that activity, and then asked whether they have difficulty with the activity. In Waves 3 and onward, the respondent is first asked whether they have difficulty with an ADL, and if so, they are asked whether someone helps them with that activity. The coding for the AHEAD cohort in Wave 2 has been adjusted to make the measures as comparable as possible to other waves.

### How Constructed:

RwRACAANY indicates whether the respondent receives any informal care for difficulties with activities of daily living (ADL). The activities of daily living include dressing, walking across a room, bathing, eating, getting in and out of bed, and using the toilet. In the AHEAD cohort in Wave 2, the respondent is first asked whether anyone helps them with each activity, then whether they have difficulty with it, and then who helps if they report receiving help with that activity. In Waves 3 and onward, if the respondent

reports having difficulty with an ADL, then they are asked whether someone helps them with that activity. If someone helps with the activity, they are asked for the relationships of up to 7 people who help them with ADLs. The information used to derive this variable is taken from the respondent-level and helper-level HRS helper files.

For the AHEAD cohort in Wave 2, the following relationships are considered to provide informal care: spouse, child, spouse of child, grandchild, spouse of grandchild, other relative, and other individual. For the AHEAD cohort in Wave 3 and the HRS cohorts in Waves 3 through 5, the following relationships are considered to provide informal care: spouse, child, child-in-law, unlisted child or child-in-law, step/partner child, grandchild, sibling, sibling of spouse, parent or parent-in-law, other relative, and other individual. In Waves 6 and onward, the following relationships are considered to provide informal care: spouse/partner, son, stepson, spouse/partner of daughter, daughter, stepdaughter, spouse/partner of son, grandchild, father, father of spouse/partner, mother, mother of spouse/partner, parents, brother, brother of spouse/partner, sister, sister of spouse/partner, other relative, other individual, former spouse, unlisted child or child-in-law, former step-child, former child-in-law, relationship unknown, and spouse/partner of grandchild.

RwRACAANY is assigned a value of 0 if the respondent has difficulty with at least one ADL but receives no help with the activity from an informal caregiver or does not receive any help at all. RwRACAANY is assigned a value of 1 if the respondent has difficulty with at least one ADL and an informal caregiver helps with at least one of the activities. RwRACAANY is assigned special missing .x if the respondent has no difficulty with any ADLs. Respondents in the AHEAD cohort in Wave 2 are not asked who helps them with ADLs if they report receiving help with the ADL some of the time or occasionally (as opposed to most/all of the time), in which case RwRACAANY is assigned special missing .f. These questions are not asked for the HRS cohort in Wave 2, so RwRACAANY is assigned special missing .q in this wave. Don't know, refused, and other missing responses are assigned special missing .d, .r, and .m, respectively. RwRACAANY is assigned a blank missing (.) if the respondent did not participate in the current wave.

SwRACAANY indicates whether the respondent's current wave's spouse receives any informal care for difficulties with ADLs, and its values are taken from RwRACAANY. In addition to the special missing codes employed by RwRACAANY, SwRACAANY employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

These questions are not asked at all in Wave 1 and for the HRS cohort in Wave 2.

In the AHEAD cohort in Wave 2, if the respondent reports receiving help with an ADL, then they are asked how frequently they receive help with that activity. If the respondent reports receiving help most/all of the time, then they are asked who helps them with that activity. They are not asked who helps them if they report receiving help some of the time or occasionally.

In Waves 3 and onward, if the respondent reports having difficulty with an ADL, then they are asked whether someone helps them with that activity. If someone helps with the activity, they are asked for the relationships of up to 7 people who help them with ADLs.

The options for type of relationship change slightly between the AHEAD cohort in Wave 2, Waves 3 through 5, and Waves 6 and onward, but these categories have been combined to keep the definitions as similar as possible between waves for RwRACAANY.
