## How Constructed:

The following variables indicate whether the respondent's spouse helps the respondent with any ADL needs. The activities of daily living include dressing, walking across a room, bathing, eating, getting in and out of bed, and using the toilet. In the AHEAD cohort in Wave 2, if the respondent reports receiving help with an ADL activity, then they are asked whether they have difficulty with it and who helps them with that activity. In Waves 3 and onward, if the respondent reports having difficulty with an ADL, then they are asked whether someone helps them with that activity. If someone helps with the activity, they are asked for the relationships of up to 7 people who help them with ADLs. The respondent is asked whether each reported helper is paid, unless that helper is the respondent's spouse or an employee of an institution. The information used to derive these variables is taken from the respondent-level and helper-level HRS helper files.

The following variables are coded as special missing .x if the respondent reports no difficulty with any ADL, and are coded as special missing .h if the respondent reports difficulty with an ADL but does not receive any help. For the AHEAD cohort in Wave 2, these variables are assigned special missing .f if the respondent reports receiving help from someone for difficulties with ADL activities "some of the time" or "occasionally", and not "most (all) of the time". Don't know, refused, or otherwise missing responses are assigned special missing values .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not participate in the current wave.

RwRASCARE, RwRASCAREN, RwRASCAREDPM, RwRASCAREDPMM, RwRASCAREHR, and RwRASCAREHRM include help from the current spouse/partner of the respondent in Waves 2 through 5, and the current or former spouse/partner of the respondent in Wave 6 and onward.

RwRASCARE indicates whether the respondent's spouse or former spouse helps the respondent with any ADL needs. RwRASCAREN indicates the number of the respondent's spouses or former spouses who help the respondent with ADL needs. RwRASCARE is coded as 0 if the respondent receives no assistance from their spouse, and coded as 1 if the respondent does receive help from their spouse. In Wave 2, RwRASCARE and RwRASCAREN are assigned special missing .q if the respondent participated in the HRS cohort in Wave 2. RwRASCARE is not available in Wave 1 and RwRASCAREN is not available in Waves 1, 3, and 4.

RwRASCAREDPM indicates the number of total days per month the respondent's spouse or former spouse helps the respondent with ADL needs. This variable comprises converted responses reported in terms of 'Days in last month', 'Days per week', and 'Everyday'. Respondents were allowed to report the amount of time each helper assists in one of the three mentioned frequencies. RwRASCAREDPM is the sum of days per month for all spouse or former spouse helpers, and so values can be over 31 days. RwRASCAREDPM is calculated as long as there is one non-missing value. RwRASCAREDPMM indicates the number of spouses or former spouses who helped the respondent for whom no value of days was reported and was not accounted for in RwRASCAREDPM. RwRASCAREDPMM is assigned special missing .m if the respondent was not helped by any spouse or former spouse or prior information was missing. RwRASCAREDPM and RwRASCAREDPMM are not available in Waves 1 through 4.

RwRASCAREHR indicates the number of total hours per day the respondent's spouse or former spouse helps the respondent with any ADL needs. Respondents are asked, on days their spouse helps with a particular ADL need, how many hours per day their spouse helps. If the respondent reports less than an hour, then a 1 is recorded. RwRASCAREHR is the sum of hours per day for all spouse or former spouse helpers, and so values can be over 24 hours. RwRASCAREHR is calculated as long as there is one non-missing value. RwRASCAREHRM indicates the number of spouses or former spouses who helped the respondent for whom no value of hours was reported and was not accounted for in RwRASCAREHR. RwRASCAREHRM is assigned special missing .m if the respondent was not helped by any spouse or former spouses or prior information was missing. If the respondent participated in the HRS cohort in Wave 2, then RwRASCAREHR and RwRASCAREHRM are assigned special missing .q in Wave 2. RwRASCAREHR and RwRASCAREHRM are not available in Waves 1, 3, and 4.

SwRASCARE, SwRASCAREN, SwRASCAREDPM, and SwRASCAREHR indicate whether, the number, and the frequency with which the respondent's current wave's spouse receives help from the respondent or their former spouse, and their values are taken from RwRASCARE, RwRASCAREN, RwRASCAREDPM, and RwRASCAREHR. SwRASCAREDPMM and SwRASCAREHRM indicate whether or not a value was reported for the number of days and hours the respondent's current spouse was helped by the respondent or their former spouse and are taken from RwRASCAREDPMM and RwRASCAREHRM. In addition to the special missing codes employed by the respondent variables, the spouse variables employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v

is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Respondents are not asked who helps them with ADLs in Wave 1 and for the HRS cohort in Wave 2. All variables listed above are not available in Wave 1.

In Wave 2 for those in the AHEAD cohort, respondents are asked to report one person who helps them with each individual ADL that they report someone helping them with. Starting in Wave 3, respondents are asked to report up to 7 people who help with ADLs.

In Wave 2, AHEAD respondents are asked whether anyone helps the respondent with each ADL prior to being asked if they have difficulty with each ADL, making this wave not completely comparable with the subsequent waves, although the coding has been adjusted to make this wave as comparable as possible.

Respondents are asked who helps them with ADLs starting in the AHEAD cohorts in Wave 2 and Wave 3. As such, RWRASCARE is available starting in the AHEAD cohorts in Wave 2 and Wave 3. Additionally, RWRASCAREN is available for the AHEAD cohort in Wave 2. If the respondent participated in the HRS cohort in Wave 2, then these variables are assigned special missing .q in Wave 2 because they were not asked this question.

In the AHEAD cohort in Wave 2, respondents can report that their spouse helps them with ADLs, and were asked how frequently and the number of hours that their spouse provides help. However, the frequency of help is not comparable to other waves and so RWRASCAREDPM and RWRASCAREDPMM are not available in the AHEAD cohort in Wave 2. The number of hours that their spouse helps is comparable, and so RWRASCAREHR and RWRASCAREHRM are available in the AHEAD cohort in Wave 2. If the respondent participated in the HRS cohort in Wave 2, then RWRASCAREHR and RWRASCAREHRM are assigned special missing .q in Wave 2 because they were not asked this question.

In Waves 3 and 4, respondents can report that their current spouse helps them with ADLs or IADLs. However, respondents are not asked about the number of days or number of hours that the respondent's spouse helps the respondent in these waves. As such, RWRASCAREN, RWRASCAREDPM, RWRASCAREDPMM, RWRASCAREHR, and RWRASCAREHRM are not available in Waves 3 and 4.

Starting in Wave 5, respondents are asked who helps them with ADLs, and are asked about the number of days and number of hours that the respondent's spouse helps the respondent. As such, RWRASCAREN, RWRASCAREDPM, RWRASCAREDPMM, RWRASCAREHR, and RWRASCAREHRM are available beginning in Wave 5.

## How Constructed:

The following variables indicate whether the respondent's children or grandchildren help the respondent with any ADL needs. The activities of daily living include dressing, walking across a room, bathing, eating, getting in and out of bed, and using the toilet. In the AHEAD cohort in Wave 2, the respondent is first asked whether anyone helps them with each ADL activity, then whether they have difficulty with it, and then who helps if they report receiving help with that activity. In Waves 3 and onward, if the respondent reports having difficulty with an ADL, then they are asked whether someone helps them with that activity. If someone helps with the activity, they are asked for the relationships of up to 7 people who help them with ADLs. The respondent is asked whether each reported helper is paid, unless that helper is the respondent's spouse or an employee of an institution. The information used to derive these variables is taken from the respondent-level and helper-level HRS helper files.

The following variables are coded as special missing .x if the respondent reports no difficulty with any ADL, and are coded as special missing .h if the respondent reports difficulty with an ADL but does not receive any help. For the AHEAD cohort in Wave 2, these variables are assigned special missing .f if the respondent reports receiving help from someone for difficulties with ADL activities "some of the time" or "occasionally", and not "most (all) of the time". Don't know, refused, or otherwise missing responses are assigned special missing values .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not participate in the current wave.

RwRACCARE, RwRACCAREN, RwRACCAREPDM, RwRACCAREDPMM, RwRACCAREHR, RwRACCAREHRM, and RwRACCAREPD include help from the respondent's child, spouse of child, grandchild, and spouse of grandchild in the AHEAD cohort in Wave 2. These variables include help from the respondent's child, child-in-law, unlisted child or child-in-law, step/partner child, and grandchild in Waves 3 through 5. These variables include help from the respondent's sons, step-sons, spouse/partner of daughters, son-in-laws, daughters, step-daughters, spouse/partner of sons, daughter-in-laws, grandchildren, unlisted children or children-in-law, former step-children, former children-in-law, spouse/partner of grandchildren, ambiguous child relation, and ambiguous child-in-law relation in Waves 6 and onward.

RwRACCARE indicates whether any of the respondent's children or grandchildren help the respondent with ADL needs. RwRACCAREN indicates the number of the respondent's children or grandchildren who help the respondent with ADL needs. RwRACCARE is coded as 0 if none of the respondent's children or grandchildren help the respondent with ADLs, and is coded as 1 if at least one of the respondent's children or grandchildren help the respondent with ADLs. In Wave 2, RwRACCARE and RwRACCAREN are assigned special

missing .q if the respondent participated in the HRS cohort in Wave 2. RWRACCARE and RWRACCAREN are not available in Wave 1.

RWRACCAREDPM indicates the number of total days per month the respondent's children or grandchildren help the respondent with ADL needs. This variable comprises converted responses reported in terms of 'Days in last month', 'Days per week', and 'Everyday'. Respondents were allowed to report the amount of time each helper assists in one of the three mentioned frequencies. RWRACCAREDPM is the sum of days per month for all children or grandchildren helpers, and so values can be over 31 days. RWRACCAREDPM is calculated as long as there is one non-missing value. RWRACCAREDPMM indicates the number of children or grandchildren who helped the respondent for whom no value of days was reported and was not accounted for in RWRACCAREDPM. RWRACCAREDPMM is assigned special missing .m if the respondent was not helped by any children or grandchildren or prior information was missing. RWRACCAREDPM and RWRACCAREDPMM are not available in Waves 1 and 2.

RWRACCAREHR indicates the number of hours per day the respondent's children or grandchildren help the respondent with ADL needs. Respondents are asked, on days their children or grandchildren help, how many hours per day that is. If the respondent reports less than an hour, then a 1 is recorded. RWRACCAREHR is the sum of hours per day for all children or grandchildren helpers, and so values can be over 24 hours. RWRACCAREHR is calculated as long as there is one non-missing value. RWRACCAREHRM indicates the number of children or grandchildren who helped the respondent for whom no value of hours was reported and was not accounted for in RWRACCAREHR. RWRACCAREHR is assigned a special missing .w in the AHEAD cohort of Wave 2 if this question is not asked because the respondent's children or grandchildren help less than once per week. RWRACCAREHRM is assigned special missing .m if the respondent was not helped by any children or grandchildren or prior information was missing. In Wave 2, RWRACCAREHR and RWRACCAREHRM are assigned special missing .q if the respondent participated in the HRS cohort in Wave 2. RWRACCAREHR and RWRACCAREHRM are not available in Wave 1.

RWRACCAREPD indicates whether any of the respondent's children or grandchildren helpers are paid for the care given to the respondent for ADL needs. RWRACCAREPD is assigned a value of 0 if the respondent receives no care from children or grandchildren, or the respondent does receive care from children or grandchildren and none of them are paid. RWRACCAREPD is assigned a value of 1 if the respondent receives care from children or grandchildren and at least one of them is paid for the care given to the respondent. RWRACCAREPD is assigned a special missing .w in the AHEAD cohort of Wave 2 if this question is not asked because the respondent's children or grandchildren help less than once per week. In Wave 2, RWRACCAREPD is assigned special missing .q if the respondent participated in the HRS cohort in Wave 2. RWRACCAREPD is not available in Wave 1.

SWRACCARE, SWRACCAREN, SWRACCAREDPM, SWRACCAREHR, and SWRACCAREPD indicate whether the respondent's current wave's spouse receives help from children or grandchildren, the number, the frequency with which, and whether any are paid, and their values are taken from RWRACCARE, RWRACCAREN, RWRACCAREDPM, RWRACCAREHR, and RWRACCAREPD. SWRACCAREDPMM and SWRACCAREHRM indicate the number of children who helped the respondent's current spouse for whom a value was not reported for the number of days and hours and are taken from RWRACCAREDPMM and RWRACCAREHRM. In addition to the special missing codes employed by the respondent variables, the spouse variables employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Respondents are not asked who helps them with ADLs at all in Wave 1 and for the HRS cohort in Wave 2. All variables listed above are not available in Wave 1.

In Wave 2 for those in the AHEAD cohort, respondents are asked to report one person who helps them with each individual ADL that they report someone helping them with. Starting in Wave 3, respondents are asked to report up to 7 people who help with ADLs.

In Wave 2, AHEAD respondents are asked whether anyone helps the respondent with each ADL prior to being asked if they have difficulty with each ADL, making this wave not completely comparable with the subsequent waves, although the coding has been adjusted to make this wave as comparable as possible.

Respondents are asked who helps them with ADLs, and whether they are paid starting in the AHEAD cohorts in Wave 2 and Wave 3. As such, RWRACCARE, RWRACCAREN, and RWRACCAREPD are available starting in the AHEAD

cohorts in Wave 2 and Wave 3. If the respondent participated in the HRS cohort in Wave 2, then RWRACCARE, RWRACCAREN, and RWRACCAREPD are assigned special missing .q in Wave 2 because they were not asked these questions.

In the AHEAD cohort in Wave 2, respondents can report that a child or grandchild helps them with ADLs, and were asked how frequently and the number of hours that the child or grandchild provides help. However, the frequency of help is not comparable to other waves and so RWRACCAREDPM and RWRACCAREDPMM are not available in this wave. The number of hours that the child or grandchild helps is comparable, and so RWRACCAREHR and RWRACCAREHRM are available in the AHEAD cohort in Wave 2. If the respondent participated in the HRS cohort in Wave 2, then RWRACCAREHR and RWRACCAREHRM are assigned special missing .q in Wave 2 because they were not asked this question.

Starting in Wave 3, respondents are asked who helps them with ADLs, and are asked about the number of days and number of hours that the respondent's child or grandchild helps the respondent. As such, RWRACCAREDPM and RWRACCAREDPMM are available beginning in Wave 3.

In the AHEAD cohort in Wave 2, respondents are not asked whether the helper is paid if they help less than once per week. Starting in Wave 3, respondents are asked whether the helper is paid regardless of the frequency of the help.

## How Constructed:

The following variables indicate whether any of the respondent's relatives help the respondent with any ADL needs. The activities of daily living include dressing, walking across a room, bathing, eating, getting in and out of bed, and using the toilet. In the AHEAD cohort in Wave 2, the respondent is first asked whether anyone helps them with each ADL activity, then whether they have difficulty with it, and then who helps if they report receiving help with that activity. In Waves 3 and onward, if the respondent reports having difficulty with an ADL, then they are asked whether someone helps them with that activity. If someone helps with the activity, they are asked for the relationships of up to 7 people who help them with ADLs. The respondent is asked whether each reported helper is paid, unless that helper is the respondent's spouse or an employee of an institution. The information used to derive these variables is taken from the respondent-level and helper-level HRS helper files.

The following variables are coded as special missing .x if the respondent reports no difficulty with any ADL, and are coded as special missing .h if the respondent reports difficulty with an ADL but does not receive any help. For the AHEAD cohort in Wave 2, these variables are assigned special missing .f if the respondent reports receiving help from someone for difficulties with ADL activities "some of the time" or "occasionally", and not "most (all) of the time". Don't know, refused, or otherwise missing responses are assigned special missing values .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not participate in the current wave.

RwRARCAPED, RwRARCAPEN, RwRARCAPEDPM, RwRARCAPEDPMM, RwRARCAPEDHR, RwRARCAPEDHRM, and RwRARCAPEDPD include help from the respondent's other relative in the AHEAD cohort in Wave 2. These variables include help from the respondent's sibling, sibling of spouse, parent or parent-in-law, and other relative in Waves 3 through 5. These variables include help from the respondent's father, father of spouse/partner, mother, mother of spouse/partner, parents, brother, brother of spouse/partner, sister, sister of spouse/partner, or other relative in Waves 6 and onward.

RwRARCAPED indicates whether any of the respondent's relatives help the respondent with ADL needs. RwRARCAPEN indicates the number of the respondent's relatives who help the respondent with ADL needs. RwRARCAPED is coded as 0 if none of the respondent's relatives help the respondent with ADLs, and is coded as 1 if at least one of the respondent's relatives help the respondent with ADLs. In Wave 2, RwRARCAPED and RwRARCAPEN are assigned special missing .q if the respondent participated in the HRS cohort in Wave 2. RwRARCAPED and RwRARCAPEN are not available in Wave 1.

RwRARCAPEDPM indicates the number of total days per month the respondent's relatives help the respondent with ADL needs. This variable comprises converted responses reported in terms of 'Days in last month',

'Days per week', and 'Everyday'. Respondents were allowed to report the amount of time each helper assists in one of the three mentioned frequencies. RWRARCAREDPM is the sum of days per month for all relative helpers, and so values can be over 31 days. RWRARCAREDPM is calculated as long as there is one non-missing value. RWRARCAREDPMM indicates the number of relatives who helped the respondent for whom no value of days was reported and was not accounted for in RWRARCAREDPM. RWRARCAREDPMM is assigned special missing .m if the respondent was not helped by any relatives or prior information was missing. RWRARCAREDPM and RWRARCAREDPMM are not available in Waves 1 and 2.

RWRARCAREHR indicates the number of hours per day the respondent's relatives help the respondent with ADL needs. Respondents are asked, on days their relatives help, how many hours per day that is. If the respondent reports less than an hour, then a 1 is recorded. RWRARCAREHR is the sum of hours per day for all relative helpers, and so values can be over 24 hours. RWRARCAREHR is calculated as long as there is one non-missing value. RWRARCAREHRM indicates the number of relatives who helped the respondent for whom no value of hours was reported and was not accounted for in RWRARCAREHR. RWRARCAREHR is assigned a special missing .w in the AHEAD cohort of Wave 2 if this question is not asked because the respondent's relatives help less than once per week. RWRARCAREHRM is assigned special missing .m if the respondent was not helped by any relatives or prior information was missing. In Wave 2, RWRARCAREHR and RWRARCAREHRM are assigned special missing .q if the respondent participated in the HRS cohort in Wave 2. RWRARCAREHR and RWRARCAREHRM are not available in Wave 1.

RWRARCAREPD indicates whether any of the respondent's relative helpers are paid for the care given to the respondent for ADL needs. RWRARCAREPD is assigned a value of 0 if the respondent receives no care from relatives, or the respondent does receive care from relatives and none of them are paid. RWRARCAREPD is assigned a value of 1 if the respondent receives care from relatives and at least one of them is paid for the care given to the respondent. RWRARCAREPD is assigned a special missing .w in the AHEAD cohort of Wave 2 if this question is not asked because the respondent's relatives help less than once per week. In Wave 2, RWRARCAREPD is assigned special missing .q if the respondent participated in the HRS cohort in Wave 2. RWRARCAREPD is not available in Wave 1.

SWRARCARE, SWRARCAREN, SWRARCAREDPM, SWRARCAREHR, and SWRARCAREPD indicate whether the respondent's current wave's spouse receives help from relatives, the number, the frequency with which, and whether any are paid, and their values are taken from RWRARCARE, RWRARCAREN, RWRARCAREDPM, RWRARCAREHR, and RWRARCAREPD. SWRARCAREDPMM and SWRARCAREHRM indicate the number of relatives who helped the respondent's current spouse for whom a value was not reported for the number of days and hours and are taken from RWRARCAREDPMM and RWRARCAREHRM. In addition to the special missing codes employed by the respondent variables, the spouse variables employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Respondents are not asked who helps them with ADLs at all in Wave 1 and in the HRS cohort in Wave 2. All variables listed above are not available in Wave 1.

In Wave 2 for those in the AHEAD cohort, respondents are asked to report one person who helps them with each individual ADL that they report someone helping them with. Starting in Wave 3, respondents are asked to report up to 7 people who help with ADLs.

In Wave 2, AHEAD respondents are asked whether anyone helps the respondent with each ADL prior to being asked if they have difficulty with each ADL, making this wave not completely comparable with the subsequent waves, although the coding has been adjusted to make this wave as comparable as possible.

Respondents are asked who helps them with ADLs, and whether they are paid starting in the AHEAD cohorts in Wave 2 and Wave 3. As such, RWRARCARE, RWRARCAREN, and RWRARCAREPD are available starting in the AHEAD cohorts in Wave 2 and Wave 3. If the respondent participated in the HRS cohort in Wave 2, then RWRARCARE, RWRARCAREN, and RWRARCAREPD are assigned special missing .q in Wave 2 because they were not asked these questions.

In the AHEAD cohort in Wave 2, respondents can report that a relative helps them with ADLs, and were asked how frequently and the number of hours that the relative provides help. However, the frequency of help is not comparable to other waves and so RWRARCAREDPM and RWRARCAREDPMM are not available in this wave. The number of hours that the relative helps is comparable, and so RWRARCAREHR and RWRARCAREHRM are

available in this wave. If the respondent participated in the HRS cohort in Wave 2, then RWRARCAREHR and RWRARCAREHRM are assigned special missing .q in Wave 2 because they were not asked this question.

Starting in Wave 3, respondents are asked who helps them with ADLs, and are asked about the number of days or number of hours that the respondent's relative helps the respondent. As such, RWRARCAREDPM and RWRARCAREDPMM are available beginning in Wave 3.

In the AHEAD cohort in Wave 2, respondents are not asked whether the helper is paid if they help less than once per week. Starting in Wave 3, respondents are asked whether the helper is paid regardless of the frequency of the help.

## How Constructed:

The following variables indicate whether any non-relative helps the respondent with any ADL needs. The activities of daily living include dressing, walking across a room, bathing, eating, getting in and out of bed, and using the toilet. In the AHEAD cohort in Wave 2, the respondent is first asked whether anyone helps them with each ADL activity, then whether they have difficulty with it, and then who helps if they report receiving help with that activity. In Waves 3 and onward, if the respondent reports having difficulty with an ADL, then they are asked whether someone helps them with that activity. If someone helps with the activity, they are asked for the relationships of up to 7 people who help them with ADLs. The respondent is asked whether each reported helper is paid, unless that helper is the respondent's spouse or an employee of an institution. The information used to derive these variables is taken from the respondent-level and helper-level HRS helper files.

The following variables are coded as special missing .x if the respondent reports no difficulty with any ADL, and are coded as special missing .h if the respondent reports difficulty with an ADL but does not receive any help. For the AHEAD cohort in Wave 2, these variables are assigned special missing .f if the respondent reports receiving help from someone for difficulties with ADL activities "some of the time" or "occasionally", and not "most (all) of the time". Don't know, refused, or otherwise missing responses are assigned special missing values .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not participate in the current wave.

RwRAFCARE, RwRAFCAREN, RwRAFCAREDP, RwRAFCAREDPMM, RwRAFCAREHR, RwRAFCAREHRM, and RwRAFCAREPD include help from other individuals in the AHEAD cohort in Wave 2 and in Waves 3 through 5. These variables include help from other individuals and persons of unknown relationships in Waves 6 and onward.

RwRAFCARE indicates whether any of the respondent's non-relatives help the respondent with ADL needs. RwRAFCAREN indicates the number of the respondent's non-relatives who help the respondent with ADL needs. RwRAFCARE is coded as 0 if none of the respondent's non-relatives help the respondent with ADLs, and is coded as 1 if at least one of the respondent's non-relatives help the respondent with ADLs. In Wave 2, RwRAFCARE and RwRAFCAREN are assigned special missing .q if the respondent participated in the HRS cohort in Wave 2. RwRAFCARE and RwRAFCAREN are not available in Wave 1.

RwRAFCAREDPM indicates the number of total days per month the respondent's non-relatives help the respondent with ADL needs. This variable comprises converted responses reported in terms of 'Days in last month', 'Days per week', and 'Everyday'. Respondents were allowed to report the amount of time each helper assists in one of the three mentioned frequencies. RwRAFCAREDPM is the sum of days per month for

all non-relative helpers, and so values can be over 31 days. RWR AFCAREDPM is calculated as long as there is one non-missing value. RWR AFCAREDPMM indicates the number of non-relatives who helped the respondent for whom no value of days was reported and was not accounted for in RWR AFCAREDPM. RWR AFCAREDPMM is assigned special missing .m if the respondent was not helped by any non-relatives or prior information was missing. RWR AFCAREDPM and RWR AFCAREDPMM are not available in Waves 1 and 2.

RWR AFCAREHR indicates the number of hours per day the respondent's non-relatives help the respondent with ADL needs. Respondents are asked, on days their non-relatives help, how many hours per day that is. If the respondent reports less than an hour, then a 1 is recorded. RWR AFCAREHR is the sum of hours per day for all non-relative helpers, and so values can be over 24 hours. RWR AFCAREHR is calculated as long as there is one non-missing value. RWR AFCAREHRM indicates the number of non-relatives who helped the respondent for whom no value of hours was reported and was not accounted for in RWR AFCAREHR. RWR AFCAREHR is assigned a special missing .w in the AHEAD cohort in Wave 2 if this question is not asked because the respondent's non-relative helpers help less than once per week. RWR AFCAREHRM is assigned special missing .m if the respondent was not helped by any non-relatives or prior information was missing. In Wave 2, RWR AFCAREHR and RWR AFCAREHRM are assigned special missing .q if the respondent participated in the HRS cohort in Wave 2. RWR AFCAREHR and RWR AFCAREHRM are not available in Wave 1.

RWR AFCAREPD indicates whether any of the respondent's non-relative helpers are paid for the care given to the respondent for ADL needs. RWR AFCAREPD is assigned a value of 0 if the respondent receives no care from non-relatives, or the respondent does receive care from non-relatives and none of them are paid. RWR AFCAREPD is assigned a value of 1 if the respondent receives care from non-relatives and at least one of them is paid for the care given to the respondent. RWR AFCAREPD is assigned a special missing .w in the AHEAD cohort in Wave 2 if this question is not asked because the respondent's non-relative helpers help less than once per week. In Wave 2, RWR AFCAREPD is assigned special missing .q if the respondent participated in the HRS cohort in Wave 2. RWR AFCAREPD is not available in Wave 1.

SWR AFCARE, SWR AFCAREN, SWR AFCAREDPM, SWR AFCAREHR, and SWR AFCAREPD indicate whether the respondent's current wave's spouse receives help from non-relatives, the number, the frequency with which, and whether any are paid, and their values are taken from RWR AFCARE, RWR AFCAREN, RWR AFCAREDPM, RWR AFCAREHR, and RWR AFCAREPD. SWR AFCAREDPMM and SWR AFCAREHRM indicate the number of non-relatives who helped the respondent's current spouse for whom a value was not reported for the number of days and hours and are taken from RWR AFCAREDPMM and RWR AFCAREHRM. In addition to the special missing codes employed by the respondent variables, the spouse variables employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Respondents are not asked who helps them with ADLs at all in Wave 1 and for the HRS cohort in Wave 2. All variables listed above are not available in Wave 1.

In Wave 2 for those in the AHEAD cohort, respondents are asked to report one person who helps them with each individual ADL that they report someone helping them with. Starting in Wave 3, respondents are asked to report up to 7 people who help with ADLs.

In Wave 2, AHEAD respondents are asked whether anyone helps the respondent with each ADL prior to being asked if they have difficulty with each ADL, making this wave not completely comparable with the subsequent waves, although the coding has been adjusted to make this wave as comparable as possible.

Respondents are asked who helps them with ADLs, and whether they are paid starting in the AHEAD cohorts in Wave 2 and Wave 3. As such, RWR AFCARE, RWR AFCAREN, and RWR AFCAREPD are available starting in the AHEAD cohorts in Wave 2 and Wave 3. If the respondent participated in the HRS cohort in Wave 2, then RWR AFCARE, RWR AFCAREN, and RWR AFCAREPD are assigned special missing .q in Wave 2 because they were not asked these questions.

In the AHEAD cohort in Wave 2, respondents can report that a non-relative helps them with ADLs, and were asked how frequently and the number of hours that the non-relative provides help. However, the frequency of help is not comparable to other waves and so RWR AFCAREDPM and RWR AFCAREDPMM are not available in this wave. The number of hours that the non-relative helps is comparable, and so RWR AFCAREHR and RWR AFCAREHRM are available in this wave. If the respondent participated in the HRS cohort in Wave 2, then RWR AFCAREHR and RWR AFCAREHRM are assigned special missing .q in Wave 2 because they were not asked this question.

Starting in Wave 3, respondents are asked who helps them with ADLs, and are asked about the number of days or number of hours that the respondent's non-relative helps the respondent. As such, RwfAFCAREDPm and RwfAFCAREDPmM are available beginning in Wave 3.

In the AHEAD cohort in Wave 2, respondents are not asked whether the helper is paid if they help less than once per week. Starting in Wave 3, respondents are asked whether the helper is paid regardless of the frequency of the help.

### How Constructed:

RwRAFAANY indicates whether the respondent receives any formal care for difficulties with activities of daily living (ADL). The activities of daily living include dressing, walking across a room, bathing, eating, getting in and out of bed, and using the toilet. In the AHEAD cohort in Wave 2, if the respondent

reports having difficulty with an ADL, then they are asked whether someone helps them with that activity, and if so, who helps them with that activity. In Waves 3 and onward, if the respondent reports having difficulty with an ADL, then they are asked whether someone helps them with that activity. If someone helps with the activity, they are asked for the relationships of up to 7 people who help them with ADLs. The information used to derive this variable is taken from the respondent-level and helper-level HRS helper files.

For the AHEAD cohort in Wave 2, the following relationship is considered to provide formal care: organization/agency. In Waves 3 through 5, the following relationships are considered to provide formal care: professional, employee of institution, and organization. In Waves 6 and onward, the following relationships are considered to provide formal care: organization, employee of institution, paid helper, professional, and specified professional.

RwRAFAANY is assigned a value of 0 if the respondent has difficulty with at least one ADL but receives no help with the activity from a formal caregiver or does not receive any help at all. RwRAFAANY is assigned a value of 1 if the respondent has difficulty with at least one ADL and a formal caregiver helps with at least one of the activities. RwRAFAANY is assigned special missing .x if the respondent has no difficulty with any ADLs. Respondents in the AHEAD cohort in Wave 2 are not asked who helps them with ADLs if they report receiving help with the ADL some of the time or occasionally (as opposed to most/all of the time), in which case RwRAFAANY is assigned special missing .f. These questions are not asked for the HRS cohort in Wave 2, so RwRAFAANY is assigned special missing .q in this wave. Don't know, refused, and other missing responses are assigned special missing .d, .r, and .m, respectively. RwRAFAANY is assigned a blank missing (.) if the respondent did not participate in the current wave.

SwRAFAANY indicates whether the respondent's current wave's spouse receives any formal care for difficulties with ADLs, and its values are taken from RwRAFAANY. In addition to the special missing codes employed by RwRAFAANY, SwRAFAANY employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

These questions are not asked at all in Wave 1 and for the HRS cohort in Wave 2.

In the AHEAD cohort in Wave 2, if the respondent reports receiving help with an ADL, then they are asked how frequently they receive help with that activity. If the respondent reports receiving help most/all of the time, then they are asked who helps them with that activity. They are not asked who helps them if they report receiving help some of the time or occasionally.

In Waves 3 and onward, if the respondent reports having difficulty with an ADL, then they are asked whether someone helps them with that activity. If someone helps with the activity, they are asked for the relationships of up to 7 people who help them with ADLs.

The options for type of relationship change slightly between the AHEAD cohort in Wave 2, Waves 3 through 5, and Waves 6 and onward, but these categories have been combined to keep the definitions as similar as possible between waves for RwRAFAANY.

## How Constructed:

The following variables indicate whether paid formal caregivers help the respondent with any ADL needs. The activities of daily living include dressing, walking across a room, bathing, eating, getting in and out of bed, and using the toilet. In the AHEAD cohort in Wave 2, the respondent is first asked whether anyone helps them with each ADL activity, then whether they have difficulty with it, and then who helps if they report receiving help with that activity. In Waves 3 and onward, if the respondent reports having difficulty with an ADL, then they are asked whether someone helps them with that activity. If someone helps with the activity, they are asked for the relationships of up to 7 people who help them with ADLs. The respondent is asked whether each reported helper is paid, unless that helper is the respondent's spouse or an employee of an institution. The information used to derive these variables is taken from the respondent-level and helper-level HRS helper files.

The following variables are coded as special missing .x if the respondent reports no difficulty with any ADL, and are coded as special missing .h if the respondent reports difficulty with an ADL but does not receive any help. For the AHEAD cohort in Wave 2, these variables are assigned special missing .f if the respondent reports receiving help from someone for difficulties with ADL activities "some of the time" or "occasionally", and not "most (all) of the time". Don't know, refused, or otherwise missing responses are assigned special missing values .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not participate in the current wave.

RwRAPFCARE, RwRAPFCAREN, RwRAPFCAREDPM, RwRAPFCAREDPMM, RwRAPFCAREHR, and RwRAPFCAREHRM include help from an organization/agency if they are reported to be paid for the AHEAD cohort in Wave 2. These variables include help from a professional, employee of institution, and organization if they are reported to be

paid in Waves 3 through 5. These variables include help from organizations, paid helpers, professionals, or specified professionals if they are reported to be paid in Wave 6 and onward. These variables also include help from employees of institutions, who are assumed to be paid but are not explicitly asked about in Waves 6 and onward.

RwRAPFCARE indicates whether any paid professionals help the respondent with ADL needs. RwRAPFCAREN indicates the number of paid professionals who help the respondent with ADL needs. RwRAPFCARE is coded as 0 if no paid professionals help the respondent with ADLs, and is coded as 1 if at least one paid professional helps the respondent with ADLs. In Wave 2, RwRAPFCARE and RwRAPFCAREN are assigned special missing .q if the respondent participated in the HRS cohort in Wave 2. RwRAPFCARE and RwRAPFCAREN are not available in Wave 1.

RwRAPFCAREDPM indicates the number of total days per month paid professionals help the respondent with ADL needs. This variable comprises converted responses reported in terms of 'Days in last month', 'Days per week', and 'Everyday'. Respondents were allowed to report the amount of time each helper assists in one of the three mentioned frequencies. RwRAPFCAREDPM is the sum of days per month for all paid professional helpers, and so values can be over 31 days. RwRAPFCAREDPM is calculated as long as there is one non-missing value. If the respondent's only paid professional helper is an employee of an institution, then the respondent is not asked how many days the respondent receives help, and RwRAPFCAREDPM is assigned special missing .e starting in Wave 6. RwRAPFCAREDPMM indicates the number of paid professionals who helped the respondent for whom no value of days was reported and was not accounted for in RwRAPFCAREDPM, including if the respondent is helped by an employee of an institution. RwRAPFCAREDPMM is assigned special missing .m if the respondent was not helped by any paid professionals or prior information was missing. RwRAPFCAREDPM and RwRAPFCAREDPMM are not available in Waves 1 and 2.

RwRAPFCAREHR indicates the number of hours per day paid professionals help the respondent with ADL needs. Respondents are asked, on days paid professionals help, how many hours per day that is. If the respondent reports less than an hour, then a 1 is recorded. RwRAPFCAREHR is the sum of hours per day for all paid professional helpers, and so values can be over 24 hours. RwRAPFCAREHR is calculated as long as there is one non-missing value. If the respondent's only paid professional helper is an employee of an institution, then the respondent is not asked how many hours the respondent receives help, and RwRAPFCAREHR is assigned special missing .e starting in Wave 6. RwRAPFCAREHRM indicates the number of paid professionals who helped the respondent for whom no value of hours was reported and was not accounted for in RwRAPFCAREHR, including if the respondent is helped by an employee of an institution. RwRAPFCAREHRM is assigned special missing .m if the respondent was not helped by any paid professionals or prior information was missing. In Wave 2, RwRAPFCAREHR and RwRAPFCAREHRM are assigned special missing .q if the respondent participated in the HRS cohort in Wave 2. RwRAPFCAREHR and RwRAPFCAREHRM are not available in Wave 1.

SwRAPFCARE, SwRAPFCAREN, SwRAPFCAREDPM, and SwRAPFCAREHR indicate whether the respondent's current wave's spouse receives help from paid professionals, the number, and the frequency with which, and their values are taken from RwRAPFCARE, RwRAPFCAREN, RwRAPFCAREDPM, and RwRAPFCAREHR. SwRAPFCAREDPMM and SwRAPFCAREHRM indicate the number of paid professionals who helped the respondent's current spouse for whom a value was not reported for the number of days and hours and are taken from RwRAPFCAREDPMM and RwRAPFCAREHRM. In addition to the special missing codes employed by the respondent variables, the spouse variables employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Respondents are not asked who helps them with ADLs at all in Wave 1 and for the HRS cohort in Wave 2. All variables listed above are not available in Wave 1.

In Wave 2 for those in the AHEAD cohort, respondents are asked to report one person who helps them with each individual ADL that they report someone helping them with. Starting in Wave 3, respondents are asked to report up to 7 people who help with ADLs.

In Wave 2, AHEAD respondents are asked whether anyone helps the respondent with each ADL prior to being asked if they have difficulty with each ADL, making this wave not completely comparable with the subsequent waves, although the coding has been adjusted to make this wave as comparable as possible.

Respondents are asked who helps them with ADLs, and whether they are paid starting in the AHEAD cohorts in Wave 2 and Wave 3. As such, RWRAPFCARE and RWRAPFCAREN are available starting in the AHEAD cohorts in Wave 2 and Wave 3. If the respondent participated in the HRS cohort in Wave 2, then RWRAPFCARE and RWRAPFCAREN are assigned special missing .q in Wave 2 because they were not asked these questions.

In the AHEAD cohort in Wave 2, respondents can report that a paid professional helps them with ADLs, and were asked how frequently and the number of hours that the paid professional provides help. However, the frequency of help is not comparable to other waves and so RWRAPFCAREDPM and RWRAPFCAREDPMM are not available in this wave. The number of hours that the paid professional helps is comparable, and so RWRAPFCAREHR and RWRAPFCAREHRM are available in this wave. If the respondent participated in the HRS cohort in Wave 2, then RWRAPFCAREHR and RWRAPFCAREHRM are assigned special missing .q in Wave 2 because they were not asked this question.

Starting in Wave 3, respondents are asked who helps them with ADLs, and are asked about the number of days or number of hours that a paid professional helps the respondent. As such, RWRAPFCAREDPM and RWRAPFCAREDPMM are available beginning in Wave 3.

Starting in Wave 6, if the respondent's helper is an employee of an institution, then the respondent is not asked for the number of days or hours that the respondent receives help from that helper, and RWRAPFCAREDPM and RWRAPFCAREHR are assigned special missing .e if this is the only type of paid professional helper the respondent has.

## How Constructed:

The following variables indicate whether unpaid formal caregivers help the respondent with any ADL needs. The activities of daily living include dressing, walking across a room, bathing, eating, getting in and out of bed, and using the toilet. In the AHEAD cohort in Wave 2, the respondent is first asked whether anyone helps them with each ADL activity, then whether they have difficulty with it, and then who helps if they report receiving help with that activity. In Waves 3 and onward, if the respondent reports having difficulty with an ADL, then they are asked whether someone helps them with that activity. If someone helps with the activity, they are asked for the relationships of up to 7 people who help them with ADLs. The respondent is asked whether each reported helper is paid, unless that helper is the respondent's spouse or an employee of an institution. The information used to derive these variables is taken from the respondent-level and helper-level HRS helper files.

The following variables are coded as special missing .x if the respondent reports no difficulty with any ADL, and are coded as special missing .h if the respondent reports difficulty with an ADL but does not receive any help. For the AHEAD cohort in Wave 2, these variables are assigned special missing .f if the respondent reports receiving help from someone for difficulties with ADL activities "some of the time" or "occasionally", and not "most (all) of the time". Don't know, refused, or otherwise missing responses are assigned special missing values .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not participate in the current wave.

RwRAUFCARE, RwRAUFCAREN, RwRAUFCAREDPM, RwRAUFCAREDPMM, RwRAUFCAREHR, and RwRAUFCAREHRM include help from an organization/agency if they are reported to not be paid for the AHEAD cohort in Wave 2. These variables include help from a professional, employee of institution, and organization if they are

reported to not be paid in Waves 3 through 5. These variables include help from organizations, paid helpers, professionals, or specified professionals if they are reported to not be paid in Wave 6 and onward.

RwRAUFCARE indicates whether any unpaid professionals help the respondent with ADL needs. RwRAUFCAREN indicates the number of unpaid professionals who help the respondent with ADL needs. RwRAUFCARE is coded as 0 if no unpaid professionals help the respondent with ADLs, and is coded as 1 if at least one unpaid professional helps the respondent with ADLs. In Wave 2, RwRAUFCARE and RwRAUFCAREN are assigned special missing .q if the respondent participated in the HRS cohort in Wave 2. RwRAUFCARE and RwRAUFCAREN are not available in Wave 1.

RwRAUFCAREDPM indicates the number of total days per month unpaid professionals help the respondent with ADL needs. This variable comprises converted responses reported in terms of 'Days in last month', 'Days per week', and 'Everyday'. Respondents were allowed to report the amount of time each helper assists in one of the three mentioned frequencies. RwRAUFCAREDPM is the sum of days per month for all unpaid professional helpers, and so values can be over 31 days. RwRAUFCAREDPM is calculated as long as there is one non-missing value. RwRAUFCAREDPMM indicates the number of unpaid professionals who helped the respondent for whom no value of days was reported and was not accounted for in RwRAUFCAREDPM. RwRAUFCAREDPMM is assigned special missing .m if the respondent was not helped by any unpaid professionals or prior information was missing. RwRAUFCAREDPM and RwRAUFCAREDPMM are not available in Waves 1 and 2.

RwRAUFCAREHR indicates the number of hours per day unpaid professionals help the respondent with ADL needs. Respondents are asked, on days unpaid professionals help, how many hours per day that is. If the respondent reports less than an hour, then a 1 is recorded. RwRAUFCAREHR is the sum of hours per day for all unpaid professional helpers, and so values can be over 24 hours. RwRAUFCAREHR is calculated as long as there is one non-missing value. RwRAUFCAREHRM indicates the number of unpaid professionals who helped the respondent for whom no value of hours was reported and was not accounted for in RwRAUFCAREHR. RwRAUFCAREHRM is assigned special missing .m if the respondent was not helped by any unpaid professionals or prior information was missing. In Wave 2, RwRAUFCAREHR and RwRAUFCAREHRM are assigned special missing .q if the respondent participated in the HRS cohort in Wave 2. RwRAUFCAREHR and RwRAUFCAREHRM are not available in Wave 1.

SwRAUFCARE, SwRAUFCAREN, SwRAUFCAREDPM, and SwRAUFCAREHR indicate whether the respondent's current wave's spouse receives help from unpaid professionals, the number, and the frequency with which, and their values are taken from RwRAUFCARE, RwRAUFCAREN, RwRAUFCAREDPM, and RwRAUFCAREHR. SwRAUFCAREDPMM and SwRAUFCAREHRM indicate the number of unpaid professionals who helped the respondent's current spouse for whom a value was not reported for the number of days and hours and are taken from RwRAUFCAREDPMM and RwRAUFCAREHRM. In addition to the special missing codes employed by the respondent variables, the spouse variables employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Respondents are not asked who helps them with ADLs at all in Wave 1 and for the HRS cohort in Wave 2. All variables listed above are not available in Wave 1.

In Wave 2 for those in the AHEAD cohort, respondents are asked to report one person who helps them with each individual ADL that they report someone helping them with. Starting in Wave 3, respondents are asked to report up to 7 people who help with ADLs.

In Wave 2, AHEAD respondents are asked whether anyone helps the respondent with each ADL prior to being asked if they have difficulty with each ADL, making this wave not completely comparable with the subsequent waves, although the coding has been adjusted to make this wave as comparable as possible.

Respondents are asked who helps them with ADLs, and whether they are paid starting in the AHEAD cohorts in Wave 2 and Wave 3. As such, RwRAUFCARE and RwRAUFCAREN are available starting in the AHEAD cohorts in Wave 2 and Wave 3. If the respondent participated in the HRS cohort in Wave 2, then RwRAUFCARE and RwRAUFCAREN are assigned special missing .q in Wave 2 because they were not asked these questions.

In the AHEAD cohort in Wave 2, respondents can report that an unpaid professional helps them with ADLs, and were asked how frequently and the number of hours that the unpaid professional provides help.

However, the frequency of help is not comparable to other waves and so R<sub>w</sub>RAUFCAREDP<sub>m</sub> and R<sub>w</sub>RAUFCAREDP<sub>mm</sub> are not available in this wave. The number of hours that the unpaid professional helps is comparable, and so R<sub>w</sub>RAUFCAREHR and R<sub>w</sub>RAUFCAREHRM are available in this wave. If the respondent participated in the HRS cohort in Wave 2, then R<sub>w</sub>RAUFCAREHR and R<sub>w</sub>RAUFCAREHRM are assigned special missing .q in Wave 2 because they were not asked this question.

Starting in Wave 3, respondents are asked who helps them with ADLs, and are asked about the number of days or number of hours that an unpaid professional helps the respondent. As such, R<sub>w</sub>RAUFCAREDP<sub>m</sub> and R<sub>w</sub>RAUFCAREDP<sub>mm</sub> are available beginning in Wave 3.

## HRS Variables Used:

### RAND HRS:

R10BATHA	r10batha:w10 r any diff-bathing, shower

**How Constructed:**

The following variables indicate whether a paid helper helps the respondent with any ADL needs. The activities of daily living include dressing, walking across a room, bathing, eating, getting in and out of bed, and using the toilet. In the AHEAD cohort in Wave 2, the respondent is first asked whether anyone helps them with each ADL activity, then whether they have difficulty with it, and then who helps if they report receiving help with that activity. In Waves 3 and onward, if the respondent reports having difficulty with an ADL, then they are asked whether someone helps them with that activity. If someone helps with the activity, they are asked for the relationships of up to 7 people who help them with ADLs. The respondent is asked whether each reported helper is paid, unless that helper is the respondent's spouse or an employee of an institution. The information used to derive these variables is taken from the respondent-level and helper-level HRS helper files.

The following variables are coded as special missing .x if the respondent reports no difficulty with any ADL, and are coded as special missing .h if the respondent reports difficulty with an ADL but does not receive any help. They are coded as special missing .s if the respondent's spouse is the only person who helps with ADL difficulties. For the AHEAD cohort in Wave 2, these variables are assigned special missing .f if the respondent reports receiving help from someone for difficulties with ADL activities "some of the time" or "occasionally", and not "most (all) of the time". Don't know, refused, or otherwise missing responses are assigned special missing values .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not participate in the current wave.

RwAHLPPDN indicates the number of helpers who are paid to help the respondent with ADL needs. This question is asked for every helper the respondent reported helped them (children and grandchildren, relatives, non-relatives, and professionals), but is not asked for help from spouses or from employees of an institution starting in Wave 6. Employees of institutions are included in the count of helpers who are paid to help the respondent. In the AHEAD cohort in Wave 2, if the respondent is helped less than once per week, then the question is not asked and RwAHLPPDN is assigned special missing .w in Wave 2. In Wave 2, RwAHLPPDN is assigned special missing .q if the respondent participated in the HRS cohort in Wave 2. RwAHLPPDN is not available in Wave 1.

SwAHLPPDN indicates the number of helpers who are paid to help the respondent's current wave's spouse and is taken directly from RwAHLPPDN. In addition to the special missing codes employed by RwAHLPPDN, SwAHLPPDN employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwAHLPPDIN indicates the number of paid helpers for ADLs for whom Medicaid, the state's version of Medicaid, or insurance helps pay for. RwAHLPPDIN is assigned a value of 0 if the respondent has no paid helpers for ADLs. This question is asked for every helper the respondent reported was paid to help them (children and grandchildren, relatives, non-relatives, and professionals), but is not asked for help from spouses or from employees of an institution starting in Wave 6. As such, if the respondent's only helper is their spouse, then special missing .s is assigned, and if the respondent's only helper is an employee of an institution, then special missing .e is assigned. In the AHEAD cohort in Wave 2, if the respondent is helped less than once per week, then the question is not asked and RwAHLPPDIN is assigned special missing .w in Wave 2. In Wave 2, RwAHLPPDIN is assigned special missing .q if the respondent participated in the HRS cohort in Wave 2. RwAHLPPDIN is not available in Wave 1.

SwAHLPPDIN indicates the number of paid helpers of the respondent's current wave's spouse for whom Medicaid, the state's version of Medicaid, or insurance helps pay for and is taken directly from RwAHLPPDIN. In addition to the special missing codes employed by RwAHLPPDIN, SwAHLPPDIN employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwAHLPPDAMT indicates the total monthly out-of-pocket cost for the respondent's paid caregiving for ADLs. RwAHLPPDAMT is the sum of the out-of-pocket monthly costs paid for all paid helpers. RwAHLPPDAMT is assigned a value of 0 if the respondent has no paid helpers for ADLs. The amount the respondent and their spouse paid for each caregiver (not accounting expenses paid by Medicaid, the state's version of Medicaid, or insurance) is asked for every paid helper the respondent reported helped them (children and grandchildren, relatives, non-relatives, and professionals), but is not asked for help from spouses or from employees of an institution starting in Wave 6. As such, if the respondent's only helper is their spouse, then special missing .s is assigned, and if the respondent's only helper is an employee of an institution, then special missing .e is assigned. In the AHEAD cohort in Wave 2, if the respondent is helped less than once per week, then the question is not asked and RwAHLPPDAMT is assigned special

missing .w in Wave 2. RWAHLPPDAMTM indicates the number of paid helpers who helped the respondent for whom no amount of out-of-pocket cost was reported and was not accounted for in RWAHLPPDAMT, including if the helper was the respondent's spouse or an employee of an institution. In Wave 2, RWAHLPPDAMT is assigned special missing .q if the respondent participated in the HRS cohort in Wave 2. RWAHLPPDAMT is not available in Wave 1.

SWAHLPPDAMT indicates the total monthly out-of-pocket cost for the respondent's current wave's spouse's paid caregiving, and its values are taken from RWAHLPPDAMT. SWAHLPPDAMTM indicates the number of paid helpers who helped the respondent's current spouse for whom no amount of out-of-pocket cost was reported and is taken from RWAHLPPDAMTM. In addition to the special missing codes employed by RWAHLPPDAMT and RWAHLPPDAMTM, SWAHLPPDAMT and SWAHLPPDAMTM employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Respondents are not asked who helps them with ADLs at all in Wave 1 and for the HRS cohort in Wave 2. All variables listed above are not available in Wave 1.

In Wave 2 for those in the AHEAD cohort, respondents are asked to report one person who helps them with each individual ADL that they report someone helping them with. Starting in Wave 3, respondents are asked to report up to 7 people who help with ADLs.

In Wave 2, AHEAD respondents are asked whether anyone helps the respondent with each ADL prior to being asked if they have difficulty with each ADL, making this wave not completely comparable with the subsequent waves, although the coding has been adjusted to make this wave as comparable as possible.

Only in the AHEAD cohort in Wave 2, the respondent is not asked these questions if their helper helps less than once per week. In this wave, RWAHLPPDN, RWAHLPPDIN, and RWAHLPPDAMT are assigned special missing .w in Wave 2 if the respondent is not asked these questions because their helper helps less than once per week.

Respondents are asked who helps them with ADLs starting in the AHEAD cohorts in Wave 2 and Wave 3. As such, RWAHLPPDN, RWAHLPPDIN, RWAHLPPDAMT, and RWAHLPPDAMTM are available starting in the AHEAD cohorts in Wave 2 and Wave 3. If the respondent participated in the HRS cohort in Wave 2, then RWAHLPPDN, RWAHLPPDIN, RWAHLPPDAMT, and RWAHLPPDAMTM are assigned special missing .q in Wave 2 because they were not asked this question.

In all available waves, the respondent is not asked these questions if their spouse is their only helper, and these variables are assigned special missing .s. The respondent is also not asked these questions if their only helper is an employee of an institution starting in Wave 6, in which case, these helpers are added to the count of paid helpers in RWAHLPPDN, are assigned special missing .e in RWAHLPPDIN and RWAHLPPDAMT, and add to the count of missing values in RWAHLPPDAMTM.

### How Constructed:

RwRICANY indicates whether the respondent receives any care for difficulties with instrumental activities of daily living (IADL). If the respondent reports having difficulty with an IADL, then they are asked whether someone helps them with that activity. The instrumental activities of daily living include preparing meals, grocery shopping, making phone calls, taking medications, and managing money. RwRICANY is assigned a value of 0 if the respondent has difficulty with at least one IADL but receives no help with the activity. RwRICANY is assigned a value of 1 if the respondent has difficulty with at least one IADL and someone helps with at least one of the activities. RwRICANY is assigned special missing .x if the respondent has no difficulty with any IADLs. Because the questions asked to the AHEAD respondents in Wave 2 are different and not comparable to those in later waves, RwRICANY cannot be assigned a value of 0 in Wave 2. These questions are not asked to HRS Wave 2 respondents, and so are assigned special missing .q in Wave 2. Don't know, refused, and other missing responses are assigned special missing .d, .r, and .m, respectively. RwRICANY is assigned a blank missing (.) if the respondent did not participate in the

current wave. The information used to derive this variable is taken from the respondent-level HRS helper files.

SwRICANY indicates whether the respondent's current wave's spouse receives any care for difficulties with IADLs, and its values are taken from RwRICANY. In addition to the special missing codes employed by RwRICANY, SwRICANY employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

These questions are not asked at all in Wave 1 and for the HRS cohort in Wave 2.

Questions about help with IADL activities are asked differently in the AHEAD cohort in Wave 2 than in other waves. In this wave, respondents are asked whether they are able to do each IADL activity without help, and if not, are asked for the two people who help most often with preparing meals, grocery shopping, making phone calls, and taking medications, and for one person who usually helps manage money if they are not able to manage money without help. In Waves 3 and onward, the respondent is first asked whether they have difficulty with an IADL, and if so, they are asked whether someone helps them with that activity. The coding for the AHEAD cohort in Wave 2 has been adjusted to make the measures as comparable as possible to other waves, but because of the difference in question wording for the AHEAD cohort in Wave 2, RwRICANY cannot be assigned a value of 0 in this wave.

### How Constructed:

RwRICAANY indicates whether the respondent receives any informal care for difficulties with instrumental activities of daily living (IADL). The instrumental activities of daily living include preparing meals, grocery shopping, making phone calls, taking medications, and managing money. In the AHEAD cohort in Wave 2, respondents are asked whether they are able to do each IADL activity without help, and if not, are asked for the two people who help most often with preparing meals, grocery shopping, making phone calls,

and taking medications, and for one person who usually helps manage money if they are not able to manage money without help. In Waves 3 and onward, if the respondent reports having difficulty with an IADL, then they are asked whether someone helps them with that activity. If someone helps with the activity, they are asked for the relationships of up to 6 people who help them with IADLs (preparing meals, grocery shopping, making phone calls, and taking medications), and up to 2 people who help them with managing money. The information used to derive this variable is taken from the respondent-level and helper-level HRS helper files.

For the AHEAD cohort in Wave 2, the following relationships are considered to provide informal care: spouse, child, spouse of child, grandchild, spouse of grandchild, other relative, and other individual. For the AHEAD cohort in Wave 3 and the HRS cohorts in Waves 3 through 5, the following relationships are considered to provide informal care: spouse, child, child-in-law, unlisted child or child-in-law, step/partner child, grandchild, sibling, sibling of spouse, parent or parent-in-law, other relative, and other individual. In Waves 6 and onward, the following relationships are considered to provide informal care: spouse/partner, son, stepson, spouse/partner of daughter, daughter, stepdaughter, spouse/partner of son, grandchild, father, father of spouse/partner, mother, mother of spouse/partner, parents, brother, brother of spouse/partner, sister, sister of spouse/partner, other relative, other individual, former spouse, unlisted child or child-in-law, former step-child, former child-in-law, relationship unknown, and spouse/partner of grandchild.

RwRICAANY is assigned a value of 0 if the respondent has difficulty with at least one IADL but receives no help with the activity from an informal caregiver or does not receive any help at all. RwRICAANY is assigned a value of 1 if the respondent has difficulty with at least one IADL and an informal caregiver helps with at least one of the activities. RwRICAANY is assigned special missing .x if the respondent has no difficulty with any IADLs. These questions are not asked for the HRS cohort in Wave 2, so RwRICAANY is assigned special missing .q in this wave. Don't know, refused, and other missing responses are assigned special missing .d, .r, and .m, respectively. RwRICAANY is assigned a blank missing (.) if the respondent did not participate in the current wave.

SwRICAANY indicates whether the respondent's current wave's spouse receives any informal care for difficulties with IADLs, and its values are taken from RwRICAANY. In addition to the special missing codes employed by RwRICAANY, SwRICAANY employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

These questions are not asked at all in Wave 1 and for the HRS cohort in Wave 2.

In the AHEAD cohort in Wave 2, respondents are asked whether they are able to do each IADL activity without help, and if not, are asked for the two people who help most often with preparing meals, grocery shopping, making phone calls, and taking medications, and for one person who usually helps manage money if they are not able to manage money without help.

In Waves 3 and onward, if the respondent reports having difficulty with an IADL, then they are asked whether someone helps them with that activity. If someone helps with the activity, they are asked for the relationships of up to 6 people who help them with IADLs (preparing meals, grocery shopping, making phone calls, and taking medications), and up to 2 people who help them with managing money.

The options for type of relationship change slightly between the AHEAD cohort in Wave 2, Waves 3 through 5, and Waves 6 and onward, but these categories have been combined to keep the definitions as similar as possible between waves for RwRICAANY.

### How Constructed:

The following variables indicate whether the respondent's spouse helps the respondent with any IADL needs. The instrumental activities of daily living include preparing meals, grocery shopping, making phone calls, taking medications, and managing money. In the AHEAD cohort in Wave 2, respondents are asked whether they are able to do each IADL activity without help, and if not, are asked for the two people who help most often with preparing meals, grocery shopping, making phone calls, and taking medications, and for one person who usually helps manage money if they are not able to manage money without help. In Waves 3 and onward, if the respondent reports having difficulty with an IADL, then they are asked whether someone helps them with that activity. If someone helps with the activity, they are asked for the relationships of up to 6 people who help them with IADLs (preparing meals, grocery shopping, making phone calls, and taking medications), and up to 2 people who help them with managing money. The respondent is asked whether each reported helper is paid, unless that helper is the respondent's spouse or an employee of an institution. The information used to derive these variables is taken from the respondent-level and helper-level HRS helper files.

The following variables are coded as special missing .x if the respondent reports no difficulty with any IADL, and are coded as special missing .h if the respondent reports difficulty with an IADL but does not receive any help. Don't know, refused, or otherwise missing responses are assigned special missing values .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not participate in the current wave.

RwRISCARE, RwRISCAREN, RwRISCAREDPM, RwRISCAREDPMM, RwRISCAREHR, and RwRISCAREHRM include help from the current spouse/partner of the respondent in Waves 2 through 5, and the current or former spouse/partner of the respondent in Wave 6 and onward.

RwRISCARE indicates whether the respondent's spouse or former spouse helps the respondent with any IADL needs. RwRISCAREN indicates the number of the respondent's spouses or former spouses who help the respondent with IADL needs. RwRISCARE is coded as 0 if the respondent receives no assistance from their spouse, and coded as 1 if the respondent does receive help from their spouse. In Wave 2, RwRISCARE and RwRISCAREN are assigned special missing .q if the respondent participated in the HRS cohort in Wave 2. RwRISCARE is not available in Wave 1 and RwRISCAREN is not available in Waves 1, 3, and 4.

RwRISCAREDPM indicates the number of total days per month the respondent's spouse or former spouse helps the respondent with IADL needs. This variable comprises converted responses reported in terms of 'Days in last month', 'Days per week', and 'Everyday'. Respondents were allowed to report the amount of time each helper assists in one of the three mentioned frequencies. RwRISCAREDPM is the sum of days per month for all spouse or former spouse helpers, and so values can be over 31 days. RwRISCAREDPM is calculated as long as there is one non-missing value. RwRISCAREDPMM indicates the number of spouses or former spouses who helped the respondent for whom no value of days was reported and was not accounted for in RwRISCAREDPM. RwRISCAREDPMM is assigned special missing .m if the respondent's spouse or former spouse do not help the respondent or prior information was missing. RwRISCAREDPM and RwRISCAREDPMM are not available in Waves 1 through 4.

RwRISCAREHR indicates the number of total hours per day the respondent's spouse or former spouse helps the respondent with any IADL needs. Respondents are asked, on days their spouse helps with a particular IADL need, how many hours per day their spouse helps. If the respondent reports less than an hour, then a 1 is recorded. RwRISCAREHR is the sum of hours per day for all spouse or former spouse helpers, and so values can be over 24 hours. RwRISCAREHR is calculated as long as there is one non-missing value. RwRISCAREHRM indicates the number of spouses or former spouses who helped the respondent for whom no value of hours was reported and was not accounted for in RwRISCAREHR. RwRISCAREHRM is assigned special missing .m if the respondent was not helped by any spouse or former spouses or prior information was missing. If the respondent participated in the HRS cohort in Wave 2, then RwRISCAREHR and RwRISCAREHRM are assigned special missing .q in Wave 2. RwRISCAREHR and RwRISCAREHRM are not available in Waves 1, 3, and 4.

SwRISCARE, SwRISCAREN, SwRISCAREDPM, and SwRISCAREHR indicate whether, the number, and the frequency with which the respondent's current wave's spouse receives help from the respondent or their former spouse, and their values are taken from RwRISCARE, RwRISCAREN, RwRISCAREDPM, and RwRISCAREHR. SwRISCAREDPMM and SwRISCAREHRM indicate whether or not a value was reported for the number of days and hours the respondent's current spouse was helped by the respondent or their former spouse and are taken from RwRISCAREDPMM and RwRISCAREHRM. In addition to the special missing codes employed by the respondent variables, the spouse variables employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v

is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Respondents are not asked who helps them with IADLs at all in Wave 1 and for the HRS cohort in Wave 2. All variables listed above are not available in Wave 1.

In Wave 2 for those in the AHEAD cohort, respondents are asked whether they are able to do each IADL activity without help, and if not, are asked for the two people who help most often with preparing meals, grocery shopping, making phone calls, and taking medications, and for one person who usually helps manage money if they are not able to manage money without help. Starting in Wave 3, respondents are asked to report up to 6 people who help with preparing meals, grocery shopping, making phone calls, and taking medication, and up to 2 people who help with managing money.

Respondents are asked who helps them with IADLs starting in the AHEAD cohorts in Wave 2 and Wave 3. As such, RWRISCARE is available starting in the AHEAD cohorts in Wave 2 and Wave 3. Additionally, RWRISCAREN is available for the AHEAD cohort in Wave 2. If the respondent participated in the HRS cohort in Wave 2, then these variables are assigned special missing .q in Wave 2 because they were not asked this question.

In the AHEAD and HRS cohorts in Wave 3 and Wave 4, respondents can report that their current spouse helps them with IADLs. However, respondents are not asked about the number of days or number of hours that the respondent's spouse helps the respondent in these waves. As such, RWRISCAREN, RWRISCAREDPM, RWRISCAREDPMM, RWRISCAREHR, and RWRISCAREHRM are not available in Waves 3 and 4.

Starting in Wave 5, respondents are asked who helps them with IADLs, and are asked about the number of days and number of hours that the respondent's spouse helps the respondent. As such, RWRISCAREN, RWRISCAREDPM, RWRISCAREDPMM, RWRISCAREHR, and RWRISCAREHRM are available beginning in Wave 5.

## How Constructed:

The following variables indicate whether the respondent's children or grandchildren help the respondent with any IADL needs. The instrumental activities of daily living include preparing meals, grocery shopping, making phone calls, taking medications, and managing money. In the AHEAD cohort in Wave 2, respondents are asked whether they are able to do each IADL activity without help, and if not, are asked for the two people who help most often with preparing meals, grocery shopping, making phone calls, and taking medications, and for one person who usually helps manage money if they are not able to manage money without help. In Waves 3 and onward, if the respondent reports having difficulty with an IADL, then they are asked whether someone helps them with that activity. If someone helps with the activity, they are asked for the relationships of up to 6 people who help them with IADLs (preparing meals, grocery shopping, making phone calls, and taking medications), and up to 2 people who help them with managing money. The respondent is asked whether each reported helper is paid, unless that helper is the respondent's spouse or an employee of an institution. The information used to derive these variables is taken from the respondent-level and helper-level HRS helper files.

The following variables are coded as special missing .x if the respondent reports no difficulty with any IADL, and are coded as special missing .h if the respondent reports difficulty with an IADL but does not receive any help. Don't know, refused, or otherwise missing responses are assigned special missing values .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not participate in the current wave.

RwRICCARE, RwRICCAREN, RwRICCAREDP, RwRICCAREDPMM, RwRICCAREHR, RwRICCAREHRM, and RwRICCAREPD include help from the respondent's child, spouse of child, grandchild, and spouse of grandchild in the AHEAD cohort in Wave 2. These variables include help from the respondent's child, child-in-law, unlisted child or child-in-law, step/partner child, and grandchild in Waves 3 through 5. These variables include help from the respondent's sons, step-sons, spouse/partner of daughters, son-in-laws, daughters, step-daughters, spouse/partner of sons, daughter-in-laws, grandchildren, unlisted children or children-in-law, former step-children, former children-in-law, spouse/partner of grandchildren, ambiguous child relation, and ambiguous child-in-law relation in Waves 6 and onward.

RwRICCARE indicates whether any of the respondent's children or grandchildren help the respondent with IADL needs. RwRICCAREN indicates the number of the respondent's children or grandchildren who help the respondent with IADL needs. RwRICCARE is coded as 0 if none of the respondent's children or grandchildren help the respondent with IADLs, and is coded as 1 if at least one of the respondent's children or grandchildren help the respondent with IADLs. In Wave 2, RwRICCARE and RwRICCAREN are assigned special missing .q if the respondent participated in the HRS cohort in Wave 2. RwRICCARE and RwRICCAREN are not available in Wave 1.

RwRICCAREDPM indicates the number of total days per month the respondent's children or grandchildren help the respondent with IADL needs. This variable comprises converted responses reported in terms of 'Days in last month', 'Days per week', and 'Everyday'. Respondents were allowed to report the amount of time each helper assists in one of the three mentioned frequencies. RwRICCAREDPM is the sum of days per month for all children or grandchildren helpers, and so values can be over 31 days. RwRICCAREDPM is calculated as long as there is one non-missing value. RwRICCAREDPMM indicates the number of children or grandchildren who helped the respondent for whom no value of days was reported and was not accounted for in RwRICCAREDPM. RwRICCAREDPMM is assigned special missing .m if the respondent was not helped by any children or grandchildren or prior information was missing. RwRICCAREDPM and RwRICCAREDPMM are not available in Waves 1 and 2.

RwRICCAREHR indicates the number of hours per day the respondent's children or grandchildren help the respondent with IADL needs. Respondents are asked, on days their children or grandchildren help, how many hours per day that is. If the respondent reports less than an hour, then a 1 is recorded. RwRICCAREHR is the sum of hours per day for all children or grandchildren helpers, and so values can be over 24 hours. RwRICCAREHR is calculated as long as there is one non-missing value. RwRICCAREHRM indicates the number of children or grandchildren who helped the respondent for whom no value of hours was reported and was not accounted for in RwRICCAREHR. RwRICCAREHR is assigned a special missing .w in the AHEAD cohort of Wave 2 if this question is not asked because the respondent's children or grandchildren help less than once per week. RwRICCAREHRM is assigned special missing .m if the respondent was not helped by any children or grandchildren or prior information was missing. In Wave 2, RwRICCAREHR and RwRICCAREHRM are assigned special missing .q if the respondent participated in the HRS cohort in Wave 2. RwRICCAREHR and RwRICCAREHRM are not available in Wave 1.

RwRICCAREPD indicates whether any of the respondent's children or grandchildren helpers are paid for the care given to the respondent for IADL needs. RwRICCAREPD is assigned a value of 0 if the respondent receives no care from children or grandchildren, or the respondent does receive care from children or grandchildren and none of them are paid. RwRICCAREPD is assigned a value of 1 if the respondent receives care from children or grandchildren and at least one of them is paid for the care given to the respondent. RwRICCAREPD is assigned a special missing .w in the AHEAD cohort of Wave 2 if this question is not asked because the respondent's children or grandchildren help less than once per week. In Wave 2, RwRICCAREPD is assigned special missing .q if the respondent participated in the HRS cohort in Wave 2. RwRICCAREPD is not available in Wave 1.

SwRICCARE, SwRICCAREN, SwRICCAREDPM, SwRICCAREHR, and SwRICCAREPD indicate whether the respondent's current wave's spouse receives help from children or grandchildren, the number, the frequency with which, and whether any are paid, and their values are taken from RwRICCARE, RwRICCAREN, RwRICCAREDPM, RwRICCAREHR, and RwRICCAREPD. SwRICCAREDPMM and SwRICCAREHRM indicate the number of children who helped the respondent's current spouse for whom a value was not reported for the number of days and hours and are taken from RwRICCAREDPMM and RwRICCAREHRM. In addition to the special missing codes employed by the respondent variables, the spouse variables employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Respondents are not asked who helps them with IADLS at all in Wave 1 and for the HRS cohort in Wave 2. All variables listed above are not available in Wave 1.

In Wave 2 for those in the AHEAD cohort, respondents are asked whether they are able to do each IADL activity without help, and if not, are asked for the two people who help most often with preparing meals, grocery shopping, making phone calls, and taking medications, and for one person who usually helps manage money if they are not able to manage money without help. Starting in Wave 3, respondents are asked to report up to 6 people who help with preparing meals, grocery shopping, making phone calls, and taking medication, and up to 2 people who help with managing money.

Respondents are asked who helps them with IADLS, and whether they are paid starting in the AHEAD cohorts in Wave 2 and Wave 3. As such, RwRICCARE, RwRICCAREN, and RwRICCAREPD are available starting in the AHEAD cohorts in Wave 2 and Wave 3. If the respondent participated in the HRS cohort in Wave 2, then RwRICCARE, RwRICCAREN, and RwRICCAREPD are assigned special missing .q in Wave 2 because they were not asked these questions.

In the AHEAD cohort in Wave 2, respondents can report that a child or grandchild helps them with IADLs, and were asked how frequently and the number of hours that the child or grandchild provides help. However, the frequency of help is not comparable to other waves and so RWRICCAREDPM and RWRICCAREDPMM are not available in the AHEAD cohort in Wave 2. The number of hours that the child or grandchild helps is comparable, and so RWRICCAREHR and RWRICCAREHRM are available in this wave. If the respondent participated in the HRS cohort in Wave 2, then RWRICCAREHR and RWRICCAREHRM are assigned special missing .q in Wave 2 because they were not asked this question.

Starting in Wave 3, respondents are asked who helps them with IADLs, and are asked about the number of days and number of hours that the respondent's child or grandchild helps the respondent. As such, RWRICCAREDPM and RWRICCAREDPMM are available beginning in Wave 3.

In the AHEAD cohort in Wave 2, respondents are not asked whether the helper is paid if they help less than once per week. Starting in Wave 3, respondents are asked whether the helper is paid regardless of the frequency of the help.

## How Constructed:

The following variables indicate whether any of the respondent's relatives help the respondent with any IADL needs. The instrumental activities of daily living include preparing meals, grocery shopping, making phone calls, taking medications, and managing money. In the AHEAD cohort in Wave 2, respondents are asked whether they are able to do each IADL activity without help, and if not, are asked for the two people who help most often with preparing meals, grocery shopping, making phone calls, and taking medications, and for one person who usually helps manage money if they are not able to manage money without help. In Waves 3 and onward, if the respondent reports having difficulty with an IADL, then they are asked whether someone helps them with that activity. If someone helps with the activity, they are asked for the relationships of up to 6 people who help them with IADLs (preparing meals, grocery shopping, making phone calls, and taking medications), and up to 2 people who help them with managing money. The respondent is asked whether each reported helper is paid, unless that helper is the respondent's spouse or an employee of an institution. The information used to derive these variables is taken from the respondent-level and helper-level HRS helper files.

The following variables are coded as special missing .x if the respondent reports no difficulty with any IADL, and are coded as special missing .h if the respondent reports difficulty with an IADL but does not receive any help. Don't know, refused, or otherwise missing responses are assigned special missing values .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not participate in the current wave.

RwRIRCARE, RwRIRCAREN, RwRIRCAREDPM, RwRIRCAREDPMM, RwRIRCAREHR, RwRIRCAREHRM, and RwRIRCAREPD include help from the respondent's other relative in the AHEAD cohort in Wave 2. These variables include help from the respondent's sibling, sibling of spouse, parent or parent-in-law, and other relative in Waves 3 through 5. These variables include help from the respondent's father, father of spouse/partner, mother, mother of spouse/partner, parents, brother, brother of spouse/partner, sister, sister of spouse/partner, or other relative in Waves 6 and onward.

RwRIRCARE indicates whether any of the respondent's relatives help the respondent with IADL needs. RwRIRCAREN indicates the number of the respondent's relatives who help the respondent with IADL needs. RwRIRCARE is coded as 0 if none of the respondent's relatives help the respondent with IADLS, and is coded as 1 if at least one of the respondent's relatives help the respondent with IADLs. In Wave 2, RwRIRCARE and RwRIRCAREN are assigned special missing .q if the respondent participated in the HRS cohort in Wave 2. RwRIRCARE and RwRIRCAREN are not available in Wave 1.

RwRIRCAREDPM indicates the number of total days per month the respondent's relatives help the respondent with IADL needs. This variable comprises converted responses reported in terms of 'Days in last month', 'Days per week', and 'Everyday'. Respondents were allowed to report the amount of time each helper

assists in one of the three mentioned frequencies. RWRIRCAREDPM is the sum of days per month for all relative helpers, and so values can be over 31 days. RWRIRCAREDPM is calculated as long as there is one non-missing value. RWRIRCAREDPMM indicates the number of relatives who helped the respondent for whom no value of days was reported and was not accounted for in RWRIRCAREDPM. RWRIRCAREDPMM is assigned special missing .m if the respondent was not helped by any relatives or prior information was missing. RWRIRCAREDPM and RWRIRCAREDPMM are not available in Waves 1 and 2.

RWRIRCAREHR indicates the number of hours per day the respondent's relatives help the respondent with IADL needs. Respondents are asked, on days their relatives help, how many hours per day that is. If the respondent reports less than an hour, then a 1 is recorded. RWRIRCAREHR is the sum of hours per day for all relative helpers, and so values can be over 24 hours. RWRIRCAREHR is calculated as long as there is one non-missing value. RWRIRCAREHRM indicates the number of relatives who helped the respondent for whom no value of hours was reported and was not accounted for in RWRIRCAREHR. RWRIRCAREHR is assigned a special missing .w in the AHEAD cohort of Wave 2 if this question is not asked because the respondent's relatives help less than once per week. RWRIRCAREHRM is assigned special missing .m if the respondent was not helped by any relatives or prior information was missing. In Wave 2, RWRIRCAREHR and RWRIRCAREHRM are assigned special missing .q if the respondent participated in the HRS cohort in Wave 2. RWRIRCAREHR and RWRIRCAREHRM are not available in Wave 1.

RWRIRCAREPD indicates whether any of the respondent's relative helpers are paid for the care given to the respondent for IADL needs. RWRIRCAREPD is assigned a value of 0 if the respondent receives no care from relatives, or the respondent does receive care from relatives and none of them are paid. RWRIRCAREPD is assigned a value of 1 if the respondent receives care from relatives and at least one of them is paid for the care given to the respondent. RWRIRCAREPD is assigned a special missing .w in the AHEAD cohort of Wave 2 if this question is not asked because the respondent's relatives help less than once per week. In Wave 2, RWRIRCAREPD is assigned special missing .q if the respondent participated in the HRS cohort in Wave 2. RWRIRCAREPD is not available in Wave 1.

SWRIRCARE, SWRIRCAREN, SWRIRCAREDPM, SWRIRCAREHR, and SWRIRCAREPD indicate whether the respondent's current wave's spouse receives help from relatives, the number, the frequency with which, and whether any are paid, and their values are taken from RWRIRCARE, RWRIRCAREN, RWRIRCAREDPM, RWRIRCAREHR, and RWRIRCAREPD. SWRIRCAREDPMM and SWRIRCAREHRM indicate the number of relatives who helped the respondent's current spouse for whom a value was not reported for the number of days and hours and are taken from RWRIRCAREDPMM and RWRIRCAREHRM. In addition to the special missing codes employed by the respondent variables, the spouse variables employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Respondents are not asked who helps them with IADLS at all in Wave 1 and in the HRS cohort in Wave 2. All variables listed above are not available in Wave 1.

In Wave 2 for those in the AHEAD cohort, respondents are asked whether they are able to do each IADL activity without help, and if not, are asked for the two people who help most often with preparing meals, grocery shopping, making phone calls, and taking medications, and for one person who usually helps manage money if they are not able to manage money without help. Starting in Wave 3, respondents are asked to report up to 6 people who help with preparing meals, grocery shopping, making phone calls, and taking medication, and up to 2 people who help with managing money.

Respondents are asked who helps them with IADLS, and whether they are paid starting in the AHEAD cohorts in Wave 2 and Wave 3. As such, RWRIRCARE, RWRIRCAREN, and RWRIRCAREPD are available starting in the AHEAD cohorts in Wave 2 and Wave 3. If the respondent participated in the HRS cohort in Wave 2, then RWRIRCARE, RWRIRCAREN, and RWRIRCAREPD are assigned special missing .q in Wave 2 because they were not asked these questions.

In the AHEAD cohort in Wave 2, respondents can report that a relative helps them with IADLs, and were asked how frequently and the number of hours that the relative provides help. However, the frequency of help is not comparable to other waves and so RWRIRCAREDPM and RWRIRCAREDPMM are not available in this wave. The number of hours that the relative helps is comparable, and so RWRIRCAREHR and RWRIRCAREHRM are available in this wave. If the respondent participated in the HRS cohort in Wave 2, then RWRIRCAREHR and RWRIRCAREHRM are assigned special missing .q in Wave 2 because they were not asked this question.

Starting in Wave 3, respondents are asked who helps them with IADLs, and are asked about the number of days or number of hours that the respondent's relative helps the respondent. As such, RwRIRCAREDPM and RwRIRCAREDPMM are available beginning in Wave 3.

In the AHEAD cohort in Wave 2, respondents are not asked whether the helper is paid if they help less than once per week. Starting in Wave 3, respondents are asked whether the helper is paid regardless of the frequency of the help.

## How Constructed:

The following variables indicate whether any non-relative helps the respondent with any IADL needs. The instrumental activities of daily living include preparing meals, grocery shopping, making phone calls, taking medications, and managing money. In the AHEAD cohort in Wave 2, respondents are asked whether they are able to do each IADL activity without help, and if not, are asked for the two people who help most often with preparing meals, grocery shopping, making phone calls, and taking medications, and for one person who usually helps manage money if they are not able to manage money without help. In Waves 3 and onward, if the respondent reports having difficulty with an IADL, then they are asked whether someone helps them with that activity. If someone helps with the activity, they are asked for the relationships of up to 6 people who help them with IADLs (preparing meals, grocery shopping, making phone calls, and taking medications), and up to 2 people who help them with managing money. The respondent is asked whether each reported helper is paid, unless that helper is the respondent's spouse or an employee of an institution. The information used to derive these variables is taken from the respondent-level and helper-level HRS helper files.

The following variables are coded as special missing .x if the respondent reports no difficulty with any IADL, and are coded as special missing .h if the respondent reports difficulty with an IADL but does not receive any help. Don't know, refused, or otherwise missing responses are assigned special missing values .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not participate in the current wave.

RwRIFCARE, RwRIFCAREN, RwRIFCAREDP, RwRIFCAREDPMM, RwRIFCAREHR, RwRIFCAREHRM, and RwRIFCAREPD include help from other individuals in the AHEAD cohort in Wave 2 and in Waves 3 through 5. These variables include help from other individuals and persons of unknown relationships in Waves 6 and onward.

RwRIFCARE indicates whether any of the respondent's non-relatives help the respondent with IADL needs. RwRIFCAREN indicates the number of the respondent's non-relatives who help the respondent with IADL needs. RwRIFCARE is coded as 0 if none of the respondent's non-relatives help the respondent with IADLs, and is coded as 1 if at least one of the respondent's non-relatives help the respondent with IADLs. In Wave 2, RwRIFCARE and RwRIFCAREN are assigned special missing .q if the respondent participated in the HRS cohort in Wave 2. RwRIFCARE and RwRIFCAREN are not available in Wave 1.

RwRIFCAREDP indicates the number of total days per month the respondent's non-relatives help the respondent with IADL needs. This variable comprises converted responses reported in terms of 'Days in last month', 'Days per week', and 'Everyday'. Respondents were allowed to report the amount of time each helper assists in one of the three mentioned frequencies. RwRIFCAREDP is the sum of days per month for all non-relative helpers, and so values can be over 31 days. RwRIFCAREDP is calculated as long as there is one non-missing value. RwRIFCAREDPMM indicates the number of non-relatives who helped the respondent

for whom no value of days was reported and was not accounted for in RwRIFCAREDPM. RwRIFCAREDPMM is assigned special missing .m if the respondent was not helped by any non-relatives or prior information was missing. RwRIFCAREDPM and RwRIFCAREDPMM are not available in Waves 1 and 2.

RwRIFCAREHR indicates the number of hours per day the respondent's non-relatives help the respondent with IADL needs. Respondents are asked, on days their non-relatives help, how many hours per day that is. If the respondent reports less than an hour, then a 1 is recorded. RwRIFCAREHR is the sum of hours per day for all non-relative helpers, and so values can be over 24 hours. RwRIFCAREHR is calculated as long as there is one non-missing value. RwRIFCAREHRM indicates the number of non-relatives who helped the respondent for whom no value of hours was reported and was not accounted for in RwRIFCAREHR. RwRIFCAREHR is assigned a special missing .w in the AHEAD cohort in Wave 2 if this question is not asked because the respondent's non-relative helpers help less than once per week. RwRIFCAREHRM is assigned special missing .m if the respondent was not helped by any non-relatives or prior information was missing. In Wave 2, RwRIFCAREHR and RwRIFCAREHRM are assigned special missing .q if the respondent participated in the HRS cohort in Wave 2. RwRIFCAREHR and RwRIFCAREHRM are not available in Wave 1.

RwRIFCAREPD indicates whether any of the respondent's non-relative helpers are paid for the care given to the respondent for IADL needs. RwRIFCAREPD is assigned a value of 0 if the respondent receives no care from non-relatives, or the respondent does receive care from non-relatives and none of them are paid. RwRIFCAREPD is assigned a value of 1 if the respondent receives care from non-relatives and at least one of them is paid for the care given to the respondent. RwRIFCAREPD is assigned a special missing .w in the AHEAD cohort in Wave 2 if this question is not asked because the respondent's non-relative helpers help less than once per week. In Wave 2, RwRIFCAREPD is assigned special missing .q if the respondent participated in the HRS cohort in Wave 2. RwRIFCAREPD is not available in Wave 1.

SwRIFCARE, SwRIFCAREN, SwRIFCAREDPM, SwRIFCAREHR, and SwRIFCAREPD indicate whether the respondent's current wave's spouse receives help from non-relatives, the number, the frequency with which, and whether any are paid, and their values are taken from RwRIFCARE, RwRIFCAREN, RwRIFCAREDPM, RwRIFCAREHR, and RwRIFCAREPD. SwRIFCAREDPMM and SwRIFCAREHRM indicate the number of non-relatives who helped the respondent's current spouse for whom a value was not reported for the number of days and hours and are taken from RwRIFCAREDPMM and RwRIFCAREHRM. In addition to the special missing codes employed by the respondent variables, the spouse variables employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Respondents are not asked who helps them with IADLS at all in Wave 1 and in the HRS cohort in Wave 2. All variables listed above are not available in Wave 1.

In Wave 2 for those in the AHEAD cohort, respondents are asked whether they are able to do each IADL activity without help, and if not, are asked for the two people who help most often with preparing meals, grocery shopping, making phone calls, and taking medications, and for one person who usually helps manage money if they are not able to manage money without help. Starting in Wave 3, respondents are asked to report up to 6 people who help with preparing meals, grocery shopping, making phone calls, and taking medication, and up to 2 people who help with managing money.

Respondents are asked who helps them with IADLS, and whether they are paid starting in the AHEAD cohorts in Wave 2 and Wave 3. As such, RwRIFCARE, RwRIFCAREN, and RwRIFCAREPD are available starting in the AHEAD cohorts in Wave 2 and Wave 3. If the respondent participated in the HRS cohort in Wave 2, then RwRIFCARE, RwRIFCAREN, RwRIFCAREPD are assigned special missing .q in Wave 2 because they were not asked these questions.

In the AHEAD cohort in Wave 2, respondents can report that a non-relative helps them with IADLS, and were asked how frequently and the number of hours that the non-relative provides help. However, the frequency of help is not comparable to other waves and so RwRIFCAREDPM and RwRIFCAREDPMM are not available in this wave. The number of hours that the non-relative helps is comparable, and so RwRIFCAREHR and RwRIFCAREHRM are available in this wave. If the respondent participated in the HRS cohort in Wave 2, then RwRIFCAREHR and RwRIFCAREHRM are assigned special missing .q in Wave 2 because they were not asked this question.

Starting in Wave 3, respondents are asked who helps them with IADLs, and are asked about the number of days or number of hours that the respondent's non-relative helps the respondent. As such, RWRIFCAREDPMM and RWRIFCAREDPMM are available beginning in Wave 3.

In the AHEAD cohort in Wave 2, respondents are not asked whether the helper is paid if they help less than once per week. Starting in Wave 3, respondents are asked whether the helper is paid regardless of the frequency of the help.

### How Constructed:

RwRIFAANY indicates whether the respondent receives any formal care for difficulties with instrumental activities of daily living (IADL). The instrumental activities of daily living include preparing meals, grocery shopping, making phone calls, taking medications, and managing money. In the AHEAD cohort in Wave 2, respondents are asked whether they are able to do each IADL activity without help, and if not, are asked for the two people who help most often with preparing meals, grocery shopping, making phone calls,

and taking medications, and for one person who usually helps manage money if they are not able to manage money without help. In Waves 3 and onward, if the respondent reports having difficulty with an IADL, then they are asked whether someone helps them with that activity. If someone helps with the activity, they are asked for the relationships of up to 6 people who help them with IADLs (preparing meals, grocery shopping, making phone calls, and taking medications), and up to 2 people who help them with managing money. The information used to derive this variable is taken from the respondent-level and helper-level HRS helper files.

For the AHEAD cohort in Wave 2, the following relationship is considered to provide formal care: organization/agency. In Waves 3 through 5, the following relationships are considered to provide formal care: professional, employee of institution, and organization. In Waves 6 and onward, the following relationships are considered to provide formal care: organization, employee of institution, paid helper, professional, and specified professional.

RwRIFAANY is assigned a value of 0 if the respondent has difficulty with at least one IADL but receives no help with the activity from a formal caregiver or does not receive any help at all. RwRIFAANY is assigned a value of 1 if the respondent has difficulty with at least one IADL and a formal caregiver helps with at least one of the activities. RwRIFAANY is assigned special missing .x if the respondent has no difficulty with any IADLs. These questions are not asked for the HRS cohort in Wave 2, so RwRIFAANY is assigned special missing .q in this wave. Don't know, refused, and other missing responses are assigned special missing .d, .r, and .m, respectively. RwRIFAANY is assigned a blank missing (.) if the respondent did not participate in the current wave.

SwRIFAANY indicates whether the respondent's current wave's spouse receives any formal care for difficulties with IADLs, and its values are taken from RwRIFAANY. In addition to the special missing codes employed by RwRIFAANY, SwRIFAANY employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

These questions are not asked at all in Wave 1 and for the HRS cohort in Wave 2.

In the AHEAD cohort in Wave 2, respondents are asked whether they are able to do each IADL activity without help, and if not, are asked for the two people who help most often with preparing meals, grocery shopping, making phone calls, and taking medications, and for one person who usually helps manage money if they are not able to manage money without help.

In Waves 3 and onward, if the respondent reports having difficulty with an IADL, then they are asked whether someone helps them with that activity. If someone helps with the activity, they are asked for the relationships of up to 6 people who help them with IADLs (preparing meals, grocery shopping, making phone calls, and taking medications), and up to 2 people who help them with managing money.

The options for type of relationship change slightly between the AHEAD cohort in Wave 2, Waves 3 through 5, and Waves 6 and onward, but these categories have been combined to keep the definitions as similar as possible between waves for RwRIFAANY.

## How Constructed:

The following variables indicate whether paid formal caregivers help the respondent with any IADL needs. The instrumental activities of daily living include preparing meals, grocery shopping, making phone calls, taking medications, and managing money. In the AHEAD cohort in Wave 2, respondents are asked whether they are able to do each IADL activity without help, and if not, are asked for the two people who help most often with preparing meals, grocery shopping, making phone calls, and taking medications, and for one person who usually helps manage money if they are not able to manage money without help. In Waves 3 and onward, if the respondent reports having difficulty with an IADL, then they are asked whether someone helps them with that activity. If someone helps with the activity, they are asked for the relationships of up to 6 people who help them with IADLs (preparing meals, grocery shopping, making phone calls, and taking medications), and up to 2 people who help them with managing money. The respondent is asked whether each reported helper is paid, unless that helper is the respondent's spouse or an employee of an institution. The information used to derive these variables is taken from the respondent-level and helper-level HRS helper files.

The following variables are coded as special missing .x if the respondent reports no difficulty with any IADL, and are coded as special missing .h if the respondent reports difficulty with an IADL but does not receive any help. Don't know, refused, or otherwise missing responses are assigned special missing values .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not participate in the current wave.

RwRIPFCARE, RwRIPFCAREN, RwRIPFCAREDP, RwRIPFCAREDPMM, RwRIPFCAREHR, and RwRIPFCAREHRM include help from an organization/agency if they are reported to be paid for the AHEAD cohort in Wave 2. These variables include help from a professional, employee of institution, and organization if they are reported to be

paid in Waves 3 through 5. These variables include help from organizations, paid helpers, professionals, or specified professionals if they are reported to be paid in Wave 6 and onward. These variables also include help from employees of institutions, who are assumed to be paid but are not explicitly asked about in Waves 6 and onward.

RwRIPFCARE indicates whether any paid professionals help the respondent with IADL needs. RwRIPFCAREN indicates the number of paid professionals who help the respondent with IADL needs. RwRIPFCARE is coded as 0 if no paid professionals help the respondent with IADLS, and is coded as 1 if at least one paid professional helps the respondent with IADLS. In Wave 2, RwRIPFCARE and RwRIPFCAREN are assigned special missing .q if the respondent participated in the HRS cohort in Wave 2. RwRIPFCARE and RwRIPFCAREN are not available in Wave 1.

RwRIPFCAREDPM indicates the number of total days per month paid professionals help the respondent with IADL needs. This variable comprises converted responses reported in terms of 'Days in last month', 'Days per week', and 'Everyday'. Respondents were allowed to report the amount of time each helper assists in one of the three mentioned frequencies. RwRIPFCAREDPM is the sum of days per month for all paid professional helpers, and so values can be over 31 days. RwRIPFCAREDPM is calculated as long as there is one non-missing value. If the respondent's only paid professional helper is an employee of an institution, then the respondent is not asked how many days the respondent receives help, and RwRIPFCAREDPM is assigned special missing .e starting in Wave 6. RwRIPFCAREDPMM indicates the number of paid professionals who helped the respondent for whom no value of days was reported and was not accounted for in RwRIPFCAREDPM, including if the respondent is helped by an employee of an institution. RwRIPFCAREDPMM is assigned special missing .m if the respondent was not helped by any paid professionals or prior information was missing. RwRIPFCAREDPM and RwRIPFCAREDPMM are not available in Waves 1 and 2.

RwRIPFCAREHR indicates the number of hours per day paid professionals help the respondent with IADL needs. Respondents are asked, on days paid professionals help, how many hours per day that is. If the respondent reports less than an hour, then a 1 is recorded. RwRIPFCAREHR is the sum of hours per day for all paid professional helpers, and so values can be over 24 hours. RwRIPFCAREHR is calculated as long as there is one non-missing value. If the respondent's only paid professional helper is an employee of an institution, then the respondent is not asked how many hours the respondent receives help, and RwRIPFCAREHR is assigned special missing .e starting in Wave 6. RwRIPFCAREHRM indicates the number of paid professionals who helped the respondent for whom no value of hours was reported and was not accounted for in RwRIPFCAREHR, including if the respondent is helped by an employee of an institution. RwRIPFCAREHRM is assigned special missing .m if the respondent was not helped by any paid professionals or prior information was missing. In Wave 2, RwRIPFCAREHR and RwRIPFCAREHRM are assigned special missing .q if the respondent participated in the HRS cohort in Wave 2. RwRIPFCAREHR and RwRIPFCAREHRM are not available in Wave 1.

SwRIPFCARE, SwRIPFCAREN, SwRIPFCAREDPM, and SwRIPFCAREHR indicate whether the respondent's current wave's spouse receives help from paid professionals, the number, and the frequency with which, and their values are taken from RwRIPFCARE, RwRIPFCAREN, RwRIPFCAREDPM, and RwRIPFCAREHR. SwRIPFCAREDPMM and SwRIPFCAREHRM indicate the number of paid professionals who helped the respondent's current spouse for whom a value was not reported for the number of days and hours and are taken from RwRIPFCAREDPMM and RwRIPFCAREHRM. In addition to the special missing codes employed by the respondent variables, the spouse variables employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Respondents are not asked who helps them with IADLS at all in Wave 1 and for the HRS cohort in Wave 2. All variables listed above are not available in Wave 1.

In Wave 2 for those in the AHEAD cohort, respondents are asked whether they are able to do each IADL activity without help, and if not, are asked for the two people who help most often with preparing meals, grocery shopping, making phone calls, and taking medications, and for one person who usually helps manage money if they are not able to manage money without help. Starting in Wave 3, respondents are asked to report up to 6 people who help with preparing meals, grocery shopping, making phone calls, and taking medication, and up to 2 people who help with managing money.

Respondents are asked who helps them with IADLS, and whether they are paid starting in the AHEAD cohorts in Wave 2 and Wave 3. As such, RwRIPFCARE and RwRIPFCAREN are available starting in the AHEAD cohorts in

Wave 2 and Wave 3. If the respondent participated in the HRS cohort in Wave 2, then RwRIPFCARE and RwRIPFCAREN are assigned special missing .q in Wave 2 because they were not asked these questions.

In the AHEAD cohort in Wave 2, respondents can report that a paid professional helps them with IADLs, and were asked how frequently and the number of hours that the paid professional provides help. However, the frequency of help is not comparable to other waves and so RwRIPFCAREDPM and RwRIPFCAREDPMM are not available in this wave. The number of hours that the paid professional helps is comparable, and so RwRIPFCAREHR and RwRIPFCAREHRM are available in this wave. If the respondent participated in the HRS cohort in Wave 2, then RwRIPFCAREHR and RwRIPFCAREHRM are assigned special missing .q in Wave 2 because they were not asked this question.

Starting in Wave 3, respondents are asked who helps them with IADLs, and are asked about the number of days or number of hours that a paid professional helps the respondent. As such, RwRIPFCAREDPM and RwRIPFCAREDPMM are available beginning in Wave 3.

Starting in Wave 6, if the respondent's helper is an employee of an institution, then the respondent is not asked for the number of days or hours that the respondent receives help from that helper, and RwRIPFCAREDPM and RwRIPFCAREHR are assigned special missing .e if this is the only type of paid professional helper the respondent has.

## How Constructed:

The following variables indicate whether unpaid formal caregivers help the respondent with any IADL needs. The instrumental activities of daily living include preparing meals, grocery shopping, making phone calls, taking medications, and managing money. In the AHEAD cohort in Wave 2, respondents are asked whether they are able to do each IADL activity without help, and if not, are asked for the two people who help most often with preparing meals, grocery shopping, making phone calls, and taking medications, and for one person who usually helps manage money if they are not able to manage money without help. In Waves 3 and onward, if the respondent reports having difficulty with an IADL, then they are asked whether someone helps them with that activity. If someone helps with the activity, they are asked for the relationships of up to 6 people who help them with IADLs (preparing meals, grocery shopping, making phone calls, and taking medications), and up to 2 people who help them with managing money. The respondent is asked whether each reported helper is paid, unless that helper is the respondent's spouse or an employee of an institution. The information used to derive these variables is taken from the respondent-level and helper-level HRS helper files.

The following variables are coded as special missing .x if the respondent reports no difficulty with any IADL, and are coded as special missing .h if the respondent reports difficulty with an IADL but does not receive any help. Don't know, refused, or otherwise missing responses are assigned special missing values .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not participate in the current wave.

RwRIUFCARE, RwRIUFCAREN, RwRIUFCAREDPM, RwRIUFCAREDPMM, RwRIUFCAREHR, and RwRIUFCAREHRM include help from an organization/agency if they are reported to not be paid for the AHEAD cohort in Wave 2. These variables include help from a professional, employee of institution, and organization if they are

reported to not be paid in Waves 3 through 5. These variables include help from organizations, paid helpers, professionals, or specified professionals if they are reported to not be paid in Wave 6 and onward.

RwRIUFCARE indicates whether any unpaid professionals help the respondent with IADL needs. RwRIUFCAREN indicates the number of unpaid professionals who help the respondent with IADL needs. RwRIUFCARE is coded as 0 if no unpaid professionals help the respondent with IADLS, and is coded as 1 if at least one unpaid professional helps the respondent with IADLS. In Wave 2, RwRIUFCARE and RwRIUFCAREN are assigned special missing .q if the respondent participated in the HRS cohort in Wave 2. RwRIUFCARE and RwRIUFCAREN are not available in Wave 1.

RwRIUFCAREDPM indicates the number of total days per month unpaid professionals help the respondent with IADL needs. This variable comprises converted responses reported in terms of 'Days in last month', 'Days per week', and 'Everyday'. Respondents were allowed to report the amount of time each helper assists in one of the three mentioned frequencies. RwRIUFCAREDPM is the sum of days per month for all unpaid professional helpers, and so values can be over 31 days. RwRIUFCAREDPM is calculated as long as there is one non-missing value. RwRIUFCAREDPMM indicates the number of unpaid professionals who helped the respondent for whom no value of days was reported and was not accounted for in RwRIUFCAREDPM. RwRIUFCAREDPMM is assigned special missing .m if the respondent was not helped by any unpaid professionals or prior information was missing. RwRIUFCAREDPM and RwRIUFCAREDPMM are not available in Waves 1 and 2.

RwRIUFCAREHR indicates the number of hours per day unpaid professionals help the respondent with IADL needs. Respondents are asked, on days unpaid professionals help, how many hours per day that is. If the respondent reports less than an hour, then a 1 is recorded. RwRIUFCAREHR is the sum of hours per day for all unpaid professional helpers, and so values can be over 24 hours. RwRIUFCAREHR is calculated as long as there is one non-missing value. RwRIUFCAREHRM indicates the number of unpaid professionals who helped the respondent for whom no value of hours was reported and was not accounted for in RwRIUFCAREHR. RwRIUFCAREHRM is assigned special missing .m if the respondent was not helped by any unpaid professionals or prior information was missing. In Wave 2, RwRIUFCAREHR and RwRIUFCAREHRM are assigned special missing .q if the respondent participated in the HRS cohort in Wave 2. RwRIUFCAREHR and RwRIUFCAREHRM are not available in Wave 1.

SwRIUFCARE, SwRIUFCAREN, SwRIUFCAREDPM, and SwRIUFCAREHR indicate whether the respondent's current wave's spouse receives help from unpaid professionals, the number, and the frequency with which, and their values are taken from RwRIUFCARE, RwRIUFCAREN, RwRIUFCAREDPM, and RwRIUFCAREHR. SwRIUFCAREDPMM and SwRIUFCAREHRM indicate the number of unpaid professionals who helped the respondent's current spouse for whom a value was not reported for the number of days and hours and are taken from RwRIUFCAREDPMM and RwRIUFCAREHRM. In addition to the special missing codes employed by the respondent variables, the spouse variables employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Respondents are not asked who helps them with IADLS at all in Wave 1 and for the HRS cohort in Wave 2. All variables listed above are not available in Wave 1.

In Wave 2 for those in the AHEAD cohort, respondents are asked whether they are able to do each IADL activity without help, and if not, are asked for the two people who help most often with preparing meals, grocery shopping, making phone calls, and taking medications, and for one person who usually helps manage money if they are not able to manage money without help. Starting in Wave 3, respondents are asked to report up to 6 people who help with preparing meals, grocery shopping, making phone calls, and taking medication, and up to 2 people who help with managing money.

Respondents are asked who helps them with IADLS, and whether they are paid starting in the AHEAD cohorts in Wave 2 and Wave 3. As such, RwRIUFCARE and RwRIUFCAREN are available starting in the AHEAD cohorts in Wave 2 and Wave 3. If the respondent participated in the HRS cohort in Wave 2, then RwRIUFCARE and RwRIUFCAREN are assigned special missing .q in Wave 2 because they were not asked these questions.

In the AHEAD cohort in Wave 2, respondents can report that an unpaid professional helps them with IADLS, and were asked how frequently and the number of hours that the unpaid professional provides help. However, the frequency of help is not comparable to other waves and so RwRIUFCAREDPM and RwRIUFCAREDPMM

are not available in this wave. The number of hours that the unpaid professional helps is comparable, and so RWRUIFCAREHR and RWRUIFCAREHRM are available in this wave. If the respondent participated in the HRS cohort in Wave 2, then RWRUIFCAREHR and RWRUIFCAREHRM are assigned special missing .q in Wave 2 because they were not asked this question.

Starting in Wave 3, respondents are asked who helps them with IADLs, and are asked about the number of days or number of hours that an unpaid professional helps the respondent. As such, RWRUIFCAREDPM and RWRUIFCAREDPMM are available beginning in Wave 3.

**How Constructed:**

The following variables indicate whether a paid helper helps the respondent with any IADL needs. The instrumental activities of daily living include preparing meals, grocery shopping, making phone calls, taking medications, and managing money. In the AHEAD cohort in Wave 2, respondents are asked whether they are able to do each IADL activity without help, and if not, are asked for the two people who help most often with preparing meals, grocery shopping, making phone calls, and taking medications, and for one person who usually helps manage money if they are not able to manage money without help. In Waves 3 and onward, if the respondent reports having difficulty with an IADL, then they are asked whether someone helps them with that activity. If someone helps with the activity, they are asked for the relationships of up to 6 people who help them with IADLs (preparing meals, grocery shopping, making phone calls, and taking medications), and up to 2 people who help them with managing money. The respondent is asked whether each reported helper is paid, unless that helper is the respondent's spouse or an employee of an institution. The information used to derive these variables is taken from the respondent-level and helper-level HRS helper files.

The following variables are coded as special missing .x if the respondent reports no difficulty with any IADL, and are coded as special missing .h if the respondent reports difficulty with an IADL but does not receive any help. They are coded as special missing .s if the respondent's spouse is the only person who helps with IADL difficulties. Don't know, refused, or otherwise missing responses are assigned special missing values .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not participate in the current wave.

RwIHLPPDN indicates the number of helpers who are paid to help the respondent with IADL needs. This question is asked for every helper the respondent reported helped them (children and grandchildren, relatives, non-relatives, and professionals), but is not asked for help from spouses or from employees of an institution starting in Wave 6. Employees of institutions are included in the count of helpers who are paid to help the respondent. In the AHEAD cohort in Wave 2, if the respondent is helped less than once per week, then the question is not asked and RwIHLPPDN is assigned special missing .w in Wave 2. In Wave 2, RwIHLPPDN is assigned special missing .q if the respondent participated in the HRS cohort in Wave 2. RwIHLPPDN is not available in Wave 1.

SwIHLPPDN indicates the number of helpers who are paid to help the respondent's current wave's spouse and is taken directly from RwIHLPPDN. In addition to the special missing codes employed by RwIHLPPDN, SwIHLPPDN employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwIHLPPDIN indicates the number of paid helpers for IADLs for whom Medicaid, the state's version of Medicaid, or insurance helps pay for. RwIHLPPDIN is assigned a value of 0 if the respondent has no paid helpers for IADLs. This question is asked for every helper the respondent reported was paid to help them (children and grandchildren, relatives, non-relatives, and professionals), but is not asked for help from spouses or from employees of an institution starting in Wave 6. As such, if the respondent's only helper is their spouse, then special missing .s is assigned, and if the respondent's only helper is an employee of an institution, then special missing .e is assigned. In the AHEAD cohort in Wave 2, if the respondent is helped less than once per week, then the question is not asked and RwIHLPPDIN is assigned special missing .w in Wave 2. In Wave 2, RwIHLPPDIN is assigned special missing .q if the respondent participated in the HRS cohort in Wave 2. RwIHLPPDIN is not available in Wave 1.

SwIHLPPDIN indicates the number of paid helpers of the respondent's current wave's spouse for whom Medicaid, the state's version of Medicaid, or insurance helps pay for and is taken directly from RwIHLPPDIN. In addition to the special missing codes employed by RwIHLPPDIN, SwIHLPPDIN employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwIHLPPDAMT indicates the total monthly out-of-pocket cost for the respondent's paid caregiving for IADLs. RwIHLPPDAMT is the sum of the out-of-pocket monthly costs paid for all paid helpers. RwIHLPPDAMT is assigned a value of 0 if the respondent has no paid helpers for IADLs. The amount the respondent and their spouse paid for each caregiver (not accounting expenses paid by Medicaid, the state's version of Medicaid, or insurance) is asked for every paid helper the respondent reported helped them (children and grandchildren, relatives, non-relatives, and professionals), but is not asked for help from spouses or from employees of an institution starting in Wave 6. As such, if the respondent's only helper is their spouse, then special missing .s is assigned, and if the respondent's only helper is an employee of an institution, then special missing .e is assigned. In the AHEAD cohort in Wave 2, if the respondent is

helped less than once per week, then the question is not asked and RwiHLPPDAMT is assigned special missing .w in Wave 2. RwiHLPPDAMTM indicates the number of paid helpers who helped the respondent for whom no amount of out-of-pocket cost was reported and was not accounted for in RwiHLPPDAMT, including if the helper was the respondent's spouse or an employee of an institution. In Wave 2, RwiHLPPDAMT is assigned special missing .q if the respondent participated in the HRS cohort in Wave 2. RwiHLPPDAMT is not available in Wave 1.

SwiHLPPDAMT indicates the total monthly out-of-pocket cost for the respondent's current wave's spouse's paid caregiving, and its values are taken from RwiHLPPDAMT. SwiHLPPDAMTM indicates the number of paid helpers who helped the respondent's current spouse for whom no amount of out-of-pocket cost was reported and is taken from RwiHLPPDAMTM. In addition to the special missing codes employed by RwiHLPPDAMT and RwiHLPPDAMTM, SwiHLPPDAMT and SwiHLPPDAMTM employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Respondents are not asked who helps them with IADLS at all in Wave 1 and for the HRS cohort in Wave 2. All variables listed above are not available in Wave 1.

In Wave 2 for those in the AHEAD cohort, respondents are asked whether they are able to do each IADL activity without help, and if not, are asked for the two people who help most often with preparing meals, grocery shopping, making phone calls, and taking medications, and for one person who usually helps manage money if they are not able to manage money without help. Starting in Wave 3, respondents are asked to report up to 6 people who help with preparing meals, grocery shopping, making phone calls, and taking medication, and up to 2 people who help with managing money.

Only in the AHEAD cohort in Wave 2, the respondent is not asked these questions if their helper helps less than once per week. In this wave, RwiHLPPDN, RwiHLPPDIN, and RwiHLPPDAMT are assigned special missing .w in Wave 2 if the respondent is not asked these questions because their helper helps less than once per week.

Respondents are asked who helps them with IADLS starting in the AHEAD cohorts in Wave 2 and Wave 3. As such, RwiHLPPDN, RwiHLPPDIN, RwiHLPPDAMT, and RwiHLPPDAMTM are available starting in the AHEAD cohorts in Wave 2 and Wave 3. If the respondent participated in the HRS cohort in Wave 2, then RwiHLPPDN, RwiHLPPDIN, RwiHLPPDAMT, and RwiHLPPDAMTM are assigned special missing .q in Wave 2 because they were not asked this question.

In all available waves, the respondent is not asked these questions if their spouse is their only helper, and these variables are assigned special missing .s. The respondent is also not asked these questions if their only helper is an employee of an institution starting in Wave 6, in which case, these helpers are added to the count of paid helpers in RwiHLPPDN, are assigned special missing .e in RwiHLPPDIN and RwiHLPPDAMT, and add to the count of missing values in RwiHLPPDAMTM.

### How Constructed:

RwRCANY indicates whether the respondent receives any care for difficulties with activities of daily living (ADL) and/or instrumental activities of daily living (IADL). If the respondent reports having difficulty with an ADL or IADL, then they are asked whether someone helps them with that activity. The activities of daily living include dressing, walking across a room, bathing, eating, getting in and out of bed, and using the toilet. The instrumental activities of daily living include preparing meals, grocery shopping, making phone calls, taking medications, and managing money. RwRCANY is assigned a value of 0 if the respondent has difficulty with at least one ADL or IADL but receives no help with the activity. RwRCANY is assigned a value of 1 if the respondent has difficulty with at least one ADL or IADL and someone helps with at least one of the activities. RwRCANY is assigned special missing .x if the respondent has no difficulty with any ADLs or IADLs. These questions are not asked to HRS Wave 2 respondents, and so are assigned special missing .q in Wave 2. Don't know, refused, and other missing responses are assigned special missing .d, .r, and .m, respectively. RwRCANY is assigned a blank missing

(.) if the respondent did not participate in the current wave. The information used to derive this variable is taken from the respondent-level HRS helper files.

SwRCANY indicates whether the respondent's current wave's spouse receives any care for difficulties with ADLs or IADLs, and its values are taken from RwRCANY. In addition to the special missing codes employed by RwRCANY, SwRCANY employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Questions about receiving help for difficulties with ADLs are not asked in Wave 1 and for the HRS cohort in Wave 2.

Questions about help with ADL and IADL activities are asked differently in the AHEAD cohort in Wave 2 than in other waves. In this wave, if the respondent reports receiving help with an ADL, then they are asked how frequently they receive help with that ADL, and then asked whether they have difficulty with the ADL. In this wave, respondents are asked whether they are able to do each IADL activity without help, and if not, are asked for the two people who help most often with preparing meals, grocery shopping, making phone calls, and taking medications, and for one person who usually helps manage money if they are not able to manage money without help. In Waves 3 and onward, the respondent is first asked whether they have difficulty with an ADL or IADL, and if so, they are asked whether someone helps them with that activity. The coding for the AHEAD cohort in Wave 2 has been adjusted to make the measures as comparable as possible to other waves.

### How Constructed:

RwRCAANY indicates whether the respondent receives any informal care for difficulties with activities of daily living (ADL) and/or instrumental activities of daily living (IADL). The activities of daily living include dressing, walking across a room, bathing, eating, getting in and out of bed, and using the

toilet. The instrumental activities of daily living include preparing meals, grocery shopping, making phone calls, taking medications, and managing money. In the AHEAD cohort in Wave 2, the respondent is first asked whether anyone helps them with each activity, then whether they have difficulty with it, and then who helps if they report receiving help with that activity. In this wave, respondents are asked whether they are able to do each IADL activity without help, and if not, are asked for the two people who help most often with preparing meals, grocery shopping, making phone calls, and taking medications, and for one person who usually helps manage money if they are not able to manage money without help. In Waves 3 and onward, if the respondent reports having difficulty with an ADL or IADL, then they are asked whether someone helps them with that activity. If someone helps with the activity, they are asked for the relationships of up to 7 people who help them with ADLs, up to 6 people who help them with IADLs (preparing meals, grocery shopping, making phone calls, and taking medications), and up to 2 people who help them with managing money. The information used to derive this variable is taken from the respondent-level and helper-level HRS helper files.

For the AHEAD cohort in Wave 2, the following relationships are considered to provide informal care: spouse, child, spouse of child, grandchild, spouse of grandchild, other relative, and other individual. For the AHEAD cohort in Wave 3 and the HRS cohorts in Waves 3 through 5, the following relationships are considered to provide informal care: spouse, child, child-in-law, unlisted child or child-in-law, step/partner child, grandchild, sibling, sibling of spouse, parent or parent-in-law, other relative, and other individual. In Waves 6 and onward, the following relationships are considered to provide informal care: spouse/partner, son, stepson, spouse/partner of daughter, daughter, stepdaughter, spouse/partner of son, grandchild, father, father of spouse/partner, mother, mother of spouse/partner, parents, brother, brother of spouse/partner, sister, sister of spouse/partner, other relative, other individual, former spouse, unlisted child or child-in-law, former step-child, former child-in-law, relationship unknown, and spouse/partner of grandchild.

RwRCAANY is assigned a value of 0 if the respondent has difficulty with at least one ADL or IADL but receives no help with the activity from an informal caregiver or does not receive any help at all. RwRCAANY is assigned a value of 1 if the respondent has difficulty with at least one ADL or IADL and an informal caregiver helps with at least one of the activities. RwRCAANY is assigned special missing .x if the respondent has no difficulty with any ADLs or IADLs. Respondents in the AHEAD cohort in Wave 2 are not asked who helps them with ADLs if they report receiving help with the ADL some of the time or occasionally (as opposed to most/all of the time), in which case RwRCAANY is assigned special missing .f. These questions are not asked for the HRS cohort in Wave 2, so RwRCAANY is assigned special missing .q in this wave. Don't know, refused, and other missing responses are assigned special missing .d, .r, and .m, respectively. RwRCAANY is assigned a blank missing (.) if the respondent did not participate in the current wave.

SwRCAANY indicates whether the respondent's current wave's spouse receives any informal care for difficulties with ADLs or IADLs, and its values are taken from RwRCAANY. In addition to the special missing codes employed by RwRCAANY, SwRCAANY employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

These questions are not asked at all in Wave 1 and for the HRS cohort in Wave 2.

In the AHEAD cohort in Wave 2, if the respondent reports receiving help with an ADL, then they are asked how frequently they receive help with that activity. If the respondent reports receiving help most/all of the time, then they are asked who helps them with that activity. They are not asked who helps them if they report receiving help some of the time or occasionally. In this wave, respondents are asked whether they are able to do each IADL activity without help, and if not, are asked for the two people who help most often with preparing meals, grocery shopping, making phone calls, and taking medications, and for one person who usually helps manage money if they are not able to manage money without help.

In Waves 3 and onward, if the respondent reports having difficulty with an ADL or IADL, then they are asked whether someone helps them with that activity. If someone helps with the activity, they are asked for the relationships of up to 7 people who help them with ADLs, up to 6 people who help them with IADLs (preparing meals, grocery shopping, making phone calls, and taking medications), and up to 2 people who help them with managing money.

The options for type of relationship change slightly between the AHEAD cohort in Wave 2, Waves 3 through 5, and Waves 6 and onward, but these categories have been combined to keep the definitions as similar as possible between waves for RWRCAANY.

## How Constructed:

The following variables indicate whether the respondent's spouse helps the respondent with any ADL or IADL needs. The activities of daily living include dressing, walking across a room, bathing, eating, getting in and out of bed, and using the toilet. The instrumental activities of daily living include preparing meals, grocery shopping, making phone calls, taking medications, and managing money. In the AHEAD cohort in Wave 2, if the respondent reports receiving help with an ADL activity, then they are asked whether they have difficulty with it and who helps them with that activity. In this wave, respondents are asked whether they are able to do each IADL activity without help, and if not, are asked for the two people who help most often with preparing meals, grocery shopping, making phone calls, and taking medications, and for one person who usually helps manage money if they are not able to manage money without help. In Waves 3 and onward, if the respondent reports having difficulty with an ADL or IADL, then they are asked whether someone helps them with that activity. If someone helps with the activity, they are asked for the relationships of up to 7 people who help them with ADLs, up to 6 people who help them with IADLs (preparing meals, grocery shopping, making phone calls, and taking medications), and up to 2 people who help them with managing money. The respondent is asked whether each reported helper is paid, unless that helper is the respondent's spouse or an employee of an institution. The information used to derive these variables is taken from the respondent-level and helper-level HRS helper files.

The following variables are coded as special missing .x if the respondent reports no difficulty with any ADL or IADL, and are coded as special missing .h if the respondent reports difficulty with an ADL or IADL but does not receive any help. For the AHEAD cohort in Wave 2, these variables are assigned special missing .f if the respondent reports receiving help from someone for difficulties with ADL activities "some of the time" or "occasionally", and not "most (all) of the time". Don't know, refused, or otherwise missing responses are assigned special missing values .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not participate in the current wave.

RwRSCARE, RwRSCAREN, RwRSCAREDPM, RwRSCAREDPMM, RwRSCAREHR, and RwRSCAREHRM include help from the current spouse/partner of the respondent in Waves 2 through 5, and the current or former spouse/partner of the respondent in Wave 6 and onward.

RwRSCARE indicates whether the respondent's spouse or former spouse helps the respondent with any ADL or IADL needs. RwRSCAREN indicates the number of the respondent's spouses or former spouses who help the respondent with ADL or IADL needs. RwRSCARE is coded as 0 if the respondent receives no assistance from their spouse, and coded as 1 if the respondent does receive help from their spouse. In Wave 2, RwRSCARE and RwRSCAREN are assigned special missing .q if the respondent participated in the HRS cohort in Wave 2. RwRSCARE is not available in Wave 1 and RwRSCAREN is not available in Waves 1, 3, and 4.

RwRSCAREDPM indicates the number of total days per month the respondent's spouse or former spouse helps the respondent with ADL or IADL needs. This variable comprises converted responses reported in terms of 'Days in last month', 'Days per week', and 'Everyday'. Respondents were allowed to report the amount of time each helper assists in one of the three mentioned frequencies. RwRSCAREDPM is the sum of days per month for all spouse or former spouse helpers, and so values can be over 31 days. RwRSCAREDPM is calculated as long as there is one non-missing value. RwRSCAREDPMM indicates the number of spouses or former spouses who helped the respondent for whom no value of days was reported and was not accounted for in RwRSCAREDPM. RwRSCAREDPMM is assigned special missing .m if the respondent's spouse or former spouse does not help the respondent or prior information was missing. RwRSCAREDPM and RwRSCAREDPMM are not available in Waves 1 through 4.

RwRSCAREHR indicates the number of total hours per day the respondent's spouse or former spouse helps the respondent with any ADL or IADL needs. Respondents are asked, on days their spouse helps with a particular ADL or IADL need, how many hours per day their spouse helps. If the respondent reports less than an hour, then a 1 is recorded. RwRSCAREHR is the sum of hours per day for all spouse or former spouse helpers, and so values can be over 24 hours. RwRSCAREHR is calculated as long as there is one non-missing value. RwRSCAREHRM indicates the number of spouses or former spouses who helped the respondent for whom no value of hours was reported and was not accounted for in RwRSCAREHR. RwRSCAREHRM is assigned special missing .m if the respondent was not helped by any spouse or former spouses or prior information was missing. If the respondent participated in the HRS cohort in Wave 2, then RwRSCAREHR and RwRSCAREHRM are assigned special missing .q in Wave 2. RwRSCAREHR and RwRSCAREHRM are not available in Waves 1, 3, and 4.

SwRSCARE, SwRSCAREN, SwRSCAREDPM, and SwRSCAREHR indicate whether, the number, and the frequency with which the respondent's current wave's spouse receives help from the respondent or their former spouse, and their values are taken from RwrSCARE, RwrSCAREN, RwrSCAREDPM, and RwrSCAREHR. SwRSCAREDPMM and SwRSCAREHRM indicate whether or not a value was reported for the number of days and hours the respondent's current spouse was helped by the respondent or their former spouse and are taken from RwrSCAREDPMM and RwrSCAREHRM. In addition to the special missing codes employed by the respondent variables, the spouse variables employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Respondents are not asked who helps them with ADLs or IADLs at all in Wave 1 and for the HRS cohort in Wave 2. All variables listed above are not available in Wave 1.

In Wave 2 for those in the AHEAD cohort, respondents are asked to report one person who helps them with each individual ADL that they report someone helping them with. In this wave, respondents are asked whether they are able to do each IADL activity without help, and if not, are asked for the two people who help most often with preparing meals, grocery shopping, making phone calls, and taking medications, and for one person who usually helps manage money if they are not able to manage money without help. Starting in Wave 3, respondents are asked to report up to 7 people who help with ADLs, up to 6 people who help with preparing meals, grocery shopping, making phone calls, and taking medication, and up to 2 people who help with managing money.

In Wave 2, AHEAD respondents are asked whether anyone helps the respondent with each ADL prior to being asked if they have difficulty with each ADL, making this wave not completely comparable with the subsequent waves, although the coding has been adjusted to make this wave as comparable as possible.

Respondents are asked who helps them with ADLs or IADLs starting in the AHEAD cohorts in Wave 2 and Wave 3. As such, RwrSCARE is available starting in the AHEAD cohorts in Wave 2 and Wave 3. Additionally, RwrSCAREN is available for the AHEAD cohort in Wave 2. If the respondent participated in the HRS cohort in Wave 2, then these variables are assigned special missing .q in Wave 2 because they were not asked this question.

In the AHEAD cohort in Wave 2, respondents can report that their spouse helps them with ADLs or IADLs, and were asked how frequently and the number of hours that their spouse provides help. However, the frequency of help is not comparable to other waves and so RwrSCAREDPM and RwrSCAREDPMM are not available in the AHEAD cohort in Wave 2. The number of hours that their spouse helps is comparable, and so RwrSCAREHR and RwrSCAREHRM are available in the AHEAD cohort in Wave 2. If the respondent participated in the HRS cohort in Wave 2, then RwrSCAREHR and RwrSCAREHRM are assigned special missing .q in Wave 2 because they were not asked this question.

In the AHEAD and HRS cohorts in Wave 3 and Wave 4, respondents can report that their current spouse helps them with ADLs or IADLs. However, respondents are not asked about the number of days or number of hours that the respondent's spouse helps the respondent in these waves. As such, RwrSCAREN, RwrSCAREDPM, RwrSCAREDPMM, RwrSCAREHR, and RwrSCAREHRM are not available in Waves 3 and 4.

Starting in Wave 5, respondents are asked who helps them with ADLs or IADLs, and are asked about the number of days and number of hours that the respondent's spouse helps the respondent. As such, RwrSCAREN, RwrSCAREDPM, RwrSCAREDPMM, RwrSCAREHR, and RwrSCAREHRM are available beginning in Wave 5.

## HRS Variables Used:

### RAND HRS:

R10BATHA	r10batha:w10 r any diff-bathing, shower

### How Constructed:

The following variables indicate whether the respondent's children or grandchildren help the respondent with any ADL or IADL needs. The activities of daily living include dressing, walking across a room, bathing, eating, getting in and out of bed, and using the toilet. The instrumental activities of daily living include preparing meals, grocery shopping, making phone calls, taking medications, and managing money. In the AHEAD cohort in Wave 2, the respondent is first asked whether anyone helps them with each ADL activity, then whether they have difficulty with it, and then who helps if they report receiving help with that activity. In this wave, respondents are asked whether they are able to do each IADL activity without help, and if not, are asked for the two people who help most often with preparing meals, grocery shopping, making phone calls, and taking medications, and for one person who usually helps manage money if they are not able to manage money without help. In Waves 3 and onward, if the respondent reports having difficulty with an ADL or IADL, then they are asked whether someone helps them with that activity. If someone helps with the activity, they are asked for the relationships of up to 7 people who help them with ADLs, up to 6 people who help them with IADLs (preparing meals, grocery shopping, making phone calls, and taking medications), and up to 2 people who help them with managing money. The respondent is asked whether each reported helper is paid, unless that helper is the respondent's spouse or an employee of an institution. The information used to derive these variables is taken from the respondent-level and helper-level HRS helper files.

The following variables are coded as special missing .x if the respondent reports no difficulty with any ADL or IADL, and are coded as special missing .h if the respondent reports difficulty with an ADL or IADL but does not receive any help. For the AHEAD cohort in Wave 2, these variables are assigned special missing .f if the respondent reports receiving help from someone for difficulties with ADL activities "some of the time" or "occasionally", and not "most (all) of the time". Don't know, refused, or otherwise missing responses are assigned special missing values .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not participate in the current wave.

RwRCCARE, RwRCCAREN, RwRCCAREDP, RwRCCAREDPMM, RwRCCAREHR, RwRCCAREHRM, and RwRCCAREPD include help from the respondent's child, spouse of child, grandchild, and spouse of grandchild in the AHEAD cohort in Wave 2. These variables include help from the respondent's child, child-in-law, unlisted child or child-in-law, step/partner child, and grandchild in Waves 3 through 5. These variables include help from the respondent's sons, step-sons, spouse/partner of daughters, son-in-laws, daughters, step-daughters, spouse/partner of sons, daughter-in-laws, grandchildren, unlisted children or children-in-law, former

step-children, former children-in-law, spouse/partner of grandchildren, ambiguous child relation, and ambiguous child-in-law relation in Waves 6 and onward.

RwRCCARE indicates whether any of the respondent's children or grandchildren help the respondent with ADL or IADL needs. RwRCCAREN indicates the number of the respondent's children or grandchildren who help the respondent with ADL or IADL needs. RwRCCARE is coded as 0 if none of the respondent's children or grandchildren help the respondent with ADLs or IADLS, and is coded as 1 if at least one of the respondent's children or grandchildren help the respondent with ADLs or IADLS. In Wave 2, RwRCCARE and RwRCCAREN are assigned special missing .q if the respondent participated in the HRS cohort in Wave 2. RwRCCARE and RwRCCAREN are not available in Wave 1.

RwRCCAREDPM indicates the number of total days per month the respondent's children or grandchildren help the respondent with ADL or IADL needs. This variable comprises converted responses reported in terms of 'Days in last month', 'Days per week', and 'Everyday'. Respondents were allowed to report the amount of time each helper assists in one of the three mentioned frequencies. RwRCCAREDPM is the sum of days per month for all children or grandchildren helpers, and so values can be over 31 days. RwRCCAREDPM is calculated as long as there is one non-missing value. RwRCCAREDPMM indicates the number of children or grandchildren who helped the respondent for whom no value of days was reported and was not accounted for in RwRCCAREDPM. RwRCCAREDPMM is assigned special missing .m if the respondent was not helped by any children or grandchildren or prior information was missing. RwRCCAREDPM and RwRCCAREDPMM are not available in Waves 1 and 2.

RwRCCAREHR indicates the number of hours per day the respondent's children or grandchildren help the respondent with ADL or IADL needs. Respondents are asked, on days their children or grandchildren help, how many hours per day that is. If the respondent reports less than an hour, then a 1 is recorded. RwRCCAREHR is the sum of hours per day for all children or grandchildren helpers, and so values can be over 24 hours. RwRCCAREHR is calculated as long as there is one non-missing value. RwRCCAREHRM indicates the number of children or grandchildren who helped the respondent for whom no value of hours was reported and was not accounted for in RwRCCAREHR. RwRCCAREHR is assigned a special missing .w in the AHEAD cohort in Wave 2 if this question is not asked because the respondent's children or grandchildren help less than once per week. RwRCCAREHRM is assigned special missing .m if the respondent was not helped by any children or grandchildren or prior information was missing. In Wave 2, RwRCCAREHR and RwRCCAREHRM are assigned special missing .q if the respondent participated in the HRS cohort in Wave 2. RwRCCAREHR and RwRCCAREHRM are not available in Wave 1.

RwRCCAREPD indicates whether any of the respondent's children or grandchildren helpers are paid for the care given to the respondent for ADL or IADL needs. RwRCCAREPD is assigned a value of 0 if the respondent receives no care from children or grandchildren, or the respondent does receive care from children or grandchildren and none of them are paid. RwRCCAREPD is assigned a value of 1 if the respondent receives care from children or grandchildren and at least one of them is paid for the care given to the respondent. RwRCCAREPD is assigned a special missing .w in the AHEAD cohort in Wave 2 if this question is not asked because the respondent's children or grandchildren help less than once per week. In Wave 2, RwRCCAREPD is assigned special missing .q if the respondent participated in the HRS cohort in Wave 2. RwRCCAREPD is not available in Wave 1.

SwRCCARE, SwRCCAREN, SwRCCAREDPM, SwRCCAREHR, and SwRCCAREPD indicate whether the respondent's current wave's spouse receives help from children or grandchildren, the number, the frequency with which, and whether any are paid, and their values are taken from RwRCCARE, RwRCCAREN, RwRCCAREDPM, RwRCCAREHR, and RwRCCAREPD. SwRCCAREDPMM and SwRCCAREHRM indicate the number of children who helped the respondent's current spouse for whom a value was not reported for the number of days and hours and are taken from RwRCCAREDPMM and RwRCCAREHRM. In addition to the special missing codes employed by the respondent variables, the spouse variables employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Respondents are not asked who helps them with ADLs or IADLS at all in Wave 1 and for the HRS cohort in Wave 2. All variables listed above are not available in Wave 1.

In Wave 2 for those in the AHEAD cohort, respondents are asked to report one person who helps them with each individual ADL that they report someone helping them with. In this wave, respondents are asked

whether they are able to do each IADL activity without help, and if not, are asked for the two people who help most often with preparing meals, grocery shopping, making phone calls, and taking medications, and for one person who usually helps manage money if they are not able to manage money without help. Starting in Wave 3, respondents are asked to report up to 7 people who help with ADLs, up to 6 people who help with preparing meals, grocery shopping, making phone calls, and taking medication, and up to 2 people who help with managing money.

In Wave 2, AHEAD respondents are asked whether anyone helps the respondent with each ADL prior to being asked if they have difficulty with each ADL, making this wave not completely comparable with the subsequent waves, although the coding has been adjusted to make this wave as comparable as possible.

Respondents are asked who helps them with ADLS or IADLS, and whether they are paid starting in the AHEAD cohorts in Wave 2 and Wave 3. As such, RWRCCARE, RWRCCAREN, and RWRCCAREPD are available starting in the AHEAD cohorts in Wave 2 and Wave 3. If the respondent participated in the HRS cohort in Wave 2, then RWRCCARE, RWRCCAREN, and RWRCCAREPD are assigned special missing .q in Wave 2 because they were not asked these questions.

In the AHEAD cohort in Wave 2, respondents can report that a child or grandchild helps them with ADLs or IADLs, and were asked how frequently and the number of hours that the child or grandchild provides help. However, the frequency of help is not comparable to other waves and so RWRCCAREDPM and RWRCCAREDPMM are not available in the AHEAD cohort in Wave 2. The number of hours that the child or grandchild helps is comparable, and so RWRCCAREHR and RWRCCAREHRM are available in this wave. If the respondent participated in the HRS cohort in Wave 2, then RWRCCAREHR and RWRCCAREHRM are assigned special missing .q in Wave 2 because they were not asked this question.

Starting in Wave 3, respondents are asked who helps them with ADLs or IADLs, and are asked about the number of days and number of hours that the respondent's child or grandchild helps the respondent. As such, RWRCCAREDPM and RWRCCAREDPMM are available beginning in Wave 3.

In the AHEAD cohort in Wave 2, respondents are not asked whether the helper is paid if they help less than once per week. Starting in Wave 3, respondents are asked whether the helper is paid regardless of the frequency of the help.

## How Constructed:

The following variables indicate whether any of the respondent's relatives help the respondent with any ADL or IADL needs. The activities of daily living include dressing, walking across a room, bathing, eating, getting in and out of bed, and using the toilet. The instrumental activities of daily living include preparing meals, grocery shopping, making phone calls, taking medications, and managing money. In the AHEAD cohort in Wave 2, the respondent is first asked whether anyone helps them with each ADL activity, then whether they have difficulty with it, and then who helps if they report receiving help with that activity. In this wave, respondents are asked whether they are able to do each IADL activity without help, and if not, are asked for the two people who help most often with preparing meals, grocery shopping, making phone calls, and taking medications, and for one person who usually helps manage money if they are not able to manage money without help. In Waves 3 and onward, if the respondent reports having difficulty with an ADL or IADL, then they are asked whether someone helps them with that activity. If someone helps with the activity, they are asked for the relationships of up to 7 people who help them with ADLs, up to 6 people who help them with IADLs (preparing meals, grocery shopping, making phone calls, and taking medications), and up to 2 people who help them with managing money. The respondent is asked whether each reported helper is paid, unless that helper is the respondent's spouse or an employee of an institution. The information used to derive these variables is taken from the respondent-level and helper-level HRS helper files.

The following variables are coded as special missing .x if the respondent reports no difficulty with any ADL or IADL, and are coded as special missing .h if the respondent reports difficulty with an ADL or IADL but does not receive any help. For the AHEAD cohort in Wave 2, these variables are assigned special missing .f if the respondent reports receiving help from someone for difficulties with ADL activities "some of the time" or "occasionally", and not "most (all) of the time". Don't know, refused, or otherwise missing responses are assigned special missing values .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not participate in the current wave.

RwRRCARE, RwRRCAREN, RwRRCAREDP, RwRRCAREDPMM, RwRRCAREHR, RwRRCAREHRM, and RwRRCAREPD include help from the respondent's other relative in the AHEAD cohort in Wave 2. These variables include help from the respondent's sibling, sibling of spouse, parent or parent-in-law, and other relative in Waves 3 through 5. These variables include help from the respondent's father, father of spouse/partner, mother, mother of spouse/partner, parents, brother, brother of spouse/partner, sister, sister of spouse/partner, or other relative in Waves 6 and onward.

RwRRCARE indicates whether any of the respondent's relatives help the respondent with ADL or IADL needs. RwRRCAREN indicates the number of the respondent's relatives who help the respondent with ADL or IADL needs. RwRRCARE is coded as 0 if none of the respondent's relatives help the respondent with ADLs or IADLs, and is coded as 1 if at least one of the respondent's relatives help the respondent with ADLs or IADLs. In Wave 2, RwRRCARE and RwRRCAREN are assigned special missing .q if the respondent participated in the HRS cohort in Wave 2. RwRRCARE and RwRRCAREN are not available in Wave 1.

RwRRCAREDPM indicates the number of total days per month the respondent's relatives help the respondent with ADL or IADL needs. This variable comprises converted responses reported in terms of 'Days in last month', 'Days per week', and 'Everyday'. Respondents were allowed to report the amount of time each helper assists in one of the three mentioned frequencies. RwRRCAREDPM is the sum of days per month for all relative helpers, and so values can be over 31 days. RwRRCAREDPM is calculated as long as there is one non-missing value. RwRRCAREDPMM indicates the number of relatives who helped the respondent for whom no value of days was reported and was not accounted for in RwRRCAREDPM. RwRRCAREDPMM is assigned special missing .m if the respondent was not helped by any relatives or prior information was missing. RwRRCAREDPM and RwRRCAREDPMM are not available in Waves 1 and 2.

RwRRCAREHR indicates the number of hours per day the respondent's relatives help the respondent with ADL or IADL needs. Respondents are asked, on days their relatives help, how many hours per day that is. If the respondent reports less than an hour, then a 1 is recorded. RwRRCAREHR is the sum of hours per day for all relative helpers, and so values can be over 24 hours. RwRRCAREHR is calculated as long as there is one non-missing value. RwRRCAREHRM indicates the number of relatives who helped the respondent for whom no value of hours was reported and was not accounted for in RwRRCAREHR. RwRRCAREHR is assigned a special missing .w in the AHEAD cohort in Wave 2 if this question is not asked because the respondent's relatives help less than once per week. RwRRCAREHRM is assigned special missing .m if the respondent was not helped by any relatives or prior information was missing. In Wave 2, RwRRCAREHR and RwRRCAREHRM are assigned special missing .q if the respondent participated in the HRS cohort in Wave 2. RwRRCAREHR and RwRRCAREHRM are not available in Wave 1.

RwRRCAREPD indicates whether any of the respondent's relative helpers are paid for the care given to the respondent for ADL or IADL needs. RwRRCAREPD is assigned a value of 0 if the respondent receives no care from relatives, or the respondent does receive care from relatives and none of them are paid. RwRRCAREPD is assigned a value of 1 if the respondent receives care from relatives and at least one of them is paid for the care given to the respondent. RwRRCAREPD is assigned a special missing .w in the AHEAD cohort in Wave 2 if this question is not asked because the respondent's relatives help less than once per week. In Wave 2, RwRRCAREPD is assigned special missing .q if the respondent participated in the HRS cohort in Wave 2. RwRRCAREPD is not available in Wave 1.

SwRRCARE, SwRRCAREN, SwRRCAREDPM, SwRRCAREHR, and SwRRCAREPD indicate whether the respondent's current wave's spouse receives help from relatives, the number, the frequency with which, and whether any are paid, and their values are taken from RwRRCARE, RwRRCAREN, RwRRCAREDPM, RwRRCAREHR, and RwRRCAREPD. SwRRCAREDPMM and SwRRCAREHRM indicate the number of relatives who helped the respondent's current spouse for whom a value was not reported for the number of days and hours and are taken from RwRRCAREDPMM and RwRRCAREHRM. In addition to the special missing codes employed by the respondent variables, the spouse variables employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Respondents are not asked who helps them with ADLs or IADLs at all in Wave 1 and in the HRS cohort in Wave 2. All variables listed above are not available in Wave 1.

In Wave 2 for those in the AHEAD cohort, respondents are asked to report one person who helps them with each individual ADL that they report someone helping them with. In this wave, respondents are asked whether they are able to do each IADL activity without help, and if not, are asked for the two people who help most often with preparing meals, grocery shopping, making phone calls, and taking medications, and for one person who usually helps manage money if they are not able to manage money without help. Starting in Wave 3, respondents are asked to report up to 7 people who help with ADLs, up to 6 people who help with preparing meals, grocery shopping, making phone calls, and taking medication, and up to 2 people who help with managing money.

In Wave 2, AHEAD respondents are asked whether anyone helps the respondent with each ADL prior to being asked if they have difficulty with each ADL, making this wave not completely comparable with the subsequent waves, although the coding has been adjusted to make this wave as comparable as possible.

Respondents are asked who helps them with ADLs or IADLs, and whether they are paid starting in the AHEAD cohorts in Wave 2 and Wave 3. As such, RWRRCARE, RWRRCAREN, and RWRRCAREPD are available starting in the AHEAD cohorts in Wave 2 and Wave 3. If the respondent participated in the HRS cohort in Wave 2, then RWRRCARE, RWRRCAREN, and RWRRCAREPD are assigned special missing .q in Wave 2 because they were not asked these questions.

In the AHEAD cohort in Wave 2, respondents can report that a relative helps them with ADLs or IADLs, and were asked how frequently and the number of hours that the relative provides help. However, the frequency of help is not comparable to other waves and so RWRRCAREDPM and RWRRCAREDPMM are not available in this wave. The number of hours that the relative helps is comparable, and so RWRRCAREHR and RWRRCAREHRM are available in this wave. If the respondent participated in the HRS cohort in Wave 2, then RWRRCAREHR and RWRRCAREHRM are assigned special missing .q in Wave 2 because they were not asked this question.

Starting in Wave 3, respondents are asked who helps them with ADLs or IADLs, and are asked about the number of days or number of hours that the respondent's relative helps the respondent. As such, RWRRCAREDPM and RWRRCAREDPMM are available beginning in Wave 3.

In the AHEAD cohort in Wave 2, respondents are not asked whether the helper is paid if they help less than once per week. Starting in Wave 3, respondents are asked whether the helper is paid regardless of the frequency of the help.

## How Constructed:

The following variables indicate whether any non-relative helps the respondent with any ADL or IADL needs. The activities of daily living include dressing, walking across a room, bathing, eating, getting in and out of bed, and using the toilet. The instrumental activities of daily living include preparing meals, grocery shopping, making phone calls, taking medications, and managing money. In the AHEAD cohort in Wave 2, the respondent is first asked whether anyone helps them with each ADL activity, then whether they have difficulty with it, and then who helps if they report receiving help with that activity. In this wave, respondents are asked whether they are able to do each IADL activity without help, and if not, are asked for the two people who help most often with preparing meals, grocery shopping, making phone calls, and taking medications, and for one person who usually helps manage money if they are not able to manage money without help. In Waves 3 and onward, if the respondent reports having difficulty with an ADL or IADL, then they are asked whether someone helps them with that activity. If someone helps with the activity, they are asked for the relationships of up to 7 people who help them with ADLs, up to 6 people who help them with IADLs (preparing meals, grocery shopping, making phone calls, and taking medications), and up to 2 people who help them with managing money. The respondent is asked whether each reported helper is paid, unless that helper is the respondent's spouse or an employee of an institution. The information used to derive these variables is taken from the respondent-level and helper-level HRS helper files.

The following variables are coded as special missing .x if the respondent reports no difficulty with any ADL or IADL, and are coded as special missing .h if the respondent reports difficulty with an ADL or IADL but does not receive any help. For the AHEAD cohort in Wave 2, these variables are assigned special missing .f if the respondent reports receiving help from someone for difficulties with ADL activities "some of the time" or "occasionally", and not "most (all) of the time". Don't know, refused, or otherwise missing responses are assigned special missing values .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not participate in the current wave.

RwRFCARE, RwRFCAREN, RwRFCAREDP, RwRFCAREDPMM, RwRFCAREHR, RwRFCAREHRM, and RwRFCAREPD include help from other individuals in the AHEAD cohort in Wave 2 and in Waves 3 through 5. These variables include help from other individuals and persons of unknown relationships in Waves 6 and onward.

RwRFCARE indicates whether any of the respondent's non-relatives help the respondent with ADL or IADL needs. RwRFCAREN indicates the number of the respondent's non-relatives who help the respondent with ADL

or IADL needs. RwrFCARE is coded as 0 if none of the respondent's non-relatives help the respondent with ADLs or IADLs, and is coded as 1 if at least one of the respondent's non-relatives help the respondent with ADLs or IADLs. In Wave 2, RwrFCARE and RwrFCAREN are assigned special missing .q if the respondent participated in the HRS cohort in Wave 2. RwrFCARE and RwrFCAREN are not available in Wave 1.

RwrFCAREDPM indicates the number of total days per month the respondent's non-relatives help the respondent with ADL or IADL needs. This variable comprises converted responses reported in terms of 'Days in last month', 'Days per week', and 'Everyday'. Respondents were allowed to report the amount of time each helper assists in one of the three mentioned frequencies. RwrFCAREDPM is the sum of days per month for all non-relative helpers, and so values can be over 31 days. RwrFCAREDPM is calculated as long as there is one non-missing value. RwrFCAREDPMM indicates the number of non-relatives who helped the respondent for whom no value of days was reported and was not accounted for in RwrFCAREDPM. RwrFCAREDPMM is assigned special missing .m if the respondent was not helped by any non-relatives or prior information was missing. RwrFCAREDPM and RwrFCAREDPMM are not available in Waves 1 and 2.

RwrFCAREHR indicates the number of hours per day the respondent's non-relatives help the respondent with ADL or IADL needs. Respondents are asked, on days their non-relatives help, how many hours per day that is. If the respondent reports less than an hour, then a 1 is recorded. RwrFCAREHR is the sum of hours per day for all non-relative helpers, and so values can be over 24 hours. RwrFCAREHR is calculated as long as there is one non-missing value. RwrFCAREHRM indicates the number of non-relatives who helped the respondent for whom no value of hours was reported and was not accounted for in RwrFCAREHR. RwrFCAREHR is assigned a special missing .w in the AHEAD cohort in Wave 2 if this question is not asked because the respondent's non-relative helpers help less than once per week. RwrFCAREHRM is assigned special missing .m if the respondent was not helped by any non-relatives or prior information was missing. In Wave 2, RwrFCAREHR and RwrFCAREHRM are assigned special missing .q if the respondent participated in the HRS cohort in Wave 2. RwrFCAREHR and RwrFCAREHRM are not available in Wave 1.

RwrFCAREPD indicates whether any of the respondent's non-relative helpers are paid for the care given to the respondent for ADL or IADL needs. RwrFCAREPD is assigned a value of 0 if the respondent receives no care from non-relatives, or the respondent does receive care from non-relatives and none of them are paid. RwrFCAREPD is assigned a value of 1 if the respondent receives care from non-relatives and at least one of them is paid for the care given to the respondent. RwrFCAREPD is assigned a special missing .w in the AHEAD cohort in Wave 2 if this question is not asked because the respondent's non-relative helpers help less than once per week. In Wave 2, RwrFCAREPD is assigned special missing .q if the respondent participated in the HRS cohort in Wave 2. RwrFCAREPD is not available in Wave 1.

SwrFCARE, SwrFCAREN, SwrFCAREDPM, SwrFCAREHR, and SwrFCAREPD indicate whether the respondent's current wave's spouse receives help from non-relatives, the number, the frequency with which, and whether any are paid, and their values are taken from RwrFCARE, RwrFCAREN, RwrFCAREDPM, RwrFCAREHR, and RwrFCAREPD. SwrFCAREDPMM and SwrFCAREHRM indicate the number of non-relatives who helped the respondent's current spouse for whom a value was not reported for the number of days and hours and are taken from RwrFCAREDPMM and RwrFCAREHRM. In addition to the special missing codes employed by the respondent variables, the spouse variables employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Respondents are not asked who helps them with ADLs or IADLs at all in Wave 1 and for the HRS cohort in Wave 2. All variables listed above are not available in Wave 1.

In Wave 2 for those in the AHEAD cohort, respondents are asked to report one person who helps them with each individual ADL that they report someone helping them with. In this wave, respondents are asked whether they are able to do each IADL activity without help, and if not, are asked for the two people who help most often with preparing meals, grocery shopping, making phone calls, and taking medications, and for one person who usually helps manage money if they are not able to manage money without help. Starting in Wave 3, respondents are asked to report up to 7 people who help with ADLs, up to 6 people who help with preparing meals, grocery shopping, making phone calls, and taking medication, and up to 2 people who help with managing money.

In Wave 2, AHEAD respondents are asked whether anyone helps the respondent with each ADL prior to being asked if they have difficulty with each ADL, making this wave not completely comparable with the subsequent waves. To make this wave more comparable with subsequent waves, we have assigned special

missing codes if the respondent reports receiving no help and having no difficulty with the ADL, and if the respondent reports receiving help but having no difficulty with the ADL in Wave 2.

Respondents are asked who helps them with ADLS or IADLS, and whether they are paid starting in the AHEAD cohorts in Wave 2 and Wave 3. As such, RWRFCARE, RWRFCAREN, and RWRFCAREPD are available starting in the AHEAD cohorts in Wave 2 and Wave 3. If the respondent participated in the HRS cohort in Wave 2, then RWRFCARE, RWRFCAREN, and RWRFCAREPD are assigned special missing .q in Wave 2 because they were not asked these questions.

In the AHEAD cohort in Wave 2, respondents can report that a non-relative helps them with ADLS or IADLS, and were asked how frequently and the number of hours that the non-relative provides help. However, the frequency of help is not comparable to other waves and so RWRFCAREDPD and RWRFCAREDPMM are not available in this wave. The number of hours that the non-relative helps is comparable, and so RWRFCAREHR and RWRFCAREHRM are available in this wave. If the respondent participated in the HRS cohort in Wave 2, then RWRFCAREHR and RWRFCAREHRM are assigned special missing .q in Wave 2 because they were not asked this question.

Starting in Wave 3, respondents are asked who helps them with ADLS or IADLS, and are asked about the number of days or number of hours that the respondent's non-relative helps the respondent. As such, RWRFCAREDPD and RWRFCAREDPMM are available beginning in Wave 3.

In the AHEAD cohort in Wave 2, respondents are not asked whether the helper is paid if they help less than once per week. Starting in Wave 3, respondents are asked whether the helper is paid regardless of the frequency of the help.

### HRS Variables Used:

#### RAND HRS:

R10BATHA	r10batha:w10 r any diff-bathing, shower

### How Constructed:

RwRFAANY indicates whether the respondent receives any formal care for difficulties with activities of daily living (ADL) and/or instrumental activities of daily living (IADL). The activities of daily living include dressing, walking across a room, bathing, eating, getting in and out of bed, and using the

toilet. The instrumental activities of daily living include preparing meals, grocery shopping, making phone calls, taking medications, and managing money. In the AHEAD cohort in Wave 2, if the respondent reports having difficulty with an ADL, then they are asked whether someone helps them with that activity, and if so, who helps them with that activity. In this wave, respondents are asked whether they are able to do each IADL activity without help, and if not, are asked for the two people who help most often with preparing meals, grocery shopping, making phone calls, and taking medications, and for one person who usually helps manage money if they are not able to manage money without help. In Waves 3 and onward, if the respondent reports having difficulty with an ADL or IADL, then they are asked whether someone helps them with that activity. If someone helps with the activity, they are asked for the relationships of up to 7 people who help them with ADLs, up to 6 people who help them with IADLs (preparing meals, grocery shopping, making phone calls, and taking medications), and up to 2 people who help them with managing money. The information used to derive this variable is taken from the respondent-level and helper-level HRS helper files.

For the AHEAD cohort in Wave 2, the following relationship is considered to provide formal care: organization/agency. In Waves 3 through 5, the following relationships are considered to provide formal care: professional, employee of institution, and organization. In Waves 6 and onward, the following relationships are considered to provide formal care: organization, employee of institution, paid helper, professional, and specified professional.

RwRFAANY is assigned a value of 0 if the respondent has difficulty with at least one ADL or IADL but receives no help with the activity from a formal caregiver or does not receive any help at all. RwRFAANY is assigned a value of 1 if the respondent has difficulty with at least one ADL or IADL and a formal caregiver helps with at least one of the activities. RwRFAANY is assigned special missing .x if the respondent has no difficulty with any ADLs or IADLs. Respondents in the AHEAD cohort in Wave 2 are not asked who helps them with ADLs if they report receiving help with the ADL some of the time or occasionally (as opposed to most/all of the time), in which case RwRFAANY is assigned special missing .f. These questions are not asked for the HRS cohort in Wave 2, so RwRFAANY is assigned special missing .q in this wave. Don't know, refused, and other missing responses are assigned special missing .d, .r, and .m, respectively. RwRFAANY is assigned a blank missing (.) if the respondent did not participate in the current wave.

SwRFAANY indicates whether the respondent's current wave's spouse receives any formal care for difficulties with ADLs or IADLs, and its values are taken from RwRFAANY. In addition to the special missing codes employed by RwRFAANY, SwRFAANY employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

These questions are not asked at all in Wave 1 and for the HRS cohort in Wave 2.

In the AHEAD cohort in Wave 2, if the respondent reports receiving help with an ADL, then they are asked how frequently they receive help with that activity. If the respondent reports receiving help most/all of the time, then they are asked who helps them with that activity. They are not asked who helps them if they report receiving help some of the time or occasionally. In this wave, respondents are asked whether they are able to do each IADL activity without help, and if not, are asked for the two people who help most often with preparing meals, grocery shopping, making phone calls, and taking medications, and for one person who usually helps manage money if they are not able to manage money without help.

In Waves 3 and onward, if the respondent reports having difficulty with an ADL or IADL, then they are asked whether someone helps them with that activity. If someone helps with the activity, they are asked for the relationships of up to 7 people who help them with ADLs, up to 6 people who help them with IADLs (preparing meals, grocery shopping, making phone calls, and taking medications), and up to 2 people who help them with managing money.

The options for type of relationship change slightly between the AHEAD cohort in Wave 2, Waves 3 through 5, and Waves 6 and onward, but these categories have been combined to keep the definitions as similar as possible between waves for RwRFAANY.

## How Constructed:

The following variables indicate whether paid formal caregivers help the respondent with any ADL or IADL needs. The activities of daily living include dressing, walking across a room, bathing, eating, getting in and out of bed, and using the toilet. The instrumental activities of daily living include preparing meals, grocery shopping, making phone calls, taking medications, and managing money. In the AHEAD cohort in Wave 2, the respondent is first asked whether anyone helps them with each ADL activity, then whether they have difficulty with it, and then who helps if they report receiving help with that activity. In this wave, respondents are asked whether they are able to do each IADL activity without help, and if not, are asked for the two people who help most often with preparing meals, grocery shopping, making phone calls, and taking medications, and for one person who usually helps manage money if they are not able to manage money without help. In Waves 3 and onward, if the respondent reports having difficulty with an ADL or IADL, then they are asked whether someone helps them with that activity. If someone helps with the activity, they are asked for the relationships of up to 7 people who help them with ADLs, up to 6 people who help them with IADLs (preparing meals, grocery shopping, making phone calls, and taking medications), and up to 2 people who help them with managing money. The respondent is asked whether each reported helper is paid, unless that helper is the respondent's spouse or an employee of an institution. The information used to derive these variables is taken from the respondent-level and helper-level HRS helper files.

The following variables are coded as special missing .x if the respondent reports no difficulty with any ADL or IADL, and are coded as special missing .h if the respondent reports difficulty with an ADL or IADL but does not receive any help. For the AHEAD cohort in Wave 2, these variables are assigned special

missing .f if the respondent reports receiving help from someone for difficulties with ADL activities "some of the time" or "occasionally", and not "most (all) of the time". Don't know, refused, or otherwise missing responses are assigned special missing values .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not participate in the current wave.

RwRPF CARE, RwRPF CAREN, RwRPF CAREDPM, RwRPF CAREDPMM, RwRPF CAREHR, and RwRPF CAREHRM include help from an organization/agency if they are reported to be paid for the AHEAD cohort in Wave 2. These variables include help from a professional, employee of institution, and organization if they are reported to be paid in Waves 3 through 5. These variables include help from organizations, paid helpers, professionals, or specified professionals if they are reported to be paid in Wave 6 and onward. These variables also include help from employees of institutions, who are assumed to be paid but are not explicitly asked about in Waves 6 and onward.

RwRPF CARE indicates whether any paid professionals help the respondent with ADL or IADL needs. RwRPF CAREN indicates the number of paid professionals who help the respondent with ADL or IADL needs. RwRPF CARE is coded as 0 if no paid professionals help the respondent with ADLs or IADLs, and is coded as 1 if at least one paid professional helps the respondent with ADLs or IADLs. In Wave 2, RwRPF CARE and RwRPF CAREN are assigned special missing .q if the respondent participated in the HRS cohort in Wave 2. RwRPF CARE and RwRPF CAREN are not available in Wave 1.

RwRPF CAREDPM indicates the number of total days per month paid professionals help the respondent with ADL or IADL needs. This variable comprises converted responses reported in terms of 'Days in last month', 'Days per week', and 'Everyday'. Respondents were allowed to report the amount of time each helper assists in one of the three mentioned frequencies. RwRPF CAREDPM is the sum of days per month for all paid professional helpers, and so values can be over 31 days. RwRPF CAREDPM is calculated as long as there is one non-missing value. If the respondent's only paid professional helper is an employee of an institution, then the respondent is not asked how many days the respondent receives help, and RwRPF CAREDPM is assigned special missing .e starting in Wave 6. RwRPF CAREDPMM indicates the number of paid professionals who helped the respondent for whom no value of days was reported and was not accounted for in RwRPF CAREDPM, including if the respondent is helped by an employee of an institution. RwRPF CAREDPMM is assigned special missing .m if the respondent was not helped by any paid professionals or prior information was missing. RwRPF CAREDPM and RwRPF CAREDPMM are not available in Waves 1 and 2.

RwRPF CAREHR indicates the number of hours per day paid professionals help the respondent with ADL or IADL needs. Respondents are asked, on days paid professionals help, how many hours per day that is. If the respondent reports less than an hour, then a 1 is recorded. RwRPF CAREHR is the sum of hours per day for all paid professional helpers, and so values can be over 24 hours. RwRPF CAREHR is calculated as long as there is one non-missing value. If the respondent's only paid professional helper is an employee of an institution, then the respondent is not asked how many hours the respondent receives help, and RwRPF CAREHR is assigned special missing .e starting in Wave 6. RwRPF CAREHRM indicates the number of paid professionals who helped the respondent for whom no value of hours was reported and was not accounted for in RwRPF CAREHR, including if the respondent is helped by an employee of an institution. RwRPF CAREHRM is assigned special missing .m if the respondent was not helped by any paid professionals or prior information was missing. In Wave 2, RwRPF CAREHR and RwRPF CAREHRM are assigned special missing .q if the respondent participated in the HRS cohort in Wave 2. RwRPF CAREHR and RwRPF CAREHRM are not available in Wave 1.

SwRPF CARE, SwRPF CAREN, SwRPF CAREDPM, and SwRPF CAREHR indicate whether the respondent's current wave's spouse receives help from paid professionals, the number, and the frequency with which, and their values are taken from RwRPF CARE, RwRPF CAREN, RwRPF CAREDPM, and RwRPF CAREHR. SwRPF CAREDPMM and SwRPF CAREHRM indicate the number of paid professionals who helped the respondent's current spouse for whom a value was not reported for the number of days and hours and are taken from RwRPF CAREDPMM and RwRPF CAREHRM. In addition to the special missing codes employed by the respondent variables, the spouse variables employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Respondents are not asked who helps them with ADLs or IADLs at all in Wave 1 and for the HRS cohort in Wave 2. All variables listed above are not available in Wave 1.

In Wave 2 for those in the AHEAD cohort, respondents are asked to report one person who helps them with each individual ADL that they report someone helping them with. In this wave, respondents are asked whether they are able to do each IADL activity without help, and if not, are asked for the two people who help most often with preparing meals, grocery shopping, making phone calls, and taking medications, and for one person who usually helps manage money if they are not able to manage money without help. Starting in Wave 3, respondents are asked to report up to 7 people who help with ADLs, up to 6 people who help with preparing meals, grocery shopping, making phone calls, and taking medication, and up to 2 people who help with managing money.

In Wave 2, AHEAD respondents are asked whether anyone helps the respondent with each ADL prior to being asked if they have difficulty with each ADL, making this wave not completely comparable with the subsequent waves, although the coding has been adjusted to make this wave as comparable as possible.

Respondents are asked who helps them with ADLS or IADLS, and whether they are paid starting in the AHEAD cohorts in Wave 2 and Wave 3. As such, RWRPFCARE and RWRPFCAREN are available starting in the AHEAD cohorts in Wave 2 and Wave 3. If the respondent participated in the HRS cohort in Wave 2, then RWRPFCARE and RWRPFCAREN are assigned special missing .q in Wave 2 because they were not asked these questions.

In the AHEAD cohort in Wave 2, respondents can report that a paid professional helps them with ADLs or IADLs, and were asked how frequently and the number of hours that the paid professional provides help. However, the frequency of help is not comparable to other waves and so RWRPFCAREDPM and RWRPFCAREDPMM are not available in this wave. The number of hours that the paid professional helps is comparable, and so RWRPFCAREHR and RWRPFCAREHRM are available in this wave. If the respondent participated in the HRS cohort in Wave 2, then RWRPFCAREHR and RWRPFCAREHRM are assigned special missing .q in Wave 2 because they were not asked this question.

Starting in Wave 3, respondents are asked who helps them with ADLs or IADLs, and are asked about the number of days or number of hours that a paid professional helps the respondent. As such, RWRPFCAREDPM and RWRPFCAREDPMM are available beginning in Wave 3.

Starting in Wave 6, if the respondent's helper is an employee of an institution, then the respondent is not asked for the number of days or hours that the respondent receives help from that helper, and RWRPFCAREDPM and RWRPFCAREHR are assigned special missing .e if this is the only type of paid professional helper the respondent has.

## How Constructed:

The following variables indicate whether unpaid formal caregivers help the respondent with any ADL or IADL needs. The activities of daily living include dressing, walking across a room, bathing, eating, getting in and out of bed, and using the toilet. The instrumental activities of daily living include preparing meals, grocery shopping, making phone calls, taking medications, and managing money. In the AHEAD cohort in Wave 2, the respondent is first asked whether anyone helps them with each ADL activity, then whether they have difficulty with it, and then who helps if they report receiving help with that activity. In this wave, respondents are asked whether they are able to do each IADL activity without help, and if not, are asked for the two people who help most often with preparing meals, grocery shopping, making phone calls, and taking medications, and for one person who usually helps manage money if they are not able to manage money without help. In Waves 3 and onward, if the respondent reports having difficulty with an ADL or IADL, then they are asked whether someone helps them with that activity. If someone helps with the activity, they are asked for the relationships of up to 7 people who help them with ADLs, up to 6 people who help them with IADLs (preparing meals, grocery shopping, making phone calls, and taking medications), and up to 2 people who help them with managing money. The respondent is asked whether each reported helper is paid, unless that helper is the respondent's spouse or an employee of an institution. The information used to derive these variables is taken from the respondent-level and helper-level HRS helper files.

The following variables are coded as special missing .x if the respondent reports no difficulty with any ADL or IADL, and are coded as special missing .h if the respondent reports difficulty with an ADL or IADL but does not receive any help. For the AHEAD cohort in Wave 2, these variables are assigned special

missing .f if the respondent reports receiving help from someone for difficulties with ADL activities "some of the time" or "occasionally", and not "most (all) of the time". Don't know, refused, or otherwise missing responses are assigned special missing values .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not participate in the current wave.

RwRUF CARE, RwRUF CAREN, RwRUF CAREDPM, RwRUF CAREDPMM, RwRUF CAREHR, and RwRUF CAREHRM include help from an organization/agency if they are reported to not be paid for the AHEAD cohort in Wave 2. These variables include help from a professional, employee of institution, and organization if they are reported to not be paid in Waves 3 through 5. These variables include help from organizations, paid helpers, professionals, or specified professionals if they are reported to not be paid in Wave 6 and onward.

RwRUF CARE indicates whether any unpaid professionals help the respondent with ADL or IADL needs. RwRUF CAREN indicates the number of unpaid professionals who help the respondent with ADL or IADL needs. RwRUF CARE is coded as 0 if no unpaid professionals help the respondent with ADLs or IADLs, and is coded as 1 if at least one unpaid professional helps the respondent with ADLs or IADLs. In Wave 2, RwRUF CARE and RwRUF CAREN are assigned special missing .q if the respondent participated in the HRS cohort in Wave 2. RwRUF CARE and RwRUF CAREN are not available in Wave 1.

RwRUF CAREDPM indicates the number of total days per month unpaid professionals help the respondent with ADL or IADL needs. This variable comprises converted responses reported in terms of 'Days in last month', 'Days per week', and 'Everyday'. Respondents were allowed to report the amount of time each helper assists in one of the three mentioned frequencies. RwRUF CAREDPM is the sum of days per month for all unpaid professional helpers, and so values can be over 31 days. RwRUF CAREDPM is calculated as long as there is one non-missing value. RwRUF CAREDPMM indicates the number of unpaid professionals who helped the respondent for whom no value of days was reported and was not accounted for in RwRUF CAREDPM. RwRUF CAREDPMM is assigned special missing .m if the respondent was not helped by any unpaid professionals or prior information was missing. RwRUF CAREDPM and RwRUF CAREDPMM are not available in Waves 1 and 2.

RwRUF CAREHR indicates the number of hours per day unpaid professionals help the respondent with ADL or IADL needs. Respondents are asked, on days unpaid professionals help, how many hours per day that is. If the respondent reports less than an hour, then a 1 is recorded. RwRUF CAREHR is the sum of hours per day for all unpaid professional helpers, and so values can be over 24 hours. RwRUF CAREHR is calculated as long as there is one non-missing value. RwRUF CAREHRM indicates the number of unpaid professionals who helped the respondent for whom no value of hours was reported and was not accounted for in RwRUF CAREHR. RwRUF CAREHRM is assigned special missing .m if the respondent was not helped by any unpaid professionals or prior information was missing. In Wave 2, RwRUF CAREHR and RwRUF CAREHRM are assigned special missing .q if the respondent participated in the HRS cohort in Wave 2. RwRUF CAREHR and RwRUF CAREHRM are not available in Wave 1.

SwRUF CARE, SwRUF CAREN, SwRUF CAREDPM, and SwRUF CAREHR indicate whether the respondent's current wave's spouse receives help from unpaid professionals, the number, and the frequency with which, and their values are taken from RwRUF CARE, RwRUF CAREN, RwRUF CAREDPM, and RwRUF CAREHR. SwRUF CAREDPMM and SwRUF CAREHRM indicate the number of unpaid professionals who helped the respondent's current spouse for whom a value was not reported for the number of days and hours and are taken from RwRUF CAREDPMM and RwRUF CAREHRM. In addition to the special missing codes employed by the respondent variables, the spouse variables employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Respondents are not asked who helps them with ADLs or IADLs at all in Wave 1 and for the HRS cohort in Wave 2. All variables listed above are not available in Wave 1.

In Wave 2 for those in the AHEAD cohort, respondents are asked to report one person who helps them with each individual ADL that they report someone helping them with. In this wave, respondents are asked whether they are able to do each IADL activity without help, and if not, are asked for the two people who help most often with preparing meals, grocery shopping, making phone calls, and taking medications, and for one person who usually helps manage money if they are not able to manage money without help. Starting in Wave 3, respondents are asked to report up to 7 people who help with ADLs, up to 6 people who help with preparing meals, grocery shopping, making phone calls, and taking medication, and up to 2 people who help with managing money.

In Wave 2, AHEAD respondents are asked whether anyone helps the respondent with each ADL prior to being asked if they have difficulty with each ADL, making this wave not completely comparable with the subsequent waves, although the coding has been adjusted to make this wave as comparable as possible.

Respondents are asked who helps them with ADLs or IADLs, and whether they are paid starting in the AHEAD cohorts in Wave 2 and Wave 3. As such, RWRUFCARE and RWRUFCAREN are available starting in the AHEAD cohorts in Wave 2 and Wave 3. If the respondent participated in the HRS cohort in Wave 2, then RWRUFCARE and RWRUFCAREN are assigned special missing .q in Wave 2 because they were not asked these questions.

In the AHEAD cohort in Wave 2, respondents can report that an unpaid professional helps them with ADLs or IADLs, and were asked how frequently and the number of hours that the unpaid professional provides help. However, the frequency of help is not comparable to other waves and so RWRUFCAREDPM and RWRUFCAREDPMM are not available in this wave. The number of hours that the unpaid professional helps is comparable, and so RWRUFCAREHR and RWRUFCAREHRM are available in this wave. If the respondent participated in the HRS cohort in Wave 2, then RWRUFCAREHR and RWRUFCAREHRM are assigned special missing .q in Wave 2 because they were not asked this question.

Starting in Wave 3, respondents are asked who helps them with ADLs or IADLs, and are asked about the number of days or number of hours that an unpaid professional helps the respondent. As such, RWRUFCAREDPM and RWRUFCAREDPMM are available beginning in Wave 3.

**How Constructed:**

The following variables indicate whether a paid helper helps the respondent with any ADL or IADL needs. The activities of daily living include dressing, walking across a room, bathing, eating, getting in and out of bed, and using the toilet. The instrumental activities of daily living include preparing meals, grocery shopping, making phone calls, taking medications, and managing money. In the AHEAD cohort in Wave 2, the respondent is first asked whether anyone helps them with each ADL activity, then whether they have difficulty with it, and then who helps if they report receiving help with that activity. In this wave, respondents are asked whether they are able to do each IADL activity without help, and if not, are asked for the two people who help most often with preparing meals, grocery shopping, making phone calls, and taking medications, and for one person who usually helps manage money if they are not able to manage money without help. In Waves 3 and onward, if the respondent reports having difficulty with an ADL or IADL, then they are asked whether someone helps them with that activity. If someone helps with the activity, they are asked for the relationships of up to 7 people who help them with ADLs, up to 6 people who help them with IADLs (preparing meals, grocery shopping, making phone calls, and taking medications), and up to 2 people who help them with managing money. The respondent is asked whether each reported helper is paid, unless that helper is the respondent's spouse or an employee of an institution. The information used to derive these variables is taken from the respondent-level and helper-level HRS helper files.

The following variables are coded as special missing .x if the respondent reports no difficulty with any ADL or IADL, and are coded as special missing .h if the respondent reports difficulty with an ADL or IADL but does not receive any help. They are coded as special missing .s if the respondent's spouse is the only person who helps with ADL or IADL difficulties. For the AHEAD cohort in Wave 2, these variables are assigned special missing .f if the respondent reports receiving help from someone for difficulties with ADL activities "some of the time" or "occasionally", and not "most (all) of the time". Don't know, refused, or otherwise missing responses are assigned special missing values .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not participate in the current wave.

RwHLPPDN indicates the number of helpers who are paid to help the respondent with ADL or IADL needs. This question is asked for every helper the respondent reported helped them (children and grandchildren, relatives, non-relatives, and professionals), but is not asked for help from spouses or from employees of an institution starting in Wave 6. Employees of institutions are included in the count of helpers who are paid to help the respondent. In the AHEAD cohort in Wave 2, if the respondent is helped less than once per week, then the question is not asked and RwHLPPDN is assigned special missing .w in Wave 2. In Wave 2, RwHLPPDN is assigned special missing .q if the respondent participated in the HRS cohort in Wave 2. RwHLPPDN is not available in Wave 1.

SwHLPPDN indicates the number of helpers who are paid to help the respondent's current wave's spouse and is taken directly from RwHLPPDN. In addition to the special missing codes employed by RwHLPPDN, SwHLPPDN employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwHLPPDIN indicates the number of paid helpers for ADLs or IADLs for whom Medicaid, the state's version of Medicaid, or insurance helps pay for. RwHLPPDIN is assigned a value of 0 if the respondent has no paid helpers for ADLs or IADLs. This question is asked for every helper the respondent reported was paid to help them (children and grandchildren, relatives, non-relatives, and professionals), but is not asked for help from spouses or from employees of an institution starting in Wave 6. As such, if the respondent's only helper is their spouse, then special missing .s is assigned, and if the respondent's only helper is an employee of an institution, then special missing .e is assigned. In the AHEAD cohort in Wave 2, if the respondent is helped less than once per week, then the question is not asked and RwHLPPDIN is assigned special missing .w in Wave 2. In Wave 2, RwHLPPDIN is assigned special missing .q if the respondent participated in the HRS cohort in Wave 2. RwHLPPDIN is not available in Wave 1.

SwHLPPDIN indicates the number of paid helpers of the respondent's current wave's spouse for whom Medicaid, the state's version of Medicaid, or insurance helps pay for and is taken directly from RwHLPPDIN. In addition to the special missing codes employed by RwHLPPDIN, SwHLPPDIN employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwHLPPDAMT indicates the total monthly out-of-pocket cost for the respondent's paid caregiving for ADLs or IADLs. RwHLPPDAMT is the sum of the out-of-pocket monthly costs paid for all paid helpers. RwHLPPDAMT is assigned a value of 0 if the respondent has no paid helpers for ADLs or IADLs. The amount the

respondent and their spouse paid for each caregiver (not accounting expenses paid by Medicaid, the state's version of Medicaid, or insurance) is asked for every paid helper the respondent reported helped them (children and grandchildren, relatives, non-relatives, and professionals), but is not asked for help from spouses or from employees of an institution starting in Wave 6. As such, if the respondent's only helper is their spouse, then special missing .s is assigned, and if the respondent's only helper is an employee of an institution, then special missing .e is assigned. In the AHEAD cohort in Wave 2, if the respondent is helped less than once per week, then the question is not asked and RwHLPPDAMT is assigned special missing .w in Wave 2. RwHLPPDAMTM indicates the number of paid helpers who helped the respondent for whom no amount of out-of-pocket cost was reported and was not accounted for in RwHLPPDAMT, including if the helper was the respondent's spouse or an employee of an institution. In Wave 2, RwHLPPDAMT is assigned special missing .q if the respondent participated in the HRS cohort in Wave 2. RwHLPPDAMT is not available in Wave 1.

SwHLPPDAMT indicates the total monthly out-of-pocket cost for the respondent's current wave's spouse's paid caregiving, and its values are taken from RwHLPPDAMT. SwHLPPDAMTM indicates the number of paid helpers who helped the respondent's current spouse for whom no amount of out-of-pocket cost was reported and is taken from RwHLPPDAMTM. In addition to the special missing codes employed by RwHLPPDAMT and RwHLPPDAMTM, SwHLPPDAMT and SwHLPPDAMTM employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

### Cross Wave Differences in HRS

Respondents are not asked who helps them with ADLs or IADLs at all in Wave 1 and for the HRS cohort in Wave 2. All variables listed above are not available in Wave 1.

In Wave 2 for those in the AHEAD cohort, respondents are asked to report one person who helps them with each individual ADL that they report someone helping them with. In this wave, respondents are asked whether they are able to do each IADL activity without help, and if not, are asked for the two people who help most often with preparing meals, grocery shopping, making phone calls, and taking medications, and for one person who usually helps manage money if they are not able to manage money without help. Starting in Wave 3, respondents are asked to report up to 7 people who help with ADLs, up to 6 people who help with preparing meals, grocery shopping, making phone calls, and taking medication, and up to 2 people who help with managing money.

In Wave 2, AHEAD respondents are asked whether anyone helps the respondent with each ADL prior to being asked if they have difficulty with each ADL, making this wave not completely comparable with the subsequent waves, although the coding has been adjusted to make this wave as comparable as possible.

Only in the AHEAD cohort in Wave 2, the respondent is not asked these questions if their helper helps less than once per week. In this wave, RwHLPPDN, RwHLPPDIN, and RwHLPPDAMT are assigned special missing .w in Wave 2 if the respondent is not asked these questions because their helper helps less than once per week.

Respondents are asked who helps them with ADLs or IADLs starting in the AHEAD cohorts in Wave 2 and Wave 3. As such, RwHLPPDN, RwHLPPDIN, RwHLPPDAMT, and RwHLPPDAMTM are available starting in the AHEAD cohorts in Wave 2 and Wave 3. If the respondent participated in the HRS cohort in Wave 2, then RwHLPPDN, RwHLPPDIN, RwHLPPDAMT, and RwHLPPDAMTM are assigned special missing .q in Wave 2 because they were not asked this question.

In all available waves, the respondent is not asked these questions if their spouse is their only helper, and these variables are assigned special missing .s. The respondent is also not asked these questions if their only helper is an employee of an institution starting in Wave 6, in which case, these helpers are added to the count of paid helpers in RwHLPPDN, are assigned special missing .e in RwHLPPDIN and RwHLPPDAMT, and add to the count of missing values in RwHLPPDAMTM.

### How Constructed:

RwSATJOB indicates how much the respondent agrees that they are satisfied with their job, all things considered.

RwDEMAND indicates how much the respondent agrees that their job is physically demanding.

RwDESERVE indicates how much the respondent agrees that they receive the recognition they deserve from work.

RwSALARY indicates how much the respondent agrees that their salary is adequate.

RwPROMOT indicates how much the respondent agrees that their job promotion prospects are poor.

RwSECURE indicates how much the respondent agrees that their job security is poor.

RwTIMEPRE indicates how much the respondent agrees that their job is under constant time pressure due to a heavy workload.

RwLTLFREE indicates how much the respondent agrees that they have very little freedom to decide how to do the work.

RwNSKILLS indicates how much the respondent agrees that they have the opportunity to develop new skills.

RwSUPPORT indicates how much the respondent agrees that they receive adequate support in difficult situations.

RwCONTROL indicates how much the respondent agrees that they feel they have control over what happens in most situations at work.

RwWORKFAST indicates how much the respondent agrees that they have to work very fast after considering the things they have to do at work.

RwUPSET indicates how much the respondent agrees that they often feel bothered or upset by their work.

RwNCONFLIC indicates how much the respondent agrees that they are free from conflicting demands that others make in their work.

RwINTERF indicates how much the respondent agrees that their job interferes with their personal life.

These variables are coded so that a higher score indicates a higher level of stress from their job. RwsATJOB, RwsDESERVE, RwsSALARY, RwsNSKILLS, RwsSUPPORT, RwsCONTROL, and RwsNCONFLIC are coded as follows: 1.strongly agree, 2.agree, 3.disagree, 4.strongly disagree. RwsDEMAND, RwsPROMOT, RwsSECURE, RwsTIMEPRE, RwsLTLFREE, RwsWORKFAST, RwsUPSET, and RwsINTERF are coded as follows: 1.strongly disagree, 2.disagree, 3.agree, 4.strongly agree. Special missing .w is assigned if the respondent indicates they are not currently working. Special missing .c is assigned if the respondent is either not eligible for or did not complete the leave behind questionnaire. Special missing .a is assigned if the respondent reports that the statement does not apply to them. Special missing .e is assigned if the respondent answered the question when they reported not working. Special missing .m is assigned if the respondent is eligible for and completed the leave behind questionnaire but their response for the question is missing. These variables are assigned plain missing (.) if the respondent did not participate in the current wave.

SwSATJOB, SwDEMAND, SwDESERVE, SwSALARY, SwPROMOT, SwSECURE, SwTIMEPRE, SwLTLFREE, SwNSKILLS, SwSUPPORT, SwCONTROL, SwWORKFAST, SwUPSET, SwNCONFLIC and SwINTERF indicate the current wave's spouse's level of agreement with statements about their job and are taken from the spouse's values to RwsATJOB, RwsDEMAND, RwsDESERVE, RwsSALARY, RwsPROMOT, RwsSECURE, RwsTIMEPRE, RwsLTLFREE, RwsNSKILLS, RwsSUPPORT, RwsCONTROL, RwsWORKFAST, RwsUPSET, RwsNCONFLIC and RwsINTERF. In addition to the special missing codes used in RwsATJOB, RwsDEMAND, RwsDESERVE, RwsSALARY, RwsPROMOT, RwsSECURE, RwsTIMEPRE, RwsLTLFREE, RwsNSKILLS, RwsSUPPORT, RwsCONTROL, RwsWORKFAST, RwsUPSET, RwsNCONFLIC and RwsINTERF, SwSATJOB, SwDEMAND, SwDESERVE, SwSALARY, SwPROMOT, SwSECURE, SwTIMEPRE, SwLTLFREE, SwNSKILLS, SwSUPPORT, SwCONTROL, SwWORKFAST, SwUPSET, SwNCONFLIC and SwINTERF employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwJOBSUM indicates the mean of the six different job stress questions (RwsATJOB, RwsDEMAND, RwsSALARY, RwsSECURE, RwsTIMEPRE and RwsNSKILLS) and can be used as a summary score. RwJOBSUM is coded so that higher scores indicate more stress that the respondent feels about their job. RwJOBSUM is calculated for any respondent with at least one non-missing value for its six components. RwJOBSUMM counts the number of components with missing values in RwJOBSUM, which could be between no missing components (0) and six missing components (6). Special missing .w is assigned to RwJOBSUM and RwJOBSUMM if the respondent indicates they are not currently working. Special missing .c is assigned to RwJOBSUM and RwJOBSUMM if the respondent is either not eligible for or did not complete the leave behind questionnaire. Special missing .a is assigned to RwJOBSUM if the respondent reports that the statement does not apply to them. Special missing .e is assigned to RwJOBSUM if the respondent answered the question when they reported not working. Special missing .m is assigned to RwJOBSUM if the respondent is eligible for and completed the leave behind questionnaire but their response for the question is missing. These variables are assigned plain missing (.) if the respondent did not participate in the current wave.

SwJOBSUM and SwJOBSUMM indicate the mean summary score of six different job stress questions and the count of any missing components in that score for the current wave's spouse and is taken from the spouse's values to RwJOBSUM and RwJOBSUMM. In addition to the special missing codes used in RwJOBSUM and RwJOBSUMM, SwJOBSUM and SwJOBSUMM employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

The Karasek Job Content questions were added to the HRS survey starting at Wave 8.

Starting in Wave 9, "Does not apply" is available as an option for the question "The demands of my job interfere with my personal life."

Starting in Wave 10, HRS added one more option, "Does not apply", for the respondent to select for all statements.

RwsATJOB, which indicates how much the respondent agrees that they are satisfied with their job all things considered, is the only question asked starting in Wave 12. Thus, RwJOBSUM is not able to be generated starting in Wave 12.

## HRS Variables Used:

## Wave 8:

KLB045 q45. currently working  
 KLB050A q50a. satisfied with job  
 KLB050B q50b. job is physically demanding  
 KLB050C q50c. recognition for work  
 KLB050D q50d. salary is adequate  
 KLB050E q50e. job promotion prospects are poor  
 KLB050F q50f. job security is poor  
 KLB050G q50g. pressure due to a heavy workload  
 KLB050H q50h. little freedom how work done  
 KLB050I q50i. opportunity to develop new skills  
 KLB050J q50j. adequate support in diff situ  
 KLB050K q50k. have control over what happens  
 KLB050L q50l. have to work very fast  
 KLB050M q50m. feel bothered or upset in work  
 KLB050N q50n. free from conflictiong demands  
 KLB050O q50o. job interferes with personal life  
 KLBCOMP mode completed leave behind qnaire

## Wave 9:

LLB045 q45. currently working  
 LLB050A q50a. satisfied with job  
 LLB050B q50b. job is physically demanding  
 LLB050C q50c. recognition for work  
 LLB050D q50d. salary is adequate  
 LLB050E q50e. job promotion prospects are poor  
 LLB050F q50f. job security is poor  
 LLB050G q50g. pressure due to a heavy workload  
 LLB050H q50h. little freedom how work done  
 LLB050I q50i. opportunity to develop new skills  
 LLB050J q50j. adequate support in diff situ  
 LLB050K q50k. have control over what happens  
 LLB050L q50l. have to work very fast  
 LLB050M q50m. feel bothered or upset in work  
 LLB050N q50n. free from conflictiong demands  
 LLB050O q50o. job interferes with personal life  
 LLBCOMP mode completed leave behind qnaire

## Wave 10:

MLB045 q45. currently working  
 MLB050A q50a. satisfied with job  
 MLB050B q50b. job is physically demanding  
 MLB050C q50c. recognition for work  
 MLB050D q50d. salary is adequate  
 MLB050E q50e. job promotion prospects are poor  
 MLB050F q50f. job security is poor  
 MLB050G q50g. pressure due to a heavy workload  
 MLB050H q50h. little freedom how work done  
 MLB050I q50i. opportunity to develop new skills  
 MLB050J q50j. adequate support in diff situ  
 MLB050K q50k. have control over what happens  
 MLB050L q50l. have to work very fast  
 MLB050M q50m. feel bothered or upset in work  
 MLB050N q50n. free from conflictiong demands  
 MLB050O q50o. job interferes with personal life  
 MLBCOMP mode completed leave behind qnaire

## Wave 11:

NLB079 q79. currently working  
 NLB084A q84a. satisfied with job  
 NLB084B q84b. job is physically demanding  
 NLB084C q84c. recognition for work  
 NLB084D q84d. salary is adequate  
 NLB084E q84e. job promotion prospects are poor  
 NLB084F q84f. job security is poor  
 NLB084G q84g. pressure due to a heavy workload

NLB084H	q84h. little freedom how work done
NLB084I	q84i. opportunity to develop new skills
NLB084J	q84j. adequate support in diff situ
NLB084K	q84k. have control over what happens
NLB084L	q84l. have to work very fast
NLB084M	q84m. feel bothered or upset in work
NLB084N	q84n. free from conflictiong demands
NLB084O	q84o. job interferes with personal life
NLBCOMP	mode completed leave behind qnaire
Wave 12:	
OLB072	q72. currently working
OLB076	q76. satisfied with job
OLBCOMP	mode completed leave behind qnaire
Wave 13:	
PLB072	q72. currently working

## How Constructed:

Neighborhood physical disorder/neighborhood social cohesion questions were asked to respondents to learn about their feelings regarding their local area, that is, everywhere within a 20 minute walk or about a mile of their home. Starting in Wave 8, respondents are presented with two statements, one negative and one positive (e.g. "I really feel part of this area" and "I feel that I don't belong in this area"). Of the 8 questions, five of the positive statements are on the left and 3 of the positive statements are on the right. In between the two statements respondents were asked to mark an answer on a scale of 1 to 7 indicating how closely they agree with either statement. After Wave 8, respondents are given a positive statement on the left and a negative statement on the right for each question. To account for the difference of the three Wave 8 questions with right-sided positive statements, these questions are recoded to agree with all other questions and waves so that, for all variables, a report of 1 means the respondent most closely agrees with the positive statement and a report of 7 indicates the respondent most closely agrees with the negative statement.

RwBELONG indicates how much the respondent feels that they are part of/don't belong in this area.

RwVANDAL indicates how much the respondent feels vandalism and graffiti are no problem/a big problem in this area. This question had a right-sided positive statement in Wave 8 which was reverse-coded in R8VANDAL to be consistent with all other waves.

RwTRUST indicates how much the respondent feels that most people in this area can/can't be trusted.

RwAFWALK indicates how much the respondent feels safe/afraid walking alone in this area after dark. This question had a right-sided positive statement in Wave 8 which was reverse-coded in R8AFWALK to be consistent with all other waves.

RwUNFRIEND indicates how much the respondent feels most people are friendly/unfriendly in this area.

RwRUBBISH indicates how much the respondent feels this area is kept clean/always full of rubbish and litter.

RwHLPNTR indicates how much the respondent feels if they were in trouble there are lots of people/nobody would help in this area.

RwVACANT indicates how much the respondent feels there are no/many vacant or deserted houses or storefronts in this area. This question had a right-sided positive statement in Wave 8 which was reverse-coded in R8VACANT to be consistent with all other waves.

For RwBELONG, RwVANDAL, RwTRUST, RwAFWALK, RwUNFRIEND, RwRUBBISH, RwHLPNTR and RwVACANT, special missing .c is assigned if the respondent is either not eligible for or did not complete the leave behind questionnaire. Special missing .m is assigned if the respondent is eligible for and completed the leave behind questionnaire but their response for the question is missing. These variables are assigned plain missing (.) if the respondent did not participate in the current wave.

SwBELONG, SwVANDAL, SwTRUST, SwAFWALK, SwUNFRIEND, SwRUBBISH, SwHLPNTR and SwVACANT indicate the current wave's spouse's feelings about statements about their neighborhood and are taken from the spouse's values to RwBELONG, RwVANDAL, RwTRUST, RwAFWALK, RwUNFRIEND, RwRUBBISH, RwHLPNTR and RwVACANT. In addition to the special missing codes used in RwBELONG, RwVANDAL, RwTRUST, RwAFWALK, RwUNFRIEND, RwRUBBISH, RwHLPNTR and RwVACANT, SwBELONG, SwVANDAL, SwTRUST, SwAFWALK, SwUNFRIEND, SwRUBBISH, SwHLPNTR and SwVACANT employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwNPDISUM is the calculation of the mean of four neighborhood physical disorder questions and can be used as a summary score. RwNPDISUM is calculated as:  $RwNPDISUM = \text{mean}(RwVANDAL \text{ } RwAFWALK \text{ } RwRUBBISH \text{ } RwVACANT)$ . RwNPDISUM is calculated for any respondent with at least one non-missing value for its four components. RwNPDISUMM counts the number of components with missing values in RwNPDISUM and its values can range from zero (0) to four (4). Special missing .c is assigned to RwNPDISUM and RwNPDISUMM if the respondent is either not eligible for or did not complete the leave behind questionnaire. Special missing .m is assigned to RwNPDISUM if the respondent is eligible for and completed the leave behind questionnaire but

their response for the question is missing. These variables are assigned plain missing (.) if the respondent did not participate in the current wave.

SwNPDISUM and SwNPDISUMM indicate the summary score of the mean of four different neighborhood physical disorder questions and the count of any missing components in that score for the current wave's spouse and are taken from the spouse's values to RwnPDISUM and RwnPDISUMM. In addition to the special missing codes used in RwnPDISUM and RwnPDISUMM, SwNPDISUM and SwNPDISUMM employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwNSOCOSUM is the calculation of the mean of four neighborhood social cohesion questions and can be used as a summary score. RwNSOCOSUM is calculated as:  $RwNSOCOSUM = \text{mean}(RwBELONG\ RwTRUST\ RwUNFRIEND\ RwHLPNTR)$ . RwNSOCOSUM is calculated for any respondent with at least one non-missing value for its four components. RwNSOCOSUMM counts the number of components with missing values in RwNSOCOSUM and its values range from zero (0) to four (4). Special missing .c is assigned to RwNSOCOSUM and RwNSOCOSUMM if the respondent is either not eligible for or did not complete the leave behind questionnaire. Special missing .m is assigned to RwNSOCOSUM if the respondent is eligible for and completed the leave behind questionnaire but their response for the question is missing. These variables are assigned plain missing (.) if the respondent did not participate in the current wave.

SwNSOCOSUM and SwNSOCOSUMM indicate the summary score of the mean of four different neighborhood social cohesion questions and the count of any missing components in that score for the current wave's spouse and are taken from the spouse's values to SwNSOCOSUM and SwNSOCOSUMM. In addition to the special missing codes used in SwNSOCOSUM and SwNSOCOSUMM, SwNSOCOSUM and SwNSOCOSUMM employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Neighborhood physical disorder/social cohesion questions are asked starting in Wave 8.

Unlike other questions in Wave 8 which have the positive statement on the left, how much the respondents feel vandalism and graffiti are no problem/a big problem in this area, how much the respondents feel safe/afraid walking alone in this area after dark, and how much the respondents feel there are no/many vacant or deserted houses or storefronts in this area have the positive statement on the right. In all other waves, for all questions the positive statement is always on the left. For the sake of cross-wave consistency, R8VANDAL, R8AFWALK, and R8VACANT in the Harmonized HRS have been reverse-coded to be consistent and comparable with all other waves.

## HRS Variables Used:

### Wave 8:

KLB021A	q21a. feel part of this area
KLB021B	q21b. vandalism and graffiti problem
KLB021C	q21c. most people can be trusted
KLB021D	q21d. be afraid to walk alone after dark
KLB021E	q21e. most people are friendly this area
KLB021F	q21f. this area is kept very clean
KLB021G	q21g. people help you if in trouble
KLB021H	q21h. many vacant or deserted houses
KLBCOMP	mode completed leave behind qnaire

### Wave 9:

LLB021A	q21a. feel part of this area
LLB021B	q21b. vandalism and graffiti problem
LLB021C	q21c. most people can be trusted
LLB021D	q21d. be afraid to walk alone after dark
LLB021E	q21e. most people are friendly this area
LLB021F	q21f. this area is kept very clean
LLB021G	q21g. people help you if in trouble
LLB021H	q21h. many vacant or deserted houses

LLBCOMP mode completed leave behind qnaire

Wave 10:

MLB021A q21a. feel part of this area  
MLB021B q21b. vandalism and graffiti problem  
MLB021C q21c. most people can be trusted  
MLB021D q21d. be afraid to walk alone after dark  
MLB021E q21e. most people are friendly this area  
MLB021F q21f. this area is kept very clean  
MLB021G q21g. people help you if in trouble  
MLB021H q21h. many vacant or deserted houses  
MLBCOMP mode completed leave behind qnaire

Wave 11:

NLB021A q21a. feel part of this area  
NLB021B q21b. vandalism and graffiti problem  
NLB021C q21c. most people can be trusted  
NLB021D q21d. be afraid to walk alone after dark  
NLB021E q21e. most people are friendly this area  
NLB021F q21f. this area is kept very clean  
NLB021G q21g. people help you if in trouble  
NLB021H q21h. many vacant or deserted houses  
NLBCOMP mode completed leave behind qnaire

Wave 12:

OLB020A q20a. feel part of this area  
OLB020B q20b. vandalism and graffiti problem  
OLB020C q20c. most people can be trusted  
OLB020D q20d. be afraid to walk alone after dark  
OLB020E q20e. most people are friendly this area  
OLB020F q20f. this area is kept very clean  
OLB020G q20g. people help you if in trouble  
OLB020H q20h. many vacant or deserted houses  
OLBCOMP mode completed leave behind qnaire

Wave 13:

PLB020A q20a. feel part of this area  
PLB020B q20b. vandalism and graffiti problem  
PLB020C q20c. most people can be trusted  
PLB020D q20d. be afraid to walk alone after dark  
PLB020E q20e. most people are friendly this area  
PLB020F q20f. this area is kept very clean  
PLB020G q20g. people help you if in trouble  
PLB020H q20h. many vacant or deserted houses  
PLBCOMP mode completed leave behind qnaire

Wave 14:

QLB020A q20a. feel part of this area  
QLB020B q20b. vandalism and graffiti problem  
QLB020C q20c. most people can be trusted  
QLB020D q20d. afraid walk alone after dark  
QLB020E q20e. most people friendly this area  
QLB020F q20f. this area kept very clean  
QLB020G q20g. people help you if in trouble  
QLB020H q20h. many vacant/deserted houses  
QLBCOMP mode completed leave behind qnaire

Wave 15:

RLB020A q20a. feel part of this area  
RLB020B q20b. vandalism and graffiti problem  
RLB020C q20c. most people can be trusted  
RLB020D q20d. afraid walk alone after dark  
RLB020E q20e. most people friendly this area  
RLB020F q20f. this area kept very clean  
RLB020G q20g. people help you if in trouble  
RLB020H q20h. many vacant/deserted houses  
RLBCOMP mode completed leave behind qnaire

### How Constructed:

Many of the questions in this section are asked of the same respondent in more than one wave. Sometimes the values in each wave do not agree. Wave-specific variables are as reported, whereas summary variables are as described below.

RAMISCHLTH indicates whether the respondent missed a month or more of school before age 16 because of a health condition.

RwPABUSED indicates whether the respondent was physically abused by either of their parents before age 18.

RwPADRUG indicates whether either of the respondent's parents drank or used drugs so often that it caused problems in the family before age 18.

RwNADISE indicates whether the respondent has ever been in a major fire, flood, earthquake or other natural disaster.

RwCOMBATE indicates whether the respondent has ever fired a weapon in combat or been fired upon in combat.

RwATTACKE indicates whether the respondent was a victim of a serious physical attack or assault.

RwLIFETHE indicates whether the respondent has ever had a life-threatening illness or accident.

RwCHDEATHE indicates whether the respondent has experienced the death of their own child.

RwLIFETHCSE indicates whether the respondent's spouse or a child has ever had a life-threatening illness or accident.

RwDRUGCSE indicates whether the respondent's spouse, partner, or child has ever been addicted to drugs or alcohol.

RwPOLICE indicates whether the respondent has been in trouble with the police before the age of 18.

RAMISCHLTH, RWPABUSED, RWPADRUG, RWNADISE, RWCOMBATE, RWATTACKE, RWLIFETHE, RWCHDEATHE, RWLIFETHCSE, RWDRUGCSE, and RWPOLICE are given a code of 1 if the respondent experienced the event. A code of 0 is assigned if the respondent did not experience the event. Special missing .c is assigned if the respondent is either not eligible for or did not complete the leave behind questionnaire. Special missing .a is assigned to RAMISCHLTH if the respondent was not interviewed when the question was asked. Special missing .n is assigned for RWATTACKE, RWLIFETHE, RWCHDEATHE, and RWLIFETHCSE in Wave 7 when the question is skipped because the respondent was only asked to answer the disability questionnaire and not the psychosocial questionnaire. Starting in Wave 9, special missing .s is assigned to RAMISCHLTH if the respondent is not asked this question because they participated in the 2006 internet survey. Special missing .d and .r are assigned when the respondent responded to the question with "don't know" and refused to answer, respectively. Special missing .m is assigned if the respondent is eligible for and completed the leave behind questionnaire but their response for the question is missing. Plain missing (.) is assigned if the respondent is not the wave.

SwMISCHLTH, SwPABUSED, SwPADRUG, SwNADISE, SwCOMBATE, SwATTACKE, SwLIFETHE, SwCHDEATHE, SwLIFETHCSE, SwDRUGCSE, and SwPOLICE indicate the respondent's current wave's spouse's experience with lifetime stressful experiences, and their values are taken from RAMISCHLTH, RWPABUSED, RWPADRUG, RWNADISE, RWCOMBATE, RWATTACKE, RWLIFETHE, RWCHDEATHE, RWLIFETHCSE, RWDRUGCSE, and RWPOLICE. In addition to the special missing codes used in the respondent variables, the spouse variables employ two additional special missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RALSEVENT is the count of how many lifetime stressful events the respondent experienced. The count is based on the latest report of whether the respondent has ever been in a major fire, flood, earthquake or other natural disaster (RWNADISE), whether the respondent has ever fired a weapon in combat or been fired upon in combat (RWCOMBATE), whether the respondent was a victim of a serious physical attack or assault (RWATTACKE), whether the respondent ever had a life-threatening illness or accident (RWLIFETHE), whether the respondent has experienced the death of their own child (RWCHDEATHE), whether the respondent's spouse or a child has ever had a life-threatening illness or accident (RWLIFETHCSE), and whether the respondent's spouse, partner, or child has ever been addicted to drugs or alcohol (RWDRUGCSE). RALSEVENT is calculated as long as one of the component variables is non-missing. RALSEVENTM is the count of missing components in RALSEVENT, which could be between no missing components (0) and seven missing components (7). Special missing .c is assigned to RALSEVENT and RALSEVENTM if the respondent is either not eligible for or did not complete the leave behind questionnaire. Special missing .m is assigned to RALSEVENT if all seven components of this count are missing.

SwLSEVENT and SwLSEVENTM are the count of how many lifetime stressful events and the count of missing components for the current wave's spouse, and their values are taken from RALSEVENT and RALSEVENTM. In addition to the special missing codes used in RALSEVENT and RALSEVENTM, SwLSEVENT and SwLSEVENTM employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed. Plain missing (.) is assigned to SwLSEVENT and SwLSEVENTM if the respondent's spouse is not the wave.

RACSEVENT is the count of how many stressful events the respondent experienced by the age of 18. The count is based on the earliest report of whether the respondent was in trouble with the police before the age of 18 (RwPOLICE), whether either of the respondent's parents drank or used drugs so often that it caused problems in the family before age 18 (RwPADRUG), and whether the respondent was physically abused by either of their parents before age 18 (RwPABUSED). RACSEVENT is calculated as long as one of the component variables is non-missing. RACSEVENTM is the count of missing components in RACSEVENT, which could be between no missing components (0) and three missing components (3). Special missing .c is assigned to RACSEVENT and RACSEVENTM if the respondent is either not eligible for or did not complete the leave behind questionnaire. Special missing .m is assigned to RACSEVENT if all three components of this count were missing.

SwCSEVENT and SwCSEVENTM are the count of how many childhood stressful events and the count of missing components for the current wave's spouse, and their values are taken from RACSEVENT and RACSEVENTM. In

addition to the special missing codes used in RACSEVENT and RACSEVENTM, SwCSEVENT and SwCSEVENTM employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed. Plain missing (.) is assigned to SwCSEVENT and SwCSEVENTM if the respondent's spouse is not the wave.

RACHSHLT is the respondent's self-rated health while they were growing up, before age 16. The respondent used a scale ranging from Excellent to Poor. RACHSHLT is coded as follows: 1.excellent, 2.very good, 3.good, 4.fair, 5.poor. RACHSHLT takes the first non-missing value reported and is asked starting in Wave 4. Don't know, refused, or other missing responses to RACHSHLT are assigned special missing values .d, .r, .m respectively. Special missing value .a is assigned for RACHSHLT if the respondent did not participate in a wave in which the question was asked.

RAFINANCH is the respondent's self-rated family financial situation while they were growing up, before age 16. A code of 1 is assigned if the respondent feels the financial situation in the family while they were growing up was pretty well off. A code of 2 is assigned if the respondent feels the financial situation in the family while they were growing up was about average. A code of 3 is assigned if the respondent feels the financial situation in the family was poor. Special missing .n is assigned if the respondent feels the financial situation varied. Special missing .a is assigned if the respondent was not interviewed when the question was asked as the question was added starting in Wave 4. Don't know, refused, or other missing responses to RAFINANCH are assigned special missing values .d, .r, .m respectively.

SwCHSHLT and SwFINANCH are the respondent's current wave's spouse's self-rated health and family financial situation while they were growing up, and their values are taken from RACHSHLT and RAFINANCH. In addition to the special missing codes used in the respondent variables, the spouse variables employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed. Plain missing (.) is assigned if the respondent's spouse is not in the wave.

RALIVDIFFCH indicates whether the respondent experienced a difficult living arrangement before age 16. A code of 1 is assigned if the respondent had ever lived in a children's home, orphanage, a foster family or a boarding school. A code of 0 is assigned if the respondent never lived in a children's home, orphanage, a foster family or a boarding school. RALIVDIFFCH takes the first non-missing report. Special missing .a is assigned if the respondent was not asked this question as part of the HRS Life History Survey. Special missing .m is assigned if the response for the question is missing.

RAPADIVCH indicates whether the respondent's parents separated or divorced before age 16. RAPADIECH indicates whether one or both of the respondent's parents died before age 16. RASEPMOM indicates whether the respondent was ever separated from their mother before age 16. RASEPDAD indicates whether the respondent was ever separated from their father before age 16. A code of 1 is assigned if the respondent agrees with the statement. A code of 0 is assigned if the respondent disagrees with the statement. RAPADIVCH, RAPADIECH, RASEPMOM, and RASEPDAD take the first non-missing report. Special missing .a is assigned if the respondent was not asked this question as part of the HRS Life History Survey. Special missing .m is assigned if the response for the question is missing.

SwLIVDIFFCH, SwPADIVCH, SwPADIECH, SwSEPMOM and SwSEPDAD indicate the respondent's current wave's spouse's living and family situations in childhood, and their values are taken from the RALIVDIFFCH, RAPADIVCH, RAPADIECH, RASEPMOM and RASEPDAD. In addition to the special missing codes used in the respondent variables, the spouse variables employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed. Plain missing (.) is assigned if the respondent's spouse is not in the wave.

RALHCHILD is the count of how many childhood stressful life events the respondent experienced by the age of 16 and is based on the following life history components: whether the respondent experienced a difficult living arrangement before age 16 (RALIVDIFFCH), whether the respondent's parents separated or divorced before age 16 (RAPADIVCH), and whether before the age of 16 one or both parents of the respondent died (RAPADIECH). RALHCHILD is calculated as long as one of the component variables is non-missing. RALHCHILDM is the count of missing components in RALHCHILD, which could be between no missing components (0) and three missing components (3). Special missing .a is assigned to RALHCHILD and RALHCHILDM if the respondent is either not eligible for or did not complete the life history

questionnaire. Special missing .m is assigned to RALHCHILD if the respondent took the life history questionnaire, but did not respond to the three components of the summary score.

SwLHCHILD is the count of how many childhood stressful life events the respondent's current wave's spouse experienced by the age of 16 and is taken from the spouse's values of RALHCHILD. SwLHCHILDM is the count of missing components in SwLHCHILD and is taken from the spouse's values of RALHCHILDM. In addition to the special missing codes used in RALHCHILD and RALHCHILDM, SwLHCHILD and SwLHCHILDM employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed. Plain missing (.) is assigned if the respondent's spouse is not in the wave.

## Cross Wave Differences in HRS

Questions about self-rated health and the family financial situation while the respondent was growing up before age 16 were added at Wave 4. The self-rated health question is asked of all participants in Wave 4 and Wave 9. Participants in Waves 5 through 8 and after Wave 9 are only asked the self-rated health question if they did not participate in a previous wave. The family financial situation question is asked of all participants in Wave 4 and then only of new participants in the waves thereafter.

Questions about whether the respondent was physically abused by either of their parents, and whether their parents drank or used drugs so often that it caused problems were added in Wave 8.

Questions about whether the respondent had been a victim of an attack/assault, had a life-threatening illness or accident, has experienced the death of their own child, and has experienced a spouse or a child having a life-threatening illness or accident were added in the Wave 7 self-completion survey but were only asked to a portion of the leave-behind sample as HRS administered two self-completion surveys in Wave 7, a Psycho-Social survey and a Disability Vignettes survey. Starting in Wave 8, there was only one self-completion survey.

Questions about whether the respondent had been in a major fire, flood, earthquake or other natural disaster, had fired a weapon in combat or been fired upon in combat, and has experienced a spouse, partner, or child having an addiction to drugs or alcohol were added in Wave 8.

Questions about whether the respondent has been in trouble with the police before the age of 18 was added in Wave 9.

Questions about whether the respondent missed a month or more of school before age 16 because of a health condition were added in Wave 9. This question was also asked in an experimental module of Wave 3, but the responses are not added to the Harmonized HRS.

Questions about whether the respondent had experienced a difficult living arrangement, whether the respondent's parents separated or divorced, whether one or both of the respondent's parents died, and whether the respondent was ever separated from mother/father before age 16 were only asked in the life history questionnaires.

Many of the childhood and lifetime stressful events questions were not asked starting in Wave 12.

## HRS Variables Used:

## How Constructed:

RwMOMEFT indicates how much effort the respondent feels their mother put into watching over and making sure the respondent had a good upbringing before age 18. RwMOMEFT has been coded so that a higher score indicates more parental warmth as follows: 1.not at all, 2.a little, 3.some, 4.a lot. Special missing .c is assigned if the respondent is either not eligible for or did not complete the leave behind questionnaire. Special missing .m is assigned if the respondent is eligible for and completed the leave behind questionnaire but their response for the question is missing. Plain missing (.) is assigned if the respondent is not in the wave.

RwMOMATT indicates how much time and attention the respondent feels their mother gave them when they needed it before age 18. RwMOMATT has been coded so that a higher score indicates more parental warmth as follows: 1.not at all, 2.a little, 3.some, 4.a lot. Special missing .c is assigned if the respondent is either not eligible for or did not complete the leave behind questionnaire. Special missing .m is assigned if the respondent is eligible for and completed the leave behind questionnaire but their response for the question is missing. Plain missing (.) is assigned if the respondent is not in the wave.

RwMOMGRELA indicates how much the respondent agrees that they had a good relationship with their mother before age 18. RwDADGRELA indicates how much the respondent agrees that they had a good relationship with their father before age 18. RwMOMGRELA and RwDADGRELA has been coded so that a higher score indicates more parental warmth. A code of 1 is assigned if the respondent strongly disagreed with the statement. A code of 2 is assigned if the respondent disagreed with the statement. A code of 3 is assigned if the respondent neither agreed nor disagreed with the statement. A code of 4 is assigned if the respondent agreed with the statement. A code of 5 is assigned if the respondent strongly agreed with the statement. Special missing .c is assigned if the respondent is either not eligible for or did not complete the leave behind questionnaire. Special missing .n is assigned if the respondent reports that the statement does not apply to them. Special missing .m is assigned if the respondent is eligible for and completed the leave behind questionnaire but their response for the question is missing. Plain missing (.) is assigned if the respondent is not in the wave.

SwMOMEFT, SwMOMATT, SwMOMGRELA, and SwDADGRELA indicate the respondent's current wave's spouse's experience with their parents, and their values are taken from RwMOMEFT, RwMOMATT, RwMOMGRELA, and RwDADGRELA. In addition to the special missing codes used in the respondent variables, the spouse

variables employ two additional special missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RAPWARM is the mean measure of parental warmth. It is based on the earliest report of the following three components: how much time and attention the respondent's mother gave them when they needed it before age 18 (RwMOMATT), how much effort the respondent's mother put into watching over and making sure the respondent had a good upbringing before age 18 (RwMOMEFT), and how much the respondent agrees that they had a good relationship with their mother before age 18 (RwMOMGRELA). To construct this mean score, RwMOMGRELA had to be transitioned from a five-point score to a four-point score: 1.strongly disagree, 2.disagree, 2.5.neither agree nor disagree, 3.agree, 4.strongly agree. RAPWARM is calculated as long as one of its component variables is non-missing. RAPWARMM is the count of missing components in RAPWARM, which could be between no missing components (0) and three missing components (3). Special missing .c is assigned to RAPWARM and RAPWARMM if the respondent is either not eligible for or did not complete the leave behind questionnaire. Special missing .m is assigned to RAPWARM if all three components of this mean score are missing.

SwPWARM and SwPWARM are the mean measure of parental warmth and the count of missing components for the current wave's spouse, and their values are taken from RAPWARM and RAPWARMM. In addition to the special missing codes used in RAPWARM and RAPWARMM, SwPWARM and SwPWARM employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed. Plain missing (.) is assigned if the respondent's spouse is not in the wave.

## Cross Wave Differences in HRS

Questions about how much respondent agrees that they had a good relationship with their mother/father, how much effort the respondent's mother put into watching over them and making sure the respondent had a good upbringing, and how much time and attention the respondent's mother gave them when they needed it before age 18 were added in Wave 9. These questions were not asked starting in Wave 12.

## HRS Variables Used:

### Wave 9:

LLB032D	q32d. good relationship with mother
LLB032E	q32e. good relationship with father
LLB037H	q37h. amount time/attention mother
LLB037I	q37i. effort from mother
LLBCOMP	mode completed leave behind qnaire

### Wave 10:

MLB032D	q32a1. good relationship with mother
MLB032E	q32a2. good relationship with father
MLB037H	q37h. amount time/attention mother
MLB037I	q37i. effort from mother
MLBCOMP	mode completed leave behind qnaire

### Wave 11:

NLB032D	q32a1. good relationship with mother
NLB032E	q32a2. good relationship with father
NLB037H	q37h. amount time/attention mother
NLB037I	q37i. effort from mother
NLBCOMP	mode completed leave behind qnaire

### How Constructed:

Loneliness questions are asked to respondents as part of the self-completion survey. For all statements, respondents are asked how often they experience the feeling in the statement and are given the options: often, some of the time, or hardly ever or never. In Waves 6 and 7, the answer options are listed 1)hardly ever or never, 2)some of the time, 3) often. Starting in Wave 8 the answer options are listed 1)often, 2)some of the time, 3)hardly ever or never. For the purposes of cross-wave consistency the answers have all been coded so that the higher the score, the more lonely the respondent feels.

RwCOMPLAC indicates how often the respondent feels they lack companionship. RwCOMPLAC is coded as follows: 1.hardly ever or never, 2.some of the time, 3.often.

RwLEFTOUT indicates how often the respondent feels left out. RwLEFTOUT is coded as follows: 1.hardly ever or never, 2.some of the time, 3.often.

RwISOLATE indicates how often the respondent feels isolated from others. RwISOLATE is coded as follows: 1.hardly ever or never, 2.some of the time, 3.often.

RwINTUNE indicates how often the respondent feels in tune with the people around them. RwINTUNE is coded as follows: 1.often, 2.some of the time, 3.hardly ever or never. This question is not asked in Waves 7 or 8.

Special missing .c is assigned if the respondent is either not eligible for or did not complete the leave behind questionnaire. Special missing .m is assigned if the respondent is eligible for and completed the leave behind questionnaire but their response for the question is missing. Don't know and refused answers are assigned special missing .d and .r, respectively. These variables are assigned plain missing (.) if the respondent did not participate in the current wave.

SwCOMPLAC, SwLEFTOUT, SwISOLATE and SwINTUNE indicate how often the current wave's spouse feels lack of companionship, left out, isolated from others, and in tune with the people around them, respectively. They are taken from the spouse's values to RwCOMPLAC, RwLEFTOUT, RwISOLATE and RwINTUNE. In addition to the special missing codes employed by RwCOMPLAC, RwLEFTOUT, RwISOLATE and RwINTUNE, SwCOMPLAC, SwLEFTOUT, SwISOLATE and SwINTUNE employ two additional missing codes, .u and .v. If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of .v is used.

RwLNLYS indicates the mean of four different loneliness questions (RwCOMPLAC, RwLEFTOUT, RwISOLATE and RwINTUNE) and can be used as a summary score. RwLNLYS is coded to make sure that higher scores indicate that the respondent feels more lonely. RwLNLYS is calculated for any respondent with at least one non-missing value for its four components. RwLNLYSM counts the number of components with missing values in RwLNLYS, which could be between no missing components (0) and four missing components (4). Special missing .c is assigned to RwLNLYS and RwLNLYSM if the respondent is either not eligible for or did not complete the leave behind questionnaire. Special missing .m is assigned to RwLNLYS if the respondent is

eligible for and completed the leave behind questionnaire but their response for the question is missing. These variables are assigned plain missing (.) if the respondent did not participate in the current wave. Because RwINTUNE is not available in Waves 7 and 8, RwlNLYS and RwlNLYSM are not created for these waves.

SwLNLYS and SwLNLYSM indicate the mean summary score of four different loneliness questions and the count of any missing components for the respondent's current wave's spouse, and their values are taken from RwlNLYS and RwlNLYSM. In addition to the special missing codes used in RwlNLYS and RwlNLYSM, SwLNLYS and SwLNLYSM employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwlNLYS3 indicates the mean of three different loneliness questions (RwCOMPLAC, RwLEFTOUT and RwISOLATE) and can be used as a summary score. RwlNLYS3 is coded to make sure that higher scores indicate that the respondent feels more lonely. RwlNLYS3 is calculated for any respondent with at least one non-missing value for its three components. RwlNLYS3M counts the number of components with missing values in RwlNLYS3, which could be between no missing components (0) and three missing components (3). Special missing .c is assigned to RwlNLYS3 and RwlNLYS3M if the respondent is either not eligible for or did not complete the leave behind questionnaire. Special missing .m is assigned to RwlNLYS3 if the respondent is eligible for and completed the leave behind questionnaire but their responses for the questions are missing. These variables are assigned plain missing (.) if the respondent did not participate in the current wave.

SwLNLYS3 and SwLNLYS3M indicate the mean summary score of three different loneliness questions and the count of any missing components for the respondent's current wave's spouse, and their values are taken from RwlNLYS3 and RwlNLYS3M. In addition to the special missing codes used in RwlNLYS3 and RwlNLYS3M, SwLNLYS3 and SwLNLYS3M employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Questions about how often the respondent feels they lack companionship, feels left out, and feels isolated from others were added in the Wave 6 questionnaire.

Questions about how often the respondent feels in tune with the people around them were added in the Wave 6 questionnaire, not available in the Waves 7 and 8 questionnaires, and available again starting in Wave 9.

In Waves 6 and 7, the answer options are listed: 1)hardly ever or never, 2)some of the time, 3) often. Starting in Wave 8 the answer options are listed: 1)often, 2)some of the time, 3)hardly ever or never.

## HRS Variables Used:

Wave 6:

HV251	r rate often lacks companionship
HV252	r rate how often feel left out
HV253	r rate feel isolated from others
HV254	r rate how in tune to others

Wave 7:

JV251	lack of companionship
JV252	feel left out
JV253	feel isolated from others

Wave 8:

KLB020A	q20a. lack companionship
KLB020B	q20b. feel left out
KLB020C	q20c. feel isolated from others
KLBCOMP	mode completed leave behind qnaire

Wave 9:

LLB020A	q20a. lack companionship
LLB020B	q20b. feel left out
LLB020C	q20c. feel isolated from others
LLB020D	q20d. in tune with others

LLBCOMP mode completed leave behind qnaire  
Wave 10:  
MLB020A q20a. lack companionship  
MLB020B q20b. feel left out  
MLB020C q20c. feel isolated from others  
MLB020D q20d. in tune with others  
MLBCOMP mode completed leave behind qnaire  
Wave 11:  
NLB020A q20a. lack companionship  
NLB020B q20b. feel left out  
NLB020C q20c. feel isolated from others  
NLB020D q20d. in tune with others  
NLBCOMP mode completed leave behind qnaire  
Wave 12:  
OLB019A q19a. lack companionship  
OLB019B q19b. feel left out  
OLB019C q19c. feel isolated from others  
OLB019D q19d. in tune with others  
OLBCOMP mode completed leave behind qnaire  
Wave 13:  
PLB019A q19a. lack companionship  
PLB019B q19b. feel left out  
PLB019C q19c. feel isolated from others  
PLB019D q19d. in tune with others  
PLBCOMP mode completed leave behind qnaire  
Wave 14:  
QLB019A q19a. lack companionship  
QLB019B q19b. feel left out  
QLB019C q19c. feel isolated from others  
QLB019D q19d. in tune with others  
QLBCOMP mode completed leave behind qnaire  
Wave 15:  
RLB019A q19a. lack companionship  
RLB019B q19b. feel left out  
RLB019C q19c. feel isolated from others  
RLB019D q19d. in tune with others  
RLBCOMP mode completed leave behind qnaire

### How Constructed:

RwSUSTDFE indicates how much the respondent feels their spouse really understands the way they feel about things.

RwSRELY indicates how much the respondent feels they can rely on their spouse if they have a serious problem.

RwSOPENUP indicates how much the respondent feels they can open up to their spouse when they need to talk about their worries.

RwSDEMAND indicates how often the respondent feels their spouse makes too many demands on them.

RwSCRITZE indicates how much the respondent feels their spouse criticizes them.

RwSLETDOW indicates how much the respondent feels their spouse lets them down when they are counting on them.

RwSGETNEV indicates how much the respondent feels their spouse gets on their nerves.

These variables are coded so that a higher value indicates a higher amount of stress for the respondent. RwSUSTDFE, RwSRELY, and RwSOPENUP are coded as follows: 1.a lot, 2.some, 3.a little and 4.not at all. RwSDEMAND, RwSCRITZE, RwSLETDOW, and RwSGETNEV are coded as follows: 1.not at all, 2.a little, 3.some, 4.a lot. Special missing .n is assigned if the respondent indicates they did not live with a husband, wife or partner. Special missing .c is assigned if the respondent is either not eligible for or did not complete the leave behind questionnaire. Special missing .m is assigned if the respondent is eligible for and completed the leave behind questionnaire but their response for the question is missing. These variables are assigned plain missing (.) if the respondent did not participate in the current wave.

SwSUSTDFE, SwSRELY, SwSOPENUP, SwSDEMAND, SwSCRITZE, SwSLETDOW and SwSGETNEV indicate the respondent's current wave's spouse's feelings about their spouse, and their values are taken from the spouse's values to RwSUSTDFE, RwSRELY, RwSOPENUP, RwSDEMAND, RwSCRITZE, RwSLETDOW and RwSGETNEV. In addition to the special missing codes used in RwSUSTDFE, RwSRELY, RwSOPENUP, RwSDEMAND, RwSCRITZE, RwSLETDOW and RwSGETNEV, SwSUSTDFE, SwSRELY, SwSOPENUP, SwSDEMAND, SwSCRITZE, SwSLETDOW and SwSGETNEV employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwSSUPPORT indicates the mean of the seven different spouse support questions (RwSUSTDFE, RwSRELY, RwSOPENUP, RwSDEMAND, RwSCRITZE, RwSLETDOW and RwSGETNEV) and can be used as a summary score. Since RwSSUPPORT indicates how much the respondent feels a lack of support from their spouse, higher scores indicate less support that the respondent feels from their spouse. RwSSUPPORT is calculated for any respondent with at least one non-missing value for its seven components. RwSSUPPORTM counts the number of components with missing values in RwSSUPPORT, which could be between no missing components (0) and seven missing components (7). Special missing .n is assigned to RwSSUPPORT and RwSSUPPORTM if the respondent indicates they did not live with a husband, wife or partner. Special missing .c is assigned to RwSSUPPORT and RwSSUPPORTM if the respondent is either not eligible for or did not complete the leave behind questionnaire. Special missing .m is assigned to RwSSUPPORT if the respondent is eligible for and completed the leave behind questionnaire but their response for all questions are missing. These variables are assigned plain missing (.) if the respondent did not participate in the current wave.

SwSSUPPORT and SwSSUPPORTM indicate the mean summary score of seven different spouse support questions and the count of any missing components for the respondent's current wave's spouse, and their values are taken from the spouse's values to RwSSUPPORT and RwSSUPPORTM. In addition to the special missing codes used in RwSSUPPORT and RwSSUPPORTM, SwSSUPPORT and SwSSUPPORTM employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

The questions related to spouse's support were added in Wave 8.

### HRS Variables Used:

#### Wave 8:

KLB004	q04. live with spouse or partner
KLB005A	q05a. sp/p understand the way you feel
KLB005B	q05b. rely on sp/p if serious problem
KLB005C	q05c. open up to sp/p about worries
KLB005D	q05d. too many demands on you - sp/p
KLB005E	q05e. amt sp/p criticizes you
KLB005F	q05f. sp/p let you down
KLB005G	q05g. sp/p gets on your nerves
KLBCOMP	mode completed leave behind qnaire

#### Wave 9:

LLB004	q04. live with spouse or partner
LLB005A	q05a. sp/p understand the way you feel
LLB005B	q05b. rely on sp/p if serious problem
LLB005C	q05c. open up to sp/p about worries
LLB005D	q05d. too many demands on you - sp/p
LLB005E	q05e. amt sp/p criticizes you
LLB005F	q05f. sp/p let you down
LLB005G	q05g. sp/p gets on your nerves
LLBCOMP	mode completed leave behind qnaire

#### Wave 10:

MLB004	q04. live with spouse or partner
MLB005A	q05a. sp/p understand the way you feel
MLB005B	q05b. rely on sp/p if serious problem
MLB005C	q05c. open up to sp/p about worries
MLB005D	q05d. too many demands on you - sp/p
MLB005E	q05e. amt sp/p criticizes you
MLB005F	q05f. sp/p let you down
MLB005G	q05g. sp/p gets on your nerves
MLBCOMP	mode completed leave behind qnaire

#### Wave 11:

NLB004	q04. live with spouse or partner
NLB005A	q05a. sp/p understand the way you feel
NLB005B	q05b. rely on sp/p if serious problem
NLB005C	q05c. open up to sp/p about worries
NLB005D	q05d. too many demands on you - sp/p
NLB005E	q05e. amt sp/p criticizes you
NLB005F	q05f. sp/p let you down
NLB005G	q05g. sp/p gets on your nerves
NLBCOMP	mode completed leave behind qnaire

#### Wave 12:

OLB003	q03. live with spouse or partner
OLB004A	q04a. sp/p understand the way you feel
OLB004B	q04b. rely on sp/p if serious problem
OLB004C	q04c. open up to sp/p about worries
OLB004D	q04d. too many demands on you - sp/p
OLB004E	q04e. amt sp/p criticizes you
OLB004F	q04f. sp/p let you down
OLB004G	q04g. sp/p gets on your nerves
OLBCOMP	mode completed leave behind qnaire

#### Wave 13:

PLB003	q03. live with spouse or partner
PLB004A	q04a. sp/p understand the way you feel
PLB004B	q04b. rely on sp/p if serious problem
PLB004C	q04c. open up to sp/p about worries
PLB004D	q04d. too many demands on you - sp/p

PLB004E q04e. amt sp/p criticizes you  
PLB004F q04f. sp/p let you down  
PLB004G q04g. sp/p gets on your nerves  
PLBCOMP mode completed leave behind qnaire

## Wave 14:

QLB003 q03. live with spouse or partner  
QLB004A q04a. sp understand the way you feel  
QLB004B q04b. rely on sp/p if serious problem  
QLB004C q04c. open up to sp/p about worries  
QLB004D q04d. too many demands on you - sp/p  
QLB004E q04e. amt sp/p criticizes you  
QLB004F q04f. sp/p let you down  
QLB004G q04g. sp/p gets on your nerves  
QLBCOMP mode completed leave behind qnaire

## Wave 15:

RLB003 q03. live with spouse or partner  
RLB004A q04a. sp understand the way you feel  
RLB004B q04b. rely on sp/p if serious problem  
RLB004C q04c. open up to sp/p about worries  
RLB004D q04d. too many demands on you - sp/p  
RLB004E q04e. amt sp/p criticizes you  
RLB004F q04f. sp/p let you down  
RLB004G q04g. sp/p gets on your nerves  
RLBCOMP mode completed leave behind qnaire

## How Constructed:

RwKUSTDFE indicates how much the respondent feels their children really understand the way they feel about things.

RwKRELY indicates how much the respondent feels they can rely on their children if they have a serious problem.

RwKOPENUP indicates how much the respondent feels they can open up to their children when they need to talk about their worries.

RwKDEMAND indicates how often the respondent feels their children make too many demands on them.

RwKCRITZE indicates how much the respondent feels their children criticize them.

RwKLETDOW indicates how much the respondent feels their children let them down when they are counting on them.

RwKGETNEV indicates how much the respondent feels their children get on their nerves.

These variables are coded so that a higher value indicates a higher amount of stress for the respondent. RwKUSTDFE, RwKRELY, and RwKOPENUP are coded as follows: 1.a lot, 2.some, 3.a little and 4.not at all. RwKDEMAND, RwKCRITZE, RwKLETDOW, and RwKGETNEV are coded as follows: 1.not at all, 2.a little, 3.some, 4.a lot. Special missing .n is assigned if the respondent indicates they did not have any children. Special missing .c is assigned if the respondent is either not eligible for or did not complete the leave behind questionnaire. Special missing .m is assigned if the respondent is eligible for and completed the leave behind questionnaire but their response for the question is missing. These variables are assigned plain missing (.) if the respondent did not participate in the current wave.

SwKUSTDFE, SwKRELY, SwKOPENUP, SwKDEMAND, SwKCRITZE, SwKLETDOW and SwKGETNEV indicate how the respondent's current wave's spouse feels about statements regarding their children, and their values are taken from RwKUSTDFE, RwKRELY, RwKOPENUP, RwKDEMAND, RwKCRITZE, RwKLETDOW and RwKGETNEV. In addition to the special missing codes used in RwKUSTDFE, RwKRELY, RwKOPENUP, RwKDEMAND, RwKCRITZE, RwKLETDOW and RwKGETNEV, SwKUSTDFE, SwKRELY, SwKOPENUP, SwKDEMAND, SwKCRITZE, SwKLETDOW and SwKGETNEV employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwKSUPPORT indicates the mean of the seven different children support questions (RwKUSTDFE, RwKRELY, RwKOPENUP, RwKDEMAND, RwKCRITZE, RwKLETDOW and RwKGETNEV) and can be used as a summary score. Since RwKSUPPORT indicates how much the respondent feels a lack of support by their children, higher scores indicate less support that the respondent feels from their children. RwKSUPPORT is calculated for any respondent with at least one non-missing value for its seven components. RwKSUPPORTM counts the number of components with missing values in RwKSUPPORT, which could be between no missing components (0) and seven missing components (7). Special missing .n is assigned to RwKSUPPORT and RwKSUPPORTM if the respondent indicates they did not have any children. Special missing .c is assigned to RwKSUPPORT and RwKSUPPORTM if the respondent is either not eligible for or did not complete the leave behind questionnaire. Special missing .m is assigned to RwKSUPPORT if the respondent is eligible for and completed the leave behind questionnaire but their responses for all seven questions are missing. These variables are assigned plain missing (.) if the respondent did not participate in the current wave.

SwKSUPPORT and SwKSUPPORTM indicate the mean summary score of seven different children support questions and the count of any missing components for the respondent's current wave's spouse, and their values are taken from RwKSUPPORT and RwKSUPPORTM. In addition to the special missing codes used in RwKSUPPORT and SwKSUPPORTM, SwKSUPPORT and SwKSUPPORTM employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

The questions related to children's support were added in Wave 8.

### HRS Variables Used:

#### Wave 8:

KLB007	q07. have any children
KLB008A	q08a. children understand way you feel
KLB008B	q08b. rely on children if serious prob
KLB008C	q08c. open up to children about worries
KLB008D	q08d. too many demands on you - children
KLB008E	q08e. amt children criticize you
KLB008F	q08f. children let you down
KLB008G	q08g. children get on your nerves
KLBCOMP	mode completed leave behind qnaire

#### Wave 9:

LLB007	q07. have any children
LLB008A	q08a. children understand way you feel
LLB008B	q08b. rely on children if serious prob
LLB008C	q08c. talk about worries - children
LLB008D	q08d. too many demands on you - children
LLB008E	q08e. amt children criticize you
LLB008F	q08f. children let you down
LLB008G	q08g. children get on your nerves
LLBCOMP	mode completed leave behind qnaire

#### Wave 10:

MLB007	q07. have any children
MLB008A	q08a. children understand way you feel
MLB008B	q08b. rely on children if serious prob
MLB008C	q08c. talk about worries - children
MLB008D	q08d. too many demands on you - children
MLB008E	q08e. amt children criticize you
MLB008F	q08f. children let you down
MLB008G	q08g. children get on your nerves
MLBCOMP	mode completed leave behind qnaire

#### Wave 11:

NLB007	q07. have any children
NLB008A	q08a. children understand way you feel
NLB008B	q08b. rely on children if serious prob
NLB008C	q08c. talk about worries - children
NLB008D	q08d. too many demands on you - children
NLB008E	q08e. amt children criticize you
NLB008F	q08f. children let you down
NLB008G	q08g. children get on your nerves
NLBCOMP	mode completed leave behind qnaire

#### Wave 12:

OLB006	q06. have any children
OLB007A	q07a. children understand way you feel
OLB007B	q07b. rely on children if serious prob
OLB007C	q07c. talk about worries - children
OLB007D	q07d. too many demands on you - children
OLB007E	q07e. amt children criticize you
OLB007F	q07f. children let you down
OLB007G	q07g. children get on your nerves
OLBCOMP	mode completed leave behind qnaire

#### Wave 13:

PLB006	q06. have any children
PLB007A	q07a. children understand way you feel
PLB007B	q07b. rely on children if serious prob
PLB007C	q07c. talk about worries - children
PLB007D	q07d. too many demands on you - children

PLB007E q07e. amt children criticize you  
PLB007F q07f. children let you down  
PLB007G q07g. children get on your nerves  
PLBCOMP mode completed leave behind qnaire

## Wave 14:

QLB006 q06. have any children  
QLB007A q07a. children understand  
QLB007B q07b. rely on children if problem  
QLB007C q07c. talk about worries  
QLB007D q07d. too many demands - children  
QLB007E q07e. children criticize you  
QLB007F q07f. children let you down  
QLB007G q07g. children get on your nerves  
QLBCOMP mode completed leave behind qnaire

## Wave 15:

RLB006 q06. have any children  
RLB007A q07a. children understand  
RLB007B q07b. rely on children if problem  
RLB007C q07c. talk about worries  
RLB007D q07d. too many demands - children  
RLB007E q07e. children criticize you  
RLB007F q07f. children let you down  
RLB007G q07g. children get on your nerves  
RLBCOMP mode completed leave behind qnaire

### How Constructed:

RwOUSTDFE indicates how much the respondent feels their other immediate family members really understand the way they feel about things.

RwORELY indicates how much the respondent feels they can rely on their other immediate family members if they have a serious problem.

RwOOPENUP indicates how much the respondent feels they can open up to their other immediate family members when they need to talk about their worries.

RwODEMAND indicates how often the respondent feels their other immediate family members make too many demands on them.

RwOCRITZE indicates how much the respondent feels their other immediate family members criticize them.

RwOLETDOW indicates how much the respondent feels their other immediate family members let them down when they are counting on them.

RwOGETNEV indicates how much the respondent feels their other immediate family members get on their nerves.

These variables are coded so that a higher value indicates a higher amount of stress for the respondent. RwOUSTDFE, RwORELY, and RwOOPENUP are coded as follows: 1.a lot, 2.some, 3.a little and 4.not at all. RwODEMAND, RwOCRITZE, RwOLETDOW, and RwOGETNEV are coded as follows: 1.not at all, 2.a little, 3.some, 4.a lot. Special missing .n is assigned if the respondent indicates they did not have any other immediate family members. Special missing .c is assigned if the respondent is either not eligible for or did not complete the leave behind questionnaire. Special missing .m is assigned if the respondent is eligible for and completed the leave behind questionnaire but their response for the question is missing. These variables are assigned plain missing (.) if the respondent did not participate in the current wave.

SwOUSTDFE, SwORELY, SwOOPENUP, SwODEMAND, SwOCRITZE, SwOLETDOW and SwOGETNEV indicate how much the respondent's current wave's spouse feels about statements regarding their other immediate family members, and their values are taken from RwOUSTDFE, RwORELY, RwOOPENUP, RwODEMAND, RwOCRITZE, RwOLETDOW and RwOGETNEV. In addition to the special missing codes used in RwOUSTDFE, RwORELY, RwOOPENUP, RwODEMAND, RwOCRITZE, RwOLETDOW and RwOGETNEV, SwOUSTDFE, SwORELY, SwOOPENUP, SwODEMAND, SwOCRITZE, SwOLETDOW and SwOGETNEV employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwOSUPPORT indicates the mean of the seven different other immediate family members support questions (RwOUSTDFE, RwORELY, RwOOPENUP, RwODEMAND, RwOCRITZE, RwOLETDOW and RwOGETNEV) and can be used as a summary score. Since RwOSUPPORT indicates how much the respondent feels a lack of support from their other immediate family members, higher scores indicate less support that the respondent feels from their other immediate family members. RwOSUPPORT is calculated for any respondent with at least one non-missing value for its seven components. RwOSUPPORTM counts the number of components with missing values in RwOSUPPORT, which could be between no missing components (0) and seven missing components (7). Special missing .n is assigned to RwOSUPPORT and RwOSUPPORTM if the respondent indicates they did not have any other immediate family members. Special missing .c is assigned to RwOSUPPORT and RwOSUPPORTM if the respondent is either not eligible for or did not complete the leave behind questionnaire. Special missing .m is assigned to RwOSUPPORT if the respondent is eligible for and completed the leave behind questionnaire but their responses for all seven questions are missing. These variables are assigned plain missing (.) if the respondent did not participate in the current wave.

SwOSUPPORT and SwOSUPPORTM indicate the mean summary score of seven different other immediate family members support questions and the count of any missing components for the respondent's current wave's spouse, and their values are taken from the spouse's values to RwOSUPPORT and RwOSUPPORTM. In addition to the special missing codes used in RwOSUPPORT and RwOSUPPORTM, SwOSUPPORT and SwOSUPPORTM employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being

coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

The questions related to other immediate family members' support were added in Wave 8.

### HRS Variables Used:

#### Wave 8:

KLB011	q11. have any other immediate family
KLB012A	q12a. oth fam members understand you
KLB012B	q12b. rely oth fam mem if serious prob
KLB012C	q12c. open up to other family members
KLB012D	q12d. too many demands on you - fam mem
KLB012E	q12e. oth family members criticize you
KLB012F	q12f. oth family members let you down
KLB012G	q12g. oth fam members get on your nerves
KLBCOMP	mode completed leave behind qnaire

#### Wave 9:

LLB011	q11. have any other immediate family
LLB012A	q12a. oth fam members understand you
LLB012B	q12b. rely oth fam mem if serious prob
LLB012C	q12c. open up to other family members
LLB012D	q12d. too many demands on you - fam mem
LLB012E	q12e. oth family members criticize you
LLB012F	q12f. oth family members let you down
LLB012G	q12g. oth fam members get on your nerves
LLBCOMP	mode completed leave behind qnaire

#### Wave 10:

MLB011	q11. have any other immediate family
MLB012A	q12a. oth fam members understand you
MLB012B	q12b. rely oth fam mem if serious prob
MLB012C	q12c. open up to other family members
MLB012D	q12d. too many demands on you - fam mem
MLB012E	q12e. oth family members criticize you
MLB012F	q12f. oth family members let you down
MLB012G	q12g. oth fam members get on your nerves
MLBCOMP	mode completed leave behind qnaire

#### Wave 11:

NLB011	q11. have any other immediate family
NLB012A	q12a. oth fam members understand you
NLB012B	q12b. rely oth fam mem if serious prob
NLB012C	q12c. open up to other family members
NLB012D	q12d. too many demands on you - fam mem
NLB012E	q12e. oth family members criticize you
NLB012F	q12f. oth family members let you down
NLB012G	q12g. oth fam members get on your nerves
NLBCOMP	mode completed leave behind qnaire

#### Wave 12:

OLB010	q10. have any other immediate family
OLB011A	q11a. oth fam members understand you
OLB011B	q11b. rely oth fam mem if serious prob
OLB011C	q11c. open up to other family members
OLB011D	q11d. too many demands on you - fam mem
OLB011E	q11e. oth family members criticize you
OLB011F	q11f. oth family members let you down
OLB011G	q11g. oth fam members get on your nerves
OLBCOMP	mode completed leave behind qnaire

#### Wave 13:

PLB010	q10. have any other immediate family
PLB011A	q11a. oth fam members understand you

PLB011B q11b. rely oth fam mem if serious prob  
PLB011C q11c. open up to other family members  
PLB011D q11d. too many demands on you - fam mem  
PLB011E q11e. oth family members criticize you  
PLB011F q11f. oth family members let you down  
PLB011G q11g. oth fam members get on your nerves  
PLBCOMP mode completed leave behind qnaire

## Wave 14:

QLB010 q10. any other immediate family  
QLB011A q11a. oth fam mems understand  
QLB011B q11b. rely oth fam mem if prob  
QLB011C q11c. open up to other family mems  
QLB011D q11d. too many demands - fam mems  
QLB011E q11e. oth fam mems criticize you  
QLB011F q11f. oth fam mems let you down  
QLB011G q11g. oth fam mems get on nerves  
QLBCOMP mode completed leave behind qnaire

## Wave 15:

RLB010 q10. any other immediate family  
RLB011A q11a. oth fam mems understand  
RLB011B q11b. rely oth fam mem if prob  
RLB011C q11c. open up to other family mems  
RLB011D q11d. too many demands - fam mems  
RLB011E q11e. oth fam mems criticize you  
RLB011F q11f. oth fam mems let you down  
RLB011G q11g. oth fam mems get on nerves  
RLBCOMP mode completed leave behind qnaire

### How Constructed:

RwFUSTDFE indicates how much the respondent feels their friends really understand the way they feel about things.

RwFRELY indicates how much the respondent feels they can rely on their friends if they have a serious problem.

RwFOPENUP indicates how much the respondent feels they can open up to their friends when they need to talk about their worries.

RwFDEMAND indicates how often the respondent feels their friends make too many demands on them.

RwFCRITZE indicates how much the respondent feels their friends criticize them.

RwFLETDOW indicates how much the respondent feels their friends let them down when they are counting on them.

RwFGETNEV indicates how much the respondent feels their friends get on their nerves.

These variables are coded so that a higher value indicates a higher amount of stress for the respondent. RwFUSTDFE, RwFRELY, and RwFOPENUP are coded as follows: 1.a lot, 2.some, 3.a little and 4.not at all. RwFDEMAND, RwFCRITZE, RwFLETDOW, and RwFGETNEV are coded as follows: 1.not at all, 2.a little, 3.some, 4.a lot. Special missing .n is assigned if the respondent indicates they did not have any friends. Special missing .c is assigned if the respondent is either not eligible for or did not complete the leave behind questionnaire. Special missing .m is assigned if the respondent is eligible for and completed the leave behind questionnaire but their response for the question is missing. These variables are assigned plain missing (.) if the respondent did not participate in the current wave.

SwFUSTDFE, SwFRELY, SwFOPENUP, SwFDEMAND, SwFCRITZE, SwFLETDOW and SwFGETNEV indicate the respondent's current wave's spouse's feelings about statements regarding their friends, and their values are taken from the spouse's values to RwFUSTDFE, RwFRELY, RwFOPENUP, RwFDEMAND, RwFCRITZE, RwFLETDOW and RwFGETNEV. In addition to the special missing codes used in RwFUSTDFE, RwFRELY, RwFOPENUP, RwFDEMAND, RwFCRITZE, RwFLETDOW and RwFGETNEV, SwFUSTDFE, SwFRELY, SwFOPENUP, SwFDEMAND, SwFCRITZE, SwFLETDOW and SwFGETNEV employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwFSUPPORT indicates the mean of the seven different friends support questions (RwFUSTDFE, RwFRELY, RwFOPENUP, RwFDEMAND, RwFCRITZE, RwFLETDOW and RwFGETNEV) and can be used as a summary score. Since RwFSUPPORT indicates how much the respondent feels a lack of support from their friends, higher scores indicate less support that the respondent feels from their friends. RwFSUPPORT is calculated for any respondent with at least one non-missing value for its seven components. RwFSUPPORTM counts the number of components with missing values in RwFSUPPORT, which could be between no missing components (0) and seven missing components (7). Special missing .n is assigned to RwFSUPPORT and RwFSUPPORTM if the respondent indicates they did not have any friends. Special missing .c is assigned to RwFSUPPORT and RwFSUPPORTM if the respondent is either not eligible for or did not complete the leave behind questionnaire. Special missing .m is assigned to RwFSUPPORT if the respondent is eligible for and completed the leave behind questionnaire but their responses to all seven questions are missing. These variables are assigned plain missing (.) if the respondent did not participate in the current wave.

SwFSUPPORT and SwFSUPPORTM indicate the mean summary score of seven different friends support questions and the count of any missing components for the respondent's current wave's spouse, and their values are taken from the spouse's values to RwFSUPPORT and RwFSUPPORTM. In addition to the special missing codes used in RwFSUPPORT and RwFSUPPORTM, SwFSUPPORT and SwFSUPPORTM employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

The questions related to friends' support were added in Wave 8.

### HRS Variables Used:

#### Wave 8:

KLB015 q15. have any friends  
 KLB016A q16a. friends understand way you feel  
 KLB016B q16b. rely on friends if serious problem  
 KLB016C q16c. open up to friends about worries  
 KLB016D q16d. too many demands on you - friends  
 KLB016E q16e. friends criticize you  
 KLB016F q16f. friends let you down  
 KLB016G q16g. friends get on your nerves  
 KLBCOMP mode completed leave behind qnaire

#### Wave 9:

LLB015 q15. have any friends  
 LLB016A q16a. friends understand way you feel  
 LLB016B q16b. rely on friends if serious problem  
 LLB016C q16c. open up to friends about worries  
 LLB016D q16d. too many demands on you - friends  
 LLB016E q16e. friends criticize you  
 LLB016F q16f. friends let you down  
 LLB016G q16g. friends get on your nerves  
 LLBCOMP mode completed leave behind qnaire

#### Wave 10:

MLB015 q15. have any friends  
 MLB016A q16a. friends understand way you feel  
 MLB016B q16b. rely on friends if serious problem  
 MLB016C q16c. open up to friends about worries  
 MLB016D q16d. too many demands on you - friends  
 MLB016E q16e. friends criticize you  
 MLB016F q16f. friends let you down  
 MLB016G q16g. friends get on your nerves  
 MLBCOMP mode completed leave behind qnaire

#### Wave 11:

NLB015 q15. have any friends  
 NLB016A q16a. friends understand way you feel  
 NLB016B q16b. rely on friends if serious problem  
 NLB016C q16c. open up to friends about worries  
 NLB016D q16d. too many demands on you - friends  
 NLB016E q16e. friends criticize you  
 NLB016F q16f. friends let you down  
 NLB016G q16g. friends get on your nerves  
 NLBCOMP mode completed leave behind qnaire

#### Wave 12:

OLB014 q14. have any friends  
 OLB015A q15a. friends understand way you feel  
 OLB015B q15b. rely on friends if serious problem  
 OLB015C q15c. open up to friends about worries  
 OLB015D q15d. too many demands on you - friends  
 OLB015E q15e. friends criticize you  
 OLB015F q15f. friends let you down  
 OLB015G q15g. friends get on your nerves  
 OLBCOMP mode completed leave behind qnaire

#### Wave 13:

PLB014 q14. have any friends  
 PLB015A q15a. friends understand way you feel  
 PLB015B q15b. rely on friends if serious problem  
 PLB015C q15c. open up to friends about worries  
 PLB015D q15d. too many demands on you - friends

PLB015E q15e. friends criticize you  
PLB015F q15f. friends let you down  
PLB015G q15g. friends get on your nerves  
PLBCOMP mode completed leave behind qnaire

## Wave 14:

QLB014 q14. have any friends  
QLB015A q15a. friends understand  
QLB015B q15b. rely on friends if problem  
QLB015C q15c. open up to friends  
QLB015D q15d. too many demands - friends  
QLB015E q15e. friends criticize you  
QLB015F q15f. friends let you down  
QLB015G q15g. friends get on your nerves  
QLBCOMP mode completed leave behind qnaire

## Wave 15:

RLB014 q14. have any friends  
RLB015A q15a. friends understand  
RLB015B q15b. rely on friends if problem  
RLB015C q15c. open up to friends  
RLB015D q15d. too many demands - friends  
RLB015E q15e. friends criticize you  
RLB015F q15f. friends let you down  
RLB015G q15g. friends get on your nerves

## How Constructed:

RwLSRSPCT indicates how often the respondent is treated with less courtesy or respect than other people in day-to-day life.

RwPRSRVC indicates how often the respondent receives poorer service than other people at restaurants or stores in day-to-day life.

RwNOTSMRT indicates how often the respondent feels other people act as if they think the respondent is not smart in day-to-day life.

RwHARASS indicates how often the respondent feels they are threatened or harassed in day-to-day life.

RwPRTRMT indicates how often the respondent receives poorer service or treatment than other people from doctors or hospitals in day-to-day life.

RwACTAFD indicates how often the respondent feels other people act as if they are afraid of the respondent in day-to-day life.

RwLSRSPCT, RwPRSRVC, RwNOTSMRT, RwHARASS, RwPRTRMT and RwACTAFD are coded as follows: 1. never, 2. less than once a year, 3. a few times a year, 4. a few times a month, 5. at least once a week and 6. almost everyday. Special missing .c is assigned if the respondent is either not eligible for or did not complete the leave behind questionnaire. Special missing .m is assigned if the respondent is eligible for and completed the leave behind questionnaire but their response for the question is missing. These variables are assigned plain missing (.) if the respondent did not participate in the current wave.

SwLSRSPCT, SwPRSRVC, SwNOTSMRT, SwHARASS, SwPRTRMT and SwACTAFD indicate the respondent's current wave's spouse's level of agreement with statements about daily life discrimination, and their values are taken from the spouse's values to RwLSRSPCT, RwPRSRVC, RwNOTSMRT, RwHARASS, RwPRTRMT and RwACTAFD. In addition to the special missing codes used in RwLSRSPCT, RwPRSRVC, RwNOTSMRT, RwHARASS, RwPRTRMT and RwACTAFD, SwLSRSPCT, SwPRSRVC, SwNOTSMRT, SwHARASS, SwPRTRMT and SwACTAFD employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwDSCRIM indicates the mean of the six different day-to-day life discrimination questions (RwLSRSPCT, RwPRSRVC, RwNOTSMRT, RwHARASS, RwPRTRMT and RwACTAFD) and can be used as a summary score. Since RwDSCRIM indicates day-to-day life discrimination, we coded the values of RwLSRSPCT, RwPRSRVC, RwNOTSMRT, RwHARASS, RwPRTRMT and RwACTAFD to make sure that higher scores indicate more discrimination that the respondent feels. RwDSCRIM is calculated for any respondent with at least one non-missing value for its six components. RwDSCRIMM counts the number of components with missing values in RwDSCRIM, which could be between no missing components (0) and six missing components (6). Special missing .c is assigned to RwDSCRIM and RwDSCRIMM if the respondent is either not eligible for or did not complete the leave behind questionnaire. Special missing .m is assigned to RwDSCRIM if the respondent is eligible for and completed the leave behind questionnaire but their responses for all six questions are missing. These variables are assigned plain missing (.) if the respondent did not participate in the current wave.

SwDSCRIM and SwDSCRIMM indicate the mean summary score of six different day-to-day life discrimination questions and the count of any missing components for this score for the respondent's current wave's spouse, and their values are taken from the spouse's values to RwDSCRIM and RwDSCRIMM. In addition to the

special missing codes used in RwdSCRIM and RwdSCRIMM, SwDSCRIM and SwDSCRIMM employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwdSCRIM5 indicates the mean of the five different day-to-day life discrimination questions (RwLSRSPCT, RwPRSRVC, RwNOTSMRT, RwHARASS and RwPRTRMT) and can be used as a summary score. Since RwdSCRIM5 indicates day-to-day life discrimination, we coded the values of RwLSRSPCT, RwPRSRVC, RwNOTSMRT, RwHARASS and RwPRTRMT to make sure that higher scores indicate more discrimination that the respondent feels. RwdSCRIM5 is calculated for any respondent with at least one non-missing value for its five components. RwdSCRIM5M counts the number of components with missing values in RwdSCRIM5, which could be between no missing components (0) and five missing components (5). Special missing .c is assigned to RwdSCRIM5 and RwdSCRIM5M if the respondent is either not eligible for or did not complete the leave behind questionnaire. Special missing .m is assigned to RwdSCRIM5 if the respondent is eligible for and completed the leave behind questionnaire but their responses for all five questions are missing. These variables are assigned plain missing (.) if the respondent did not participate in the current wave.

SwDSCRIM5 and SwDSCRIM5M indicate the mean summary score of five different day-to-day life discrimination questions and the count of any missing components for this score for the respondent's current wave's spouse, and their values are taken from the spouse's values to RwdSCRIM5 and RwdSCRIM5M. In addition to the special missing codes used in RwdSCRIM5 and RwdSCRIM5M, SwDSCRIM5 and SwDSCRIM5M employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Questions about how often the respondent feels that they are treated with less courtesy or respect, that they receive poorer service at restaurants, that they feel other people act as if the respondent is not smart, that they feel threatened or harassed, and that they receive poorer service or treatment from doctors or hospitals are asked beginning in Wave 8. The 5 item discrimination summary mean score is available beginning in Wave 8.

Questions about how often the respondent feels other people act as if they are afraid of the respondent in day-to-day life were added in Wave 9; as a result, the 6 item discrimination summary mean score is only available starting in Wave 9.

## HRS Variables Used:

### Wave 8:

KLB030A	q30a. be treated with less respect
KLB030B	q30b. receive poorer service than others
KLB030C	q30c. people act as if you not smart
KLB030D	q30d. people act as if afraid of you
KLB030E	q30e. you are threatened or harassed
KLBCOMP	mode completed leave behind qnaire

### Wave 9:

LLB030A	q30a. be treated with less respect
LLB030B	q30b. receive poorer service than others
LLB030C	q30c. people act as if you not smart
LLB030D	q30d. people act as if afraid of you
LLB030E	q30e. you are threatened or harassed
LLB030F	q30f. worse treatment from doctors
LLBCOMP	mode completed leave behind qnaire

### Wave 10:

MLB030A	q30a. be treated with less respect
MLB030B	q30b. receive poorer service than others
MLB030C	q30c. people act as if you not smart
MLB030D	q30d. people act as if afraid of you
MLB030E	q30e. you are threatened or harassed
MLB030F	q30f. worse treatment from doctors
MLBCOMP	mode completed leave behind qnaire

## Wave 11:

NLB030A q30a. be treated with less respect  
NLB030B q30b. receive poorer service than others  
NLB030C q30c. people act as if you not smart  
NLB030D q30d. people act as if afraid of you  
NLB030E q30e. you are threatened or harassed  
NLB030F q30f. worse treatment from doctors  
NLBCOMP mode completed leave behind qnaire

## Wave 12:

OLB029A q29a. be treated with less respect  
OLB029B q29b. receive poorer service than others  
OLB029C q29c. people act as if you not smart  
OLB029D q29d. people act as if afraid of you  
OLB029E q29e. you are threatened or harassed  
OLB029F q29f. worse treatment from doctors  
OLBCOMP mode completed leave behind qnaire

## Wave 13:

PLB029A q29a. be treated with less respect  
PLB029B q29b. receive poorer service than others  
PLB029C q29c. people act as if you not smart  
PLB029D q29d. people act as if afraid of you  
PLB029E q29e. you are threatened or harassed  
PLB029F q29f. worse treatment from doctors  
PLBCOMP mode completed leave behind qnaire

## Wave 14:

QLB029A q29a. be treated with less respect  
QLB029B q29b. receive poorer service  
QLB029C q29c. people act as if you not smart  
QLB029D q29d. people act as if afraid of you  
QLB029E q29e. threatened or harassed  
QLB029F q29f. worse treatment fr doctors  
QLBCOMP mode completed leave behind qnaire

## Wave 15:

RLB029A q29a. be treated with less respect  
RLB029B q29b. receive poorer service  
RLB029C q29c. people act as if you not smart  
RLB029D q29d. people act as if afraid of you  
RLB029E q29e. threatened or harassed  
RLB029F q29f. worse treatment fr doctors  
RLBCOMP mode completed leave behind qnaire

## How Constructed:

If the respondent reports experiencing any everyday discrimination, they are asked why they think they were discriminated against and to select as many reasons as apply.

RwDCORIGN indicates whether the respondent thinks their ancestry or national origin is the reason for their experience of discrimination.

RwDCGENDR indicates whether the respondent thinks their gender is the reason for their experience of discrimination.

RwDCRACE indicates whether the respondent thinks their race is the reason for their experience of discrimination.

RwDCAGE indicates whether the respondent thinks their age is the reason for their experience of discrimination.

RwDCRLGON indicates whether the respondent thinks their religion is the reason for their experience of discrimination.

RwDCWEGT indicates whether the respondent thinks their weight is the reason for their experience of discrimination.

RwDCDSTAT indicates whether the respondent thinks their physical disability is the reason for their experience of discrimination.

RwDCAPRNC indicates whether the respondent thinks an aspect of their physical appearance is the reason for their experience of discrimination.

RwDCSXORI indicates whether the respondent thinks their sexual orientation is the reason for their experience of discrimination.

RwDCFINAN indicates whether the respondent thinks their financial status is the reason for their experience of discrimination.

RwDCOTHER indicates whether the respondent thinks there are some reasons other than what have been mentioned for their experience of discrimination.

A code of 1 is assigned if the respondent selected the option as a reason for their discrimination. A code of 0 is assigned if the respondent did not select the option as a reason for their discrimination. Special missing .c is assigned if the respondent is either not eligible for or did not complete the leave behind questionnaire. Special missing .n is assigned if the respondent did not report any discrimination. Special missing .m is assigned if the respondent is eligible for and completed the leave behind questionnaire but their response for the question is missing. These variables are assigned plain missing (.) if the respondent did not participate in the current wave.

SwDCORIGN, SwDCGENDR, SwDCRACE, SwDCAGE, SwDCRLGON, SwDCWEGT, SwDCDSTAT, SwDCAPRNC, SwDCSXORI, SwDCFINAN and SwDCOTHER indicate whether the respondent's current wave's spouse agreed with statements about the reason for discrimination, and their values are taken from the spouse's values to SwDCORIGN, SwDCGENDR, SwDCRACE, SwDCAGE, SwDCRLGON, SwDCWEGT, SwDCDSTAT, SwDCAPRNC, SwDCSXORI, SwDCFINAN and SwDCOTHER. In addition to the special missing codes used in SwDCORIGN, SwDCGENDR, SwDCRACE, SwDCAGE, SwDCRLGON, SwDCWEGT, SwDCDSTAT, SwDCAPRNC, SwDCSXORI, SwDCFINAN and SwDCOTHER, SwDCORIGN, SwDCGENDR, SwDCRACE, SwDCAGE, SwDCRLGON, SwDCWEGT, SwDCDSTAT, SwDCAPRNC, SwDCSXORI, SwDCFINAN and SwDCOTHER employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwDCREAS counts how many different reasons for their discrimination that the respondent chooses from a list: ancestry or national origin, gender, race, age, religion, weight, physical disability, an aspect of physical appearance, sexual orientation, financial status, and other. RwDCREAS is calculated as long as one of the component variables is non-missing. Special missing .c is assigned if the respondent is either not eligible for or did not complete the leave behind questionnaire. Special missing .n is assigned if the respondent did not report any experience of discrimination. Special missing .m is assigned if all the component variables had missing values. These variables are assigned plain missing (.) if the respondent did not participate in the current wave.

SwDCREAS indicates the count of reasons for discrimination for the respondent's current wave's spouse, and its value is taken from the spouse's values to RwDCREAS. In addition to the special missing codes used in RwDCREAS, SwDCREAS employs two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

The list of the reasons for discrimination were added in Wave 8.

Please note that religion and financial status were added to the list of reasons in Wave 9, so Wave 8 had a shorter list of reasons for discrimination than the rest of the waves.

## HRS Variables Used:

Wave 8:

## How Constructed:

RwUFDIS indicates whether the respondent has ever been unfairly dismissed from a job.

RwUFHIRE indicates whether the respondent has ever not been hired for a job for unfair reasons.

RwUFDENYP indicates whether the respondent has ever been unfairly denied a promotion.

RwUFPVMOV indicates whether the respondent has ever been unfairly prevented from moving into a neighborhood because the landlord or a Realtor refused to sell or rent a house or apartment.

RwUFDENYB indicates whether the respondent has ever been unfairly denied a bank loan.

RwUFPOLIC indicates whether the respondent has ever been unfairly stopped, searched, questioned, physically threatened, or abused by the police.

RwUFDENYH indicates whether the respondent has ever been unfairly denied health care or treatment.

A code of 1 is assigned if the respondent has experienced the discriminatory behavior. A code of 0 is assigned if the respondent has not experienced the discriminatory behavior. Special missing .c is assigned if the respondent is either not eligible for or did not complete the leave behind questionnaire. Special missing .m is assigned if the respondent is eligible for and completed the leave behind questionnaire but their response for the question is missing. These variables are assigned plain missing (.) if the respondent did not participate in the current wave.

SwUFDIS, SwUFHIRE, SwUFDENYP, SwUFPVMOV, SwUFPVMOV, SwUFDENYB, SwUFPOLIC and SwUFDENYH indicate whether the respondent's current wave's spouse agreed with the statements about unfair lifetime events, and their values are taken from the spouse's values to RwUFDIS, RwUFHIRE, RwUFDENYP, RwUFPVMOV, RwUFPVMOV, RwUFDENYB, RwUFPOLIC and RwUFDENYH. In addition to the special missing codes used in RwUFDIS, RwUFHIRE, RwUFDENYP, RwUFPVMOV, RwUFPVMOV, SwUFDENYB, SwUFDENYB, SwUFPOLIC and SwUFDENYH, SwUFDIS, SwUFHIRE, SwUFDENYP, SwUFPVMOV, SwUFPVMOV, SwUFDENYB, SwUFPOLIC and SwUFDENYH employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwUNFAIR counts how many types of unfair events the respondent experienced in their life. It is a sum of RwUFDIS, RwUFHIRE, RwUFDENYP, RwUFPVMOV, RwUFDENYB, RwUFPOLIC, and starting in Wave 9, RwUFDENYH. RwUNFAIR is calculated as long as at least one component is not missing. RwUNFAIRM counts the number of components with missing values in RwUNFAIR, which could be between no missing components (0) and six missing components (6) for Wave 8, and between no missing components (0) and seven missing components (7) in Waves 9 - 11. Special missing .c is assigned to RwUNFAIR and RwUNFAIRM if the respondent is either not eligible for or did not complete the leave behind questionnaire. Special missing .m is assigned to RwUNFAIR if all components of the respondent's summary score are missing. These variables are assigned plain missing (.) if the respondent did not participate in the current wave.

SwUNFAIR and SwUNFAIRM indicate the count of how many unfair events have ever occurred in the respondent's current wave's spouse's life and how many of those unfair events have missing values respectively, and their values are taken from the spouse's values to RwUNFAIR and RwUNFAIRM. In addition to the special missing codes used in RwUNFAIR and RwUNFAIRM, SwUNFAIR and SwUNFAIRM employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Questions about unfair lifetime discrimination experiences were asked beginning in Wave 8.

The question "Have you ever been unfairly denied health care or treatment?" was added in Wave 9; as a result, Wave 8 had a shorter list of lifetime discrimination experiences than the rest of the waves.

Questions related to unfair lifetime discrimination experiences were no longer asked starting in Wave 12.

## HRS Variables Used:

### Wave 8:

KLB036A	q36a. unfairly dismissed from a job
KLB036B	q36b. ever not been hired for a job
KLB036C	q36c. been unfairly denied a promotion
KLB036D	q36d. prevented fr moving to neighborhood
KLB036E	q36e. been unfairly denied a bank loan
KLB036F	q36f. been unfairly stopped by police
KLBCOMP	mode completed leave behind qnaire

### Wave 9:

LLB036A	q36a. unfairly dismissed from a job
LLB036B	q36b. ever not been hired for a job
LLB036C	q36c. been unfairly denied a promotion
LLB036D	q36d. prevented fr moving to neighborhood
LLB036E	q36e. been unfairly denied a bank loan
LLB036F	q36f. been unfairly stopped by police
LLB036G	q36g. been unfairly denied hlth care
LLBCOMP	mode completed leave behind qnaire

### Wave 10:

MLB036A	q36a. unfairly dismissed from a job
MLB036B	q36b. ever not been hired for a job
MLB036C	q36c. been unfairly denied a promotion
MLB036D	q36d. prevented fr moving to neighborhood
MLB036E	q36e. been unfairly denied a bank loan

MLB036F q36f. been unfairly stopped by police  
MLB036G q36g. been unfairly denied hlth care  
MLBCOMP mode completed leave behind qnaire

## Wave 11:

NLB036A q36a. unfairly dismissed from a job  
NLB036B q36b. ever not been hired for a job  
NLB036C q36c. been unfairly denied a promotion  
NLB036D q36d. prevented fr moving to neighborhood  
NLB036E q36e. been unfairly denied a bank loan  
NLB036F q36f. been unfairly stopped by police  
NLB036G q36g. been unfairly denied hlth care  
NLBCOMP mode completed leave behind qnaire

### How Constructed:

RwUFTASK indicates how often the respondent is unfairly given tasks at work that no one else wants to do in the last 12 months.

RwCLOSLY indicates how often the respondent is watched more closely at work than others in the last 12 months.

RwJKRACE indicates how often the respondent is bothered by their supervisor or coworkers making slurs or jokes about women or racial or ethnic groups at work in the last 12 months.

RwWTTWICE indicates how often the respondent feels they have to work twice as hard as others at work in the last 12 months.

RwNTBOSS indicates how often the respondent feels that they are ignored or not taken seriously by their boss in the last 12 months.

RwWHUML indicates how often the respondent has been unfairly humiliated in front of others at work in the last 12 months.

RwUFTASK, RwcLOSly, RwkKRACE, RwwTTWICE, RwnTBOSS and RwwHUML are coded as follows: 1. never, 2. less than once a year, 3. a few times a year, 4. a few times a month, 5. at least once a week, and 6. almost everyday. Special missing .w is assigned if the respondent indicates they are not currently working. Special missing .c is assigned if the respondent is either not eligible for or did not complete the leave behind questionnaire. Special missing .e is assigned if the respondent answered the question but did not follow the skip pattern as instructed. Special missing .m is assigned if the respondent is eligible for and completed the leave behind questionnaire but their response for the question is missing. These variables are assigned plain missing (.) if the respondent did not participate in the current wave.

SwUFTASK, SwcLOSly, SwkKRACE, SwwTTWICE, SwnTBOSS and SwwHUML indicate how often the respondent's current wave's spouse agrees with the job discrimination statements for the past year, and their values are taken from the spouse's values to RwUFTASK, RwcLOSly, RwkKRACE, RwwTTWICE, RwnTBOSS and RwwHUML. In addition to the special missing codes used in RwUFTASK, RwcLOSly, RwkKRACE, RwwTTWICE, RwnTBOSS and RwwHUML, SwUFTASK, SwcLOSly, SwkKRACE, SwwTTWICE, SwnTBOSS and SwwHUML employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwDCWORK indicates the mean of the six different job discrimination questions (RwUFTASK, RwcLOSly, RwkKRACE, RwwTTWICE, RwnTBOSS and RwwHUML) and can be used as a summary score. RwDCWORK is calculated for any respondent with at least one non-missing value for its six components. RwDCWORKM counts the number of components with missing values in RwDCWORK, which could be between no missing components (0) and six missing components (6). Special missing .c is assigned to RwDCWORK and RwDCWORKM if the respondent is either not eligible for or did not complete the leave behind questionnaire. Special missing .e is assigned to RwDCWORK if the respondent answered the question but did not follow the skip pattern as instructed. Special missing .m is assigned to RwDCWORK if the respondent is eligible for and completed the leave behind questionnaire but their response for the question is missing. These variables are assigned plain missing (.) if the respondent did not participate in the current wave.

SwDCWORK and SwDCWORKM indicate the mean summary score of six different job discrimination questions and the count of any missing components for the respondent's current wave's spouse, and their values are taken from the spouse's values to RwDCWORK and RwDCWORKM. In addition to the special missing codes used in RwDCWORK and SwDCWORKM, SwDCWORK and SwDCWORKM employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

The questions related to work discrimination were added in Wave 8 and were no longer asked starting in Wave 12.

### HRS Variables Used:

Wave 8:

KLB045	q45. currently working
KLB049A	q49a. unfairly given the tasks at work
KLB049B	q49b. watched more closely than others
KLB049C	q49c. bothered by supervisor/coworker
KLB049D	q49d. have to work twice as hard as oth

KLB049E q49e. feel ignored by boss  
KLB049F q49f. unfairly humiliated in frt of oths  
KLBCOMP mode completed leave behind qnaire

## Wave 9:

LLB045 q45. currently working  
LLB049A q49a. unfairly given the tasks at work  
LLB049B q49b. watched more closely than others  
LLB049C q49c. bothered by supervisor/coworker  
LLB049D q49d. have to work twice as hard as oth  
LLB049E q49e. feel ignored by boss  
LLB049F q49f. unfairly humiliated  
LLBCOMP mode completed leave behind qnaire

## Wave 10:

MLB045 q45. currently working  
MLB049A q49a. unfairly given the tasks at work  
MLB049B q49b. watched more closely than others  
MLB049C q49c. bothered by supervisor/coworker  
MLB049D q49d. have to work twice as hard as oth  
MLB049E q49e. feel ignored by boss  
MLB049F q49f. unfairly humiliated  
MLBCOMP mode completed leave behind qnaire

## Wave 11:

NLB079 q79. currently working  
NLB083A q83a. unfairly given the tasks at work  
NLB083B q83b. watched more closely than others  
NLB083C q83c. bothered by supervisor/coworker  
NLB083D q83d. have to work twice as hard as oth  
NLB083E q83e. feel ignored by boss  
NLB083F q83f. unfairly humiliated  
NLBCOMP mode completed leave behind qnaire

### How Constructed:

RwWITWILL indicates whether the respondent has a will that is written and witnessed. In the AHEAD cohorts in Waves 2 and 3 and in the HRS cohort in Wave 3 and onward, the respondent is asked if they currently have a will that is written and witnessed. RwWITWILL is coded as 0 if the respondent does not have a will that is written and witnessed. RwWITWILL is coded as 1 if the respondent does have a will that is written and witnessed. This question is not asked in Wave 1 or in the HRS cohort in Wave 2, and so RwWITWILL is assigned special missing .q in Wave 2. Don't know, refused, or other missing responses are assigned special missing .d, .r, .m, respectively. RwWITWILL is set to plain missing (.) for respondents who did not participate in the current wave.

SwWITWILL indicates whether the respondent's spouse has a will that is written and witnessed, and its values are taken from RwWITWILL. In addition to the special missing codes used in RwWITWILL, SwWITWILL employs two additional special missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwTRUST indicates whether the respondent has a trust. In the HRS cohort in Wave 2, the respondent is asked if they or their husband/wife/partner has put any of their assets into a trust. In the AHEAD and HRS cohorts in Wave 3 and onward, the respondent is asked if they currently have a will that is written and witnessed, at which point the respondent can voluntarily answer that they have a trust in replacement of or in addition to a will. RwTRUST is coded as 0 if the respondent does not have a trust or does not mention a trust. RwTRUST is coded as 1 if the respondent does have a trust or does mention a trust. Wills and trusts are not asked about in HRS Wave 1, so these variables are not available. There is no option for claiming possession of a trust in the AHEAD cohort in Wave 2, and so RwTRUST is assigned special missing .q in Wave 2. Don't know, refused, or other missing responses are assigned special missing .d, .r, .m, respectively. RwTRUST is set to plain missing (.) for respondents who did not participate in the current wave.

SwTRUST indicates whether the respondent's spouse has a trust, and its values are taken from RwTRUST. In addition to the special missing codes used in RwTRUST, SwTRUST employs two additional special missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Neither wills nor trusts are asked about in HRS Wave 1. Only wills are asked about in the AHEAD cohorts in Waves 2 and 3. Only trusts are asked about in the HRS cohort in Wave 2. Starting in the AHEAD and HRS cohorts in Wave 3, the respondent is asked if they currently have a will, but voluntary answers about the possession of a trust in replacement of or in addition to a will are allowed. Starting in HRS Wave 13, interviewers are explicitly instructed not to include living wills when the respondent is asked if they currently have a will.

## HRS Variables Used:

Wave 2 AHEAD:	
B1690	j55. r will: have one
BN_INHH	ahd w1: # r's responding in hhold
Wave 2 HRS:	
W5557	k25.put assets into trus
WN_INHH	hrs w2: # in hhold (r1/r2 only)
Wave 3 AHEAD:	
D4768	j90. r has will
Wave 3 HRS:	
E4769	j323.r has will
Wave 4:	
F5529	j323.r has will
Wave 5:	
G5882	j323.r has will
Wave 6:	
HT001	does r have valid will
Wave 7:	
JT001	does r have valid will
Wave 8:	
KT001	does r have valid will
Wave 9:	
LT001	does r have valid will
Wave 10:	
MT001	does r have valid will
Wave 11:	
NT001	does r have valid will
Wave 12:	
OT001	does r have valid will
Wave 13:	
PT001	does r have valid will
Wave 14:	
QT001	does r have valid will
Wave 15:	
RT001	does r have valid will

<b>Will or Trust: Beneficiaries of Will or Trust</b>

## How Constructed:

RwWILLSP, RwWILLCG, RwWILLRL, RwWILLOT, RwWILLIN, RwWILLFM, RwWILLCH, RwWILLGK, and RwWILLAR indicate whether the respondent made provisions for a person of the specified relationship in their will or trust. RwWILLSP, RwWILLCG, RwWILLRL, RwWILLOT, and RwWILLIN are only available for the HRS cohort in Wave 2. RwWILLSP indicates whether the respondent made provisions for their husband/wife/partner in their will or trust. RwWILLCG indicates whether the respondent made provisions for their child, child-in-law, or grandchild in their trust. RwWILLRL indicates whether the respondent made provisions for another relative in their trust. RwWILLOT indicates whether the respondent made provisions for someone else in their trust. RwWILLIN indicates whether the respondent made provisions for an institution or charity in their trust. RwWILLFM, RwWILLCH, RwWILLGK, and RwWILLAR are available starting in Wave 3, in addition to the AHEAD cohort in Wave 2. RwWILLFM indicates whether the respondent made provisions for family members other than their husband/wife/partner in their will or trust. RwWILLCH indicates whether the respondent made provisions for a child or step-child in their will or trust. RwWILLGK indicates whether the respondent made provisions for a grandchild directly in their will or trust. RwWILLAR indicates whether the respondent made provisions for a charity or institution in their will or trust. These variables are assigned a 0 if the respondent did not report making provisions for a person of the specified relationship in their will or trust, and are assigned a 1 if the respondent did report making provisions for a person of the specified relationship in their will or trust.

In HRS Wave 2, the respondent is first asked if they or their spouse/partner have a trust, and if so, are given the option of selecting up to 5 recipients in a single question. RwWILLSP is coded as 0 if the spouse is not selected, and is coded as 1 if the spouse is selected. RwWILLCG is coded as 0 if child, child-in-law, or grandchild is not selected, and is coded as 1 if child, child-in-law, or grandchild is selected. RwWILLRL is coded as 0 if other relative is not selected, and is coded as 1 if other relative is selected. RwWILLOT is coded as 0 if someone else is not selected, and is coded as 1 if someone else is selected. RwWILLIN is coded as 0 if institution or charity is not selected, and is coded as 1 if institution or charity is selected. RwWILLSP, RwWILLCG, RwWILLRL, RwWILLOT, and RwWILLIN are assigned special missing .t if the respondent does not have a trust. RwWILLSP, RwWILLCG, RwWILLRL, and RwWILLIN are not available in any wave besides the HRS cohort in Wave 2 because the questions are asked differently. RwWILLSP, RwWILLCG, RwWILLRL, RwWILLOT, and RwWILLIN are assigned special missing .q in Wave 2 if the respondent was part of AHEAD cohort in Wave 2 and not asked these questions. Don't know, refused, or other missing responses are assigned special missing .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not participate in the current wave.

In the AHEAD cohorts in Waves 2 and 3 and the HRS cohort in Wave 3 and onward, the respondent is first asked if they currently have a will. If they answer positively, they are then asked whether the will or trust provides for any family members other than the spouse. RwWILLFM is coded as 0 if the answer is negative, and is coded as 1 if the answer is positive. In the AHEAD cohort in Wave 2, if they provide for family members other than the spouse, they are asked whether the will or trust provides for any children or step-children. Starting in the AHEAD and HRS cohorts in Wave 3 and onward, if they provide for family members other than the spouse and have children, they are asked whether the will or trust provides for any children or step-children. RwWILLCH is coded as 0 if the answer is negative or the respondent did not provide for family members other than the spouse, and is coded as 1 if the answer is positive. In the AHEAD cohorts in Waves 2 and 3 and the HRS cohort in Wave 3 and onward, if the respondent has a will, they are asked whether the will or trust provides for any charities. RwWILLAR is coded as 0 if the answer is negative, and is coded as 1 if the answer is positive. In the AHEAD cohorts in Waves 2 and 3 and the HRS cohort in Wave 3 and onward, RwWILLFM, RwWILLCH, and RwWILLAR are assigned special missing .w if the respondent does not have a will or trust. In the AHEAD and HRS cohorts in Wave 3 and onward, RwWILLCH is assigned special missing .k if the respondent does not have any children and so the question is not asked. RwWILLFM, RwWILLCH, and RwWILLAR are not available for the HRS cohort in Wave 2 because the questions are asked differently, and so are assigned special missing .q in Wave 2. Don't know, refused,

or other missing responses are assigned special missing .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not participate in the current wave.

Questions about whether the respondent provided for their grandchildren in their will have changed significantly over the waves of HRS, in particular there are differences in whether the family respondent and whether respondents without grandchildren were asked this question. In the AHEAD cohort in Wave 2 and the AHEAD cohort in Wave 3 CAPI versions 1-4, if the respondent reports that they provide for family members other than the spouse and the respondent has grandchildren and are the family respondent, they are asked if the will or trust provides for any grandchild directly. In the AHEAD cohort in Wave 3 in CAPI versions 5 and greater, if the respondent reports that they provide for family members other than the spouse, they are asked if the will or trust provides for any grandchild directly (regardless if they have any grandchildren or if they are the family respondent). In the HRS cohort in Wave 3 and in Wave 4, if the respondent reports that they provide for family members other than the spouse and the respondent has grandchildren and are the family respondent, they are asked if the will or trust provides for any grandchild directly. In Wave 5, respondents provide both a count of number of total grandchildren and a number of household grandchildren. If the family respondent provides for family members other than the spouse and the respondent has grandchildren (either from the total report or the number of grandchildren in the house), they are asked if the will or trust provides for any grandchild directly. If the non-family respondent provides for family members other than the spouse and the respondent reports grandchildren as household members, they are asked if the will or trust provides for any grandchild directly. In the case that the non-family respondent reports that they do not have grandchildren as household members they are not asked about whether they provided for their grandchildren in their will. There was also an issue at Wave 5 where some respondents who report that they have no grandchildren as household members and no total grandchildren were still asked whether they provided for grandchildren in their will.

In Waves 6-8, if the respondent reports that they provide for family members other than the spouse and the respondent has grandchildren and are the family respondent, they are asked if the will or trust provides for any grandchild directly. Starting in Wave 9 for family respondents, if the family respondent reports that they provide for family members other than the spouse and the respondent has grandchildren and are the family respondent, they are asked if the will or trust provides for any grandchild directly. Starting in Wave 9 for non-family respondents, non-family respondents are only asked whether they have made provisions for their grandchild if they reported in previous waves that they have grandchildren. In the Wave 9 CAPI versions 1 and 2, there was an error which caused all non-family respondents to not be asked whether they made provisions for their grandchildren. In Wave 14, there is a larger percentage of respondents who are not in contact with any of their children, and so are not asked about the number of grandchildren they have or whether anything was left directly to grandchildren in their will or trust.

RwWILLGK is coded as 0 if the answer is negative, the respondent replies that grandchildren receive something only through their parents, or the respondent did not provide for family members other than the spouse, and is coded as 1 if the grandchildren are provided for directly. RwWILLGK is assigned special missing .f if the respondent is not the family respondent and is not asked whether they made provisions for their grandchildren in their will or trust. RwWILLGK is assigned special missing .w if the respondent does not have a will or trust. RwWILLGK is assigned special missing .g if the respondent does not have any grandchildren, or if they reported having no grandchildren at the previous wave and no new grandchildren at the current wave. RwWILLGK is assigned special missing .c starting in Wave 14 if the respondent is not in contact with any of their children and so this question is skipped. RwWILLGK is not available for the HRS cohort in Wave 2 because the question is asked differently, so is assigned special missing .q in Wave 2. Don't know, refused, or other missing responses are assigned special missing .d, .r, .m, respectively. RwWILLGK is set to plain missing (.) for respondents who did not participate in the current wave.

SwWILLSP, SwWILLCG, SwWILLRL, SwWILLOT, SwWILLIN, SwWILLFM, SwWILLCH, SwWILLGK, and SwWILLAR indicate whether the respondent's spouse made provisions for a person of the specified relationship in their will or trust, and their values are taken from RwWILLSP, RwWILLCG, RwWILLRL, RwWILLOT, RwWILLIN, RwWILLFM, RwWILLCH, RwWILLGK, and RwWILLAR. In addition to the special missing codes used in RwWILLSP, RwWILLCG, RwWILLRL, RwWILLOT, RwWILLIN, RwWILLFM, RwWILLCH, RwWILLGK, and RwWILLAR, SwWILLSP, SwWILLCG, SwWILLRL, SwWILLOT, SwWILLIN, SwWILLFM, SwWILLCH, SwWILLGK, and SwWILLAR employ the use of two additional special missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Neither wills nor trusts are asked about in HRS Wave 1. Only wills are asked about in the AHEAD cohort in Wave 2. Only trusts are asked about in the HRS cohort in Wave 2. Starting in the AHEAD and HRS cohorts in Wave 3, the respondent is asked if they currently have a will, but voluntary answers about the possession of a trust in replacement of or in addition to a will are allowed.

In the HRS cohort in Wave 2, the respondent selects the potential recipients of their trust in a single question, and are allowed to select all that apply. In addition, the categories of relationship are different: spouse, child/child-in-law/grandchild, other relative, someone else, or institution or charity.

In the AHEAD cohorts in Waves 2 and 3 and the HRS cohort in Wave 3 and onward, the respondent is asked about the potential recipients of their will or trust in separate questions. The categories of relationship for these waves are: family other than spouse/partner, children, grandchildren directly, or charity. In the AHEAD cohort in Wave 2, respondents who report having a will or trust and making provisions for family other than spouse/partner, are asked about providing for children. Starting in the AHEAD and HRS cohorts in Wave 3, respondents who have no children are not asked this question even if they meet the previous criteria.

As the result of these differences, the HRS cohort in Wave 2 has separate variables for all relationships.

Questions about whether the respondent provided for their grandchildren in their will have changed significantly over the waves of HRS, in particular there are differences in whether the family respondent and whether respondents without grandchildren were asked this question. In the AHEAD cohort in Wave 2 and the AHEAD cohort in Wave 3 CAPI versions 1-4, if the respondent reports that they provide for family members other than the spouse and the respondent has grandchildren and are the family respondent, they are asked if the will or trust provides for any grandchild directly. In the AHEAD cohort in Wave 3 in CAPI versions 5 and greater, if the respondent reports that they provide for family members other than the spouse, they are asked if the will or trust provides for any grandchild directly (regardless if they have any grandchildren or if they are the family respondent). In the HRS cohort in Wave 3 and in Wave 4, if the respondent reports that they provide for family members other than the spouse and the respondent has grandchildren and are the family respondent, they are asked if the will or trust provides for any grandchild directly. In Wave 5, respondents provide both a count of number of total grandchildren and a number of household grandchildren. If the family respondent provides for family members other than the spouse and the respondent has grandchildren (either from the total report or the number of grandchildren in the house), they are asked if the will or trust provides for any grandchild directly. If the non-family respondent provides for family members other than the spouse and the respondent reports grandchildren as household members, they are asked if the will or trust provides for any grandchild directly. In the case that the non-family respondent reports that they do not have grandchildren as household members they are not asked about whether they provided for their grandchildren in their will. There was also an issue at Wave 5 where some respondents who report that they have no grandchildren as household members and no total grandchildren were still asked whether they provided for grandchildren in their will.

In Waves 6-8, if the respondent reports that they provide for family members other than the spouse and the respondent has grandchildren and are the family respondent, they are asked if the will or trust provides for any grandchild directly. Starting in Wave 9 for family respondents, if the family respondent reports that they provide for family members other than the spouse and the respondent has grandchildren and are the family respondent, they are asked if the will or trust provides for any grandchild directly. Starting in Wave 9 for non-family respondents, non-family respondents are only asked whether they have made provisions for their grandchild if they reported in previous waves that they have grandchildren. In the Wave 9 CAPI versions 1 and 2, there was an error where no non-family respondents were asked whether they had made provisions for their grandchildren. In Wave 14, there is a larger percentage of respondents who are not in contact with any of their children, and so are not asked about the number of grandchildren they have or whether anything was left directly to grandchildren in their will or trust.

## How Constructed:

RwLVWILL indicates whether the respondent has written instructions about the type of medical treatment or care they would want to receive if they could not make those decisions themselves, sometimes called a living will. This question is asked to a small subsample of people in an experimental module in the AHEAD and HRS cohorts in Wave 3. This question is asked starting in Wave 11 to all respondents aged 65 and older. Starting in Wave 12, those who previously reported not having a living will are asked the same question, but those who previously reported having a living will are asked to confirm this arrangement. RwLVWILL is coded as 0 if the respondent does not have a living will. RwLVWILL is coded as 1 if the respondent does have a living will. Starting in Wave 12, RwLVWILL is also coded as 0 if the respondent disputes their previous wave record and reports not having a living will, and is also coded as 1 if the respondent confirms having a living will but reports that the arrangement has changed or if the respondent disputes their previous wave record but now has a living will. If the respondent disputes having a living will in the previous wave record, then RwLVWILL in the previous waves are set to 0. If the respondent was not selected for the subsample in the AHEAD and HRS cohorts in Wave 3, then RwLVWILL is assigned special missing .b in Wave 3. Starting in Wave 11, if the respondent is under age 65, then RwLVWILL is assigned special missing .a. RwLVWILL is not available in Waves 1, 2, and 4 through 10 because this question is not asked. Don't know, refused, or other missing responses are assigned special missing .d, .r, .m, respectively. RwLVWILL is set to plain missing (.) for respondents who did not participate in the current wave.

SwLVWILL indicates whether the respondent's spouse has a living will, and its values are taken from RwLVWILL. In addition to the special missing codes used in RwLVWILL, SwLVWILL employs two additional special missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Starting in Wave 12, respondents who previously reported having a living will are asked to confirm their arrangement. RwFLVWILL is a flag indicating whether the respondent has changed or disputes the arrangement reported in a previous wave. RwFLVWILL is coded as 1 if the respondent confirms having a living will but reports that the arrangement has changed. RwFLVWILL is coded as 2 if the respondent disputes the previous wave record but reports now having a living will. RwFLVWILL is coded as 3 if the respondent disputes the previous wave record and does not have a living will. RwFLVWILL is coded as 0 otherwise. RwFLVWILL is not available in any waves prior to Wave 12 because there is no opportunity to dispute their arrangement prior to this wave. RwFLVWILL is set to plain missing (.) for respondents who did not participate in the current wave.

SwFLVWILL is a flag indicating whether the respondent's spouse has changed or disputes the arrangement reported in a previous wave, and its values are taken from RwFLVWILL. SwFLVWILL employs two special missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwLMT CARE indicates whether the respondent's living will expresses a desire to limit the care or medical treatment that they receive in certain situations. If the respondent reports having a living will, or starting in Wave 12, reports that their arrangement has changed or that they dispute the previous wave record but now have a living will, the respondent is asked whether the instructions express a desire to limit care. RwLMT CARE is coded as 0 if the respondent's living will does not express a desire to limit

care. RwlMTCARE is coded as 1 if the respondent's living will does express a desire to limit care. RwlMTCARE is assigned special missing .n if the respondent reports not having any living will. If the respondent disputes having a living will in the previous wave record, then RwlMTCARE in the previous waves is set to .n. RwlMTCARE is assigned special missing .a if the respondent is not asked about having a living will because they are under age 65. This question is only asked starting in Wave 11, and so RwlMTCARE is only available starting in Wave 11. Don't know, refused, or other missing responses are assigned special missing .d, .r, .m, respectively. RwlMTCARE is set to plain missing (.) for respondents who did not participate in the current wave.

SwlMTCARE indicates whether the respondent's spouse's living will expresses a desire to limit the care or medical treatment that they receive in certain situations, and its values are taken from RwlMTCARE. In addition to the special missing codes used in RwlMTCARE, SwlMTCARE employs two additional special missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

In the AHEAD and HRS cohorts in Wave 3, only a small subsample of respondents are asked whether they have written instructions about the type of medical treatment they would want to receive if they were unconscious or somehow unable to communicate.

In Wave 11, all respondents aged 65 and older are asked whether they have provided written instructions about the care or medical treatment that they would want to receive if they cannot make those decisions themselves, which is sometimes called a "living will". Starting in Wave 12, the same question is asked if the respondent did not have such instructions in the previous wave. Starting in Wave 12, if the respondent has previously reported having such instructions, they are asked if this arrangement is still in place, at which point they can confirm whether the arrangement is the same or not, confirm that instructions are in place but the arrangement has changed, or dispute the previous wave record and they either now have or now do not have the arrangement. The ability to dispute a previous report necessitates the introduction of a flag variable in Wave 12.

In Wave 11, the respondent is asked whether their instructions express a desire to limit care if the respondent reports having written instructions about care. Starting in Wave 12, the respondent is asked this question as long as they report currently having written instructions about care, even if they dispute or have changed their previous report.

These questions are not asked at all in Wave 1, the AHEAD or HRS cohorts in Wave 2, and in Waves 4 through 10.

## HRS Variables Used:

### Wave 3 AHEAD:

D218	cs1a.proxy/self interview
D528	which module
D5636	m6-0.intro
D5654	m6-5.written type med

### Wave 3 HRS:

E528	which module
E5376	m-all.intro
E5781	m7-5.written type med

### Wave 11:

NA019	r current age calculation
NT250	r has written living will
NT251	living will contain limiting care

### Wave 12:

OA019	r current age calculation
OT250	r has written living will
OT251	living will contain limiting care

### Wave 13:

PA019	r current age calculation
PT250	r has written living will

PT251	living will contain limiting care
Wave 14:	
QA019	r current age calculation
QT250	r has written living will
QT251	living will contain limiting care
Wave 15:	
RA019	r current age calculation
RT250	r has written living will
RT251	living will contain limiting care

<b>Durable Power of Attorney for Healthcare</b>

### How Constructed:

RwDPOAFH indicates whether the respondent has a Durable Power of Attorney for Health Care, someone who can legally make decisions about their care or medical treatment if they cannot make those decisions themselves. This question is asked to a small subsample of people in an experimental module in the AHEAD and HRS cohorts in Wave 3. This question is asked starting in Wave 11 to all respondents aged 65 and older. Starting in Wave 12, those who previously reported not having a Durable Power of Attorney for

Health Care are asked the same question, but those who previously reported having a Durable Power of Attorney for Health Care are asked to confirm this arrangement. RwdPOAFH is coded as 0 if the respondent has no Durable Power of Attorney for Health Care. RwdPOAFH is coded as 1 if the respondent does have a Durable Power of Attorney for Health Care. Starting in Wave 12, RwdPOAFH is also coded as 0 if the respondent disputes the previous wave record and reports not having the arrangement, and is also coded as 1 if the respondent reports having the arrangement but it has changed or if the respondent disputes the previous wave record and now has the arrangement. If the respondent disputes having a Durable Power of Attorney for Health Care in the previous wave record, then RwdPOAFH in the previous waves are set to 0. If the respondent was not selected for the subsample in the AHEAD and HRS cohorts in Wave 3, then RwdPOAFH is assigned special missing .b in Wave 3. Starting in Wave 11, if the respondent is under age 65, then RwdPOAFH is assigned special missing .a. RwdPOAFH is not available in Waves 1, 2, or 4 through 10 because this question is not asked. Don't know, refused, or other missing responses are assigned special missing .d, .r, .m, respectively. RwdPOAFH is set to plain missing (.) for respondents who did not participate in the current wave.

SwDPOAFH indicates whether the respondent's spouse has a Durable Power of Attorney for Health Care, and its values are taken from RwdPOAFH. In addition to the special missing codes used in RwdPOAFH, SwDPOAFH employs two additional special missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Starting in Wave 12, respondents who previously reported having a Durable Power of Attorney for Health Care are asked to confirm their arrangement. RwfDPOAFH is a flag indicating whether the respondent has changed or disputes the arrangement reported in a previous wave. RwfDPOAFH is coded as 1 if the respondent confirms having instructions but reports that the arrangement has changed. RwfDPOAFH is coded as 2 if the respondent disputes the previous wave record but reports now having the arrangement. RwfDPOAFH is coded as 3 if the respondent disputes the previous wave record and does not have the arrangement. RwfDPOAFH is coded as 0 otherwise. RwfDPOAFH is not available in any waves prior to Wave 12 because there is no opportunity to dispute their arrangement prior to this wave. RwfDPOAFH is set to plain missing (.) for respondents who did not participate in the current wave.

SwFDPOAFH is a flag indicating whether the respondent's spouse has changed or disputes the arrangement reported in a previous wave, and its values are taken from RwfDPOAFH. SwFDPOAFH employs two special missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwdPOASP, RwdPOACH, RwdPOARL, RwdPOAFR, RwdPOADR, RwdPOARA, RwdPOALP, RwdPOASW, and RwdPOAOT indicate whether a person with the specified relationship was mentioned being a Durable Power of Attorney for the respondent. The respondent selects the relationship of who will serve as the Durable Power of Attorney from a drop-down list, and can select multiple people starting in Wave 11. RwdPOASP indicates if the respondent's spouse or partner will be a Durable Power of Attorney. RwdPOACH indicates if the respondent's child, child-in-law, or grandchild will be a Durable Power of Attorney. RwdPOARL indicates if another relative of the respondent will be a Durable Power of Attorney. RwdPOAFR indicates if the respondent's friend will be a Durable Power of Attorney. RwdPOADR indicates if the respondent's physician or healthcare professional will be a Durable Power of Attorney. RwdPOARA indicates if the respondent's minister, rabbi, priest, or religious advisor will be a Durable Power of Attorney. RwdPOALP indicates if the respondent's attorney will be a Durable Power of Attorney. RwdPOASW indicates if a social worker will be the respondent's Durable Power of Attorney. RwdPOAOT indicates if some other person will be the respondent's Durable Power of Attorney. RwdPOASP, RwdPOACH, RwdPOARL, RwdPOAFR, RwdPOADR, RwdPOARA, RwdPOALP, RwdPOASW, and RwdPOAOT are coded as 0 if the relationship is not mentioned as being a Durable Power of Attorney, and are coded as 1 if the relationship is mentioned as being a Durable Power of Attorney. These variables are assigned special missing .n if the deceased respondent did not have a Durable Power of Attorney. If the respondent disputes having a Durable Power of Attorney for Health Care in the previous wave record in Wave 12, then these variables in the previous waves are set to .n. If the respondent was not selected for the subsample in the AHEAD and HRS cohorts in Wave 3, then these variables are assigned special missing .b in Wave 3. Starting in Wave 11, if the respondent is under age 65, then these variables are assigned special missing .a. These variables are not available in HRS Waves 1, 2, or 4 through 10 because this question is not asked. Don't know, refused, or other missing responses are assigned special missing .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not participate in the current wave.

SwDPOASP, SwDPOACH, SwDPOARL, SwDPOAFR, SwDPOADR, SwDPOARA, SwDPOALP, SwDPOASW, and SwDPOAOT indicate whether a person with the specified relationship was mentioned being a Durable Power of Attorney for the respondent's spouse, and their values are taken from the respondent variables. In addition to the special missing codes used in the respondent variables, the spouse variables employ two additional special missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

In the AHEAD and HRS cohorts in Wave 3, only a small subsample of respondents are asked whether they have a Durable Power of Attorney for Health Care.

In Wave 11, all respondents aged 65 and older are asked whether they have a Durable Power of Attorney for Health Care. Starting in Wave 12, the same question is asked if the respondent did not have a Durable Power of Attorney for Health Care in the previous wave. Starting in Wave 12, if the respondent has previously reported having a Durable Power of Attorney for Health Care, they are asked if this arrangement is still in place, at which point they can confirm whether the arrangement is the same or not, confirm that instructions are in place but the arrangement has changed, or dispute the previous wave record and they either now have or now do not have the arrangement. The ability to dispute a previous report necessitates the introduction of a flag variable in Wave 12.

In Wave 11, the respondent is asked who has the authority if they report having a Durable Power of Attorney for Health Care. Starting in Wave 12, the respondent is asked this question as long as they report currently having a Durable Power of Attorney for Health Care, even if they dispute or have changed their previous report. In AHEAD Wave 2 and HRS Wave 3, the respondent can only select one person with the authority to make decisions. In Wave 11 and starting in Wave 13, up to 4 relationships are selected, and in Wave 12, up to 5 relationships are selected.

These questions are not asked at all in Wave 1, the AHEAD or HRS cohorts in Wave 3, or in Waves 4 through 10.

## HRS Variables Used:

### Wave 3 AHEAD:

D218	cs1a.proxy/self interview
D528	which module
D5636	m6-0.intro
D5647	m6-4.legal arrangements
D5648	m6-4a.who authority

### Wave 3 HRS:

E528	which module
E5376	m-all.intro
E5776	m7-4.legal arrangements
E5777	m7-4a.who authority

### Wave 11:

NA019	r current age calculation
NT246	assign durable power of attorney
NT247M1	who has durable power of attorney -1
NT247M2	who has durable power of attorney -2
NT247M3	who has durable power of attorney -3
NT247M4	who has durable power of attorney -4

### Wave 12:

OA019	r current age calculation
OT246	assign durable power of attorney
OT247M1	who has durable power of attorney -1
OT247M2	who has durable power of attorney -2
OT247M3	who has durable power of attorney -3
OT247M4	who has durable power of attorney -4
OT247M5	who has durable power of attorney -5

### Wave 13:

PA019	r current age calculation
-------	---------------------------

PT246	assign durable power of attorney
PT247M1	who has durable power of attorney -1
PT247M2	who has durable power of attorney -2
PT247M3	who has durable power of attorney -3
PT247M4	who has durable power of attorney -4
Wave 14:	
QA019	r current age calculation
QT246	assign durable power of attorney
QT247M1	who has durable power of attorney -1
QT247M2	who has durable power of attorney -2
QT247M3	who has durable power of attorney -3
QT247M4	who has durable power of attorney -4
Wave 15:	
RA019	r current age calculation
RT246	assign durable power of attorney
RT247M1	who has durable power of attorney -1
RT247M2	who has durable power of attorney -2
RT247M3	who has durable power of attorney -3
RT247M4	who has durable power of attorney -4

## How Constructed:

RwNLFINS indicates the total number of life insurance policies the respondent reports having. In Wave 1, the AHEAD and HRS cohorts in Wave 2, and the AHEAD cohort in Wave 3, RwNLFINS takes the sum of the number of term and whole life insurance policies the respondent reports having. In the HRS cohort in Wave 3 and onward, RwNLFINS takes the value of the total number of life insurance policies the respondent reports having. RwNLFINS can take the values of 0 to 5, and if the respondent reports having more than 5 policies, then RwNLFINS takes the value of 5. RwNLFINS is assigned a value of 0 if the respondent reports having no life insurance policies. Don't know, refused, or other missing responses are assigned special missing .d, .r, .m, respectively. RwNLFINS is set to plain missing (.) for respondents who did not participate in the current wave.

SwNLFINS indicates the total number of life insurance policies the respondent's spouse reports having, and its values are taken from RwNLFINS. In addition to the special missing codes used in RwNLFINS, SwNLFINS employs two additional special missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwLIFEINV indicates the total value of the respondent's life insurance policies. In Wave 1, the AHEAD and HRS cohorts in Wave 2, and the AHEAD cohort in Wave 3, RwLIFEINV takes the sum of the values of the term and whole life insurance policies the respondent reports having. In the HRS cohort in Wave 3 and onward, RwLIFEINV takes the value of the life insurance policies altogether. If the respondent reports having no life insurance policies or no term and no whole life policies, then RwLIFEINV takes a value of 0. Don't know, refused, or other missing responses are assigned special missing .d, .r, .m, respectively. RwLIFEINV is set to plain missing (.) for respondents who did not participate in the current wave.

SwLIFEINV indicates the total value of the respondent's spouse's life insurance policies, and its values are taken from RwLIFEINV. In addition to the special missing codes used in RwLIFEINV, SwLIFEINV employs two additional special missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

In Wave 1, the AHEAD and HRS cohorts in Wave 2, and the AHEAD cohort in Wave 3, the respondent is first asked whether they have any life insurance policies. If they report having life insurance policies, they are then asked whether any are group or individual term insurance policies, and if so, the number and the total value of the term insurance policies. If they report having life insurance policies, they are then asked whether they have any life insurance policies that build up a cash value or that you can borrow on, which are sometimes called "whole life" or "straight life", and if so, the number and the total value of the whole life insurance policies. In Wave 1, the respondent can report up to 25 term or whole life policies. In the AHEAD cohort in Wave 2, the respondent can report 1, 2, 3, or 4 or more term or whole life policies. In the HRS cohort in Wave 2, the respondent can report up to 20 term or whole life policies. In the AHEAD cohort in Wave 3, the respondent can report a continuous number of 1 to 9, or 10 or more term or whole life policies.

In the HRS cohort in Wave 3 and in Wave 4, the respondent is first asked whether they have any life insurance policies. If they report having life insurance policies, they are then asked for the total number of different life insurance policies. In the HRS cohort in Wave 3, if the respondent only has one life insurance policy, they are asked the face value of this policy, and if the respondent reports having 2 or more life insurance policies, then they are asked the total face value of these policies. In Wave 4,

the respondent is asked the total face value of the policies, whether one or more, in a single question. In both waves, the respondent can report 1, 2, 3, 4, or 5 or more total policies. In both waves, the respondent is not asked about term versus whole life policies.

In HRS Wave 3 there are over 1,000 cases where the respondent reported having one life insurance policy but appears to not have been asked what was the value of this policy, for an unknown reason. These cases are assigned special missing .m in RwlIFEINV.

Starting in Wave 5, the respondent is first asked whether they have any life insurance policies. If they report having life insurance policies, they are then asked for the total number of different life insurance policies and for the total value of those policies. If they report having life insurance policies, they are then asked if any of the policies are ones that build up a cash value that you can borrow against, or that you would receive if the policy were to be cancelled, which are sometimes called "whole life" or "straight life policies", and if so, the number and the total value of the whole life insurance policies. The respondent can report 1, 2, 3, 4, or 5 or more total policies or whole life policies. In these waves, the respondent is not asked specifically about term policies.

## How Constructed:

RwLFINSSP, RwLFINSCH, RwLFINSCG, RwLFINSKG, RwLFINSRL, RwLFINSOR, and RwLFINSOT indicate whether someone with the specified relationship is named a beneficiary of the respondent's life insurance, including term and whole life policies. RwLFINSOR is only available in Wave 1 and for the HRS cohort in Wave 3, and RwLFINSCG is only available in the AHEAD cohorts in Waves 2 and 3. The respondent is able to select multiple relationships at each wave. RwLFINSSP indicates whether the respondent's spouse/partner is named as a beneficiary of their life insurance. RwLFINSCH indicates whether the respondent's child, all children, step/partner child, child-in-law, son, stepson, son-in-law, daughter, stepdaughter, daughter-in-law, unlisted child or child-in-law, unknown/ambiguous child, ambiguous child-in-law relationship, former step-child, former child-in-law, or deceased child are named as a beneficiary of their life insurance. RwLFINSCG indicates whether the respondent's child/child-in-law/grandchild (which cannot be distinguished from each other) are named as a beneficiary of their life insurance. RwLFINSKG indicates whether the respondent's grandchild, all grandchildren, or spouse/partner of grandchild are named as a beneficiary of their life insurance. RwLFINSRL indicates whether other relatives, sibling, sibling of spouse, parent, parent-in-law, father, father-in-law, mother, mother-in-law, brother, brother-in-law, sister, sister-in-law, or unknown in-law are named as a beneficiary of their life insurance. RwLFINSOR indicates whether a relative besides a child or grandchild or someone else non-related to the respondent is named as a beneficiary of their life insurance. RwLFINSOT indicates whether someone else, other non-relatives, other, professional, other individual, organization, employee of institution, paid helper, professional, specified professional, late spouse/partner, ex-spouse/partner, or person of unknown relationship are named as a beneficiary of their life insurance. RwLFINSSP, RwLFINSCH, RwLFINSCG, RwLFINSKG, RwLFINSRL, RwLFINSOR, and RwLFINSOT are coded as 0 if the appropriate relationship is not mentioned as a beneficiary of their life insurance, and coded as 1 if the appropriate relationship is mentioned as being a beneficiary of their life insurance. In HRS Wave 1 and the AHEAD cohorts in Waves 2 and 3, the variables indicate whether a person of the specified relationship is a beneficiary of a term or whole life policy, which are asked about separately. In the HRS cohort in Wave 3 and onward, the variables indicate whether a person of the specified relationship is a beneficiary of any life insurance policy.

In HRS Wave 1, the respondent can select from spouse, children, and others, as such, RwLFINSSP, RwLFINSCH, and RwLFINSOR are used this wave and RwLFINSKGK, RwLFINSRL, RwLFINSOT, and RwLFINSCG are not available in this wave. In this wave, RwLFINSOR includes other relatives or non-relatives.

In the AHEAD cohort in Wave 2, the respondent can select from spouse/partner, child/child-in-law/grandchild, other relative, and someone else, as such, RwLFINSSP, RwLFINSCG, RwLFINSRL, and RwLFINSOT are used this wave and RwLFINSCH, RwLFINSKGK, and RwLFINSOR are not available in this wave. In this wave, RwLFINSOT only includes other non-relatives. Because the HRS cohort in Wave 2 does not ask about beneficiaries, respondents in Wave 2 are assigned special missing .q for RwLFINSSP, RwLFINSCG, RwLFINSRL, and RwLFINSOT.

In the AHEAD cohort in Wave 3, the respondent can select from spouse/partner, child/child-in-law/grandchild, other relative, someone else, and other, as such RwLFINSSP, RwLFINSCG, RwLFINSRL, and RwLFINSOT are used this wave and RwLFINSCH, RwLFINSKGK, and RwLFINSOR are not available in this wave. In the HRS cohort in Wave 3, the respondent can select from spouse/partner, all children, grandchild, other, or name a person assigned an other person number (OPN) from the Preload Household Member Child (PRMC) file, as such, RwLFINSSP, RwLFINSCH, RwLFINSKGK, RwLFINSRL, and RwLFINSOR are used and RwLFINSCG and RwLFINSOT are not available. Because of the different categorizations between these two waves, RwLFINSCH, RwLFINSKGK, and RwLFINSOT are assigned special missing .q in Wave 3 if the respondent is in the HRS cohort in Wave 3, and RwLFINSCG and RwLFINSOR are assigned special missing .q in Wave 3 if the respondent is in the AHEAD cohort in Wave 3. Please note the use of RwLFINSOT for the AHEAD questionnaire in Wave 3 which includes only non-relatives, whereas RwLFINSOR is used for the HRS questionnaire in Wave 3 which can include relative or non-relatives.

Starting in Wave 4, the respondent can select from a list or choose any person with an OPN from the PRMC file. In these waves, RwLFINSSP, RwLFINSCH, RwLFINSKGK, RwLFINSRL, and RwLFINSOT are available, and RwLFINSCG and RwLFINSOR are no longer available. In these waves, RwLFINSOT includes other non-relatives.

In all waves, RwLFINSSP, RwLFINSCH, RwLFINSKGK, RwLFINSRL, RwLFINSOR, RwLFINSOT, and RwLFINSCG are assigned special missing .n if the respondent has no life insurance policies. Don't know, refused, or other missing responses are assigned special missing .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not participate in the current wave.

SwLFINSSP, SwLFINSCH, SwLFINSCG, SwLFINSKGK, SwLFINSRL, SwLFINSOR, and SwLFINSOT indicate whether someone with the specified relationship is named a beneficiary of the respondent's spouse's life insurance, including term and whole life policies, and their values are taken from RwLFINSSP, RwLFINSCH, RwLFINSCG, RwLFINSKGK, RwLFINSRL, RwLFINSOR, and RwLFINSOT. In addition to the special missing codes used in the respondent variables, the spouse variables employ two additional special missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

In Wave 1 and the AHEAD cohorts in Waves 2 and 3, the respondent is first asked whether they have any life insurance policies. If they report having life insurance policies, they are then asked whether any are group or individual term insurance policies, and if so, the beneficiaries of the term insurance policies. If they report having life insurance policies, they are then asked whether they have any life insurance policies that build up a cash value or that you can borrow on, which are sometimes called "whole life" or "straight life", and if so, the beneficiaries of the whole life insurance policies. In Wave 1, the respondent can select all that apply from a list that includes the respondent's spouse, children, and others for term and whole life policies. In the AHEAD cohort in Wave 2, the respondent can select all that apply from a list that includes the respondent's spouse/partner, child/child-in-law/grandchild, other relative, and someone else for term and whole life policies. In the AHEAD cohort in Wave 3, the respondent can select all that apply from a list that includes the respondent's spouse/partner, child/child-in-law/grandchild, other relative, someone else, and other for term and whole life policies.

In the HRS cohort in Wave 2, the respondent is first asked whether they have any life insurance policies, and separately about having term insurance policies and whole life insurance policies. However, the respondent is not asked who the beneficiary of these policies would be.

In the HRS cohort in Wave 3 and in Wave 4, the respondent is first asked whether they have any life insurance policies. If they report having life insurance policies, they are then asked for the beneficiaries of the life insurance policies. In the HRS cohort in Wave 3, the respondent can select all that apply from a list that includes the respondent's spouse/partner, all children, grandchild, other, or name any person that was assigned an other person number (OPN) in the Preload Household Member Child (PRMC) file. In Wave 4, the respondent can select all that apply from a list that includes the respondent's spouse/partner, all children, other (including churches, charitable organizations, ex-spouses and other persons), or name any person that was assigned an OPN in the PRMC file. In both waves, the respondent is not asked about term versus whole life policies.

Starting in Wave 5, the respondent is first asked whether they have any life insurance policies. If they report having life insurance policies, they are then asked for the beneficiaries of the life insurance policies. If they report having life insurance policies, they are then asked if any of the policies are ones that build up a cash value that you can borrow against, or that you would receive if the policy were to be cancelled, which are sometimes called "whole life" or "straight life policies", and if so, the beneficiaries of the whole life insurance policies. In Waves 5 and 6, the respondent can select all that apply from the same selections as in Wave 4. In Wave 7, the respondent can select all that apply from a list that includes the respondent's spouse/partner, deceased child, all children, all grandchildren, siblings, other person (i.e. friend), other (including churches, charitable organizations, ex-spouses and other persons), or name any person that was assigned an OPN in the PRMC file. Starting in Wave 8, the respondent can select all that apply from the same selections as in Wave 7, without the choice of other person (i.e. friend). In Wave 5 and onward, the respondent is not asked specifically about term policies.

In Waves 3 to 5, the possible relationships in the PRMC file include: child, step/partner child, grandkid, professional, child-in-law, sibling, sibling of spouse, parent or parent-in-law, other relative, other. Starting in Wave 6, the possible relationships in the PRMC file include: spouse/partner, son, stepson, spouse/partner of daughter, daughter, stepdaughter, spouse/partner of son, grandchild, father, father of spouse/partner, mother, mother of spouse/partner, R's parents, brother, brother of spouse/partner, sister, sister of spouse/partner, other relative, other individual, organization, employee of 'institution', paid helper, professional, professional (specify), late spouse/partner, ex-spouse/partner, unlisted child or child-in-law, former step-child, former child-in-law, relationship unknown, spouse/partner of grandchild, unknown child, unknown-in-law. In Wave 8, spouse was no longer present, unknown child was replaced with ambiguous child relationship, unknown-in-law was replaced with ambiguous child-in-law relationship, and spouse/partner relationships were replaced as relationship "in-law" (i.e. spouse/partner of daughter was replaced with son-in-law). Starting in Wave 9, both spouse/partner relationships and relationships "in-law" were specified (i.e. spouse/partner of daughter (son-in-law)). Spouse was not an option in any wave after Wave 8 except for Wave 10 when it was an option.

**How Constructed:**

RwWLIFEIN indicates whether the respondent has any whole life insurance policies. RwWLIFEIN is coded as 0 if the respondent has no whole life insurance policies. RwWLIFEIN is coded as 1 if the respondent does have a whole life insurance policy. Whether the respondent has any whole life insurance policies is not asked in the HRS cohort in Wave 3 and in Wave 4, so RwWLIFEIN is assigned special missing .q in Wave 3 and is not available in Wave 4. Don't know, refused, or other missing responses are assigned special missing .d, .r, .m, respectively. RwWLIFEIN is set to plain missing (.) for respondents who did not participate in the current wave.

SwWLIFEIN indicates whether the respondent's spouse has any whole life insurance policies, and its values are taken from RwWLIFEIN. In addition to the special missing codes used in RwWLIFEIN, SwWLIFEIN employs two additional special missing codes, .u and .v. A special missing value .u is used when the respondent

does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwNWLFINs indicates the number of whole life insurance policies the respondent reports having. RwNWLFINs can take the values of 0 to 5, and if the respondent reports having more than 5 policies, then RwNWLFINs takes the value of 5. RwNWLFINs is assigned a value of 0 if the respondent reports having no whole life insurance policies. RwNWLFINs is available in Wave 1, the HRS and AHEAD cohorts in Wave 2, the AHEAD cohort in Wave 3 and in Waves 5 and onward. The number of whole life policies is not inquired about in the HRS cohort in Wave 3 and in Wave 4, so in Wave 3, RwNWLFINs is assigned special missing .q if the respondent was part of HRS Wave 3 and RwNWLFINs is not available in Wave 4. Don't know, refused, or other missing responses are assigned special missing .d, .r, .m, respectively. RwNWLFINs is set to plain missing (.) for respondents who did not participate in the current wave.

SwNWLFINs indicates the number of whole life insurance policies the respondent's spouse reports having, and its values are taken from RwNWLFINs. In addition to the special missing codes used in RwNWLFINs, SwNWLFINs employs two additional special missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

### Cross Wave Differences in HRS

In Wave 1, the HRS and AHEAD cohorts in Wave 2, and the AHEAD cohort in Wave 3, the respondent is first asked whether they have any life insurance policies. If they report having life insurance policies, they are then asked whether they have any life insurance policies that build up a cash value or that you can borrow on, which are sometimes called "whole life" or "straight life", and if so, the number of the whole life insurance policies. In Wave 1, the respondent can report up to 25 whole life policies. In the AHEAD cohort in Wave 2, the respondent can report up to 7 whole life policies. In the HRS cohort in Wave 2, the respondent can report up to 20 whole life policies. In the AHEAD cohort in Wave 3, the respondent can report a continuous number of 1 to 9, or 10 or more whole life policies.

In the HRS cohort in Wave 3 and in Wave 4, the respondent is first asked whether they have any life insurance policies. If they report having life insurance policies, they are then asked for the total number of different life insurance policies. In both waves, the respondent is not asked about term versus whole life policies.

Starting in Wave 5, the respondent is first asked whether they have any life insurance policies. If they report having life insurance policies, they are then asked if any of the policies are ones that build up a cash value that you can borrow against, or that you would receive if the policy were to be cancelled, which are sometimes called "whole life" or "straight life policies", and if so, the number of the whole life insurance policies. The respondent can report 1, 2, 3, 4, or 5 or more whole life policies.

### HRS Variables Used:

```
Wave 1:
  V6701      r16:r1have life insuranc
  V6711      r18:r1build*cash val*pol

## How Constructed:

RwWLFINSSP, RwWLFINSCH, RwWLFINSCG, RwWLFINSKG, RwWLFINSRL, RwWLFINSOR, and RwWLFINSOT indicate whether someone with the specified relationship is named a beneficiary of the respondent's whole life insurance policies. RwWLFINSOR is only available in Wave 1, and RwWLFINSCG is only available for the AHEAD cohorts in Waves 2 and 3. The respondent is able to select multiple relationships at each wave. RwWLFINSSP indicates whether the respondent's spouse/partner is named as a beneficiary of their whole life insurance. RwWLFINSCH indicates whether the respondent's child, all children, step/partner child, child-in-law, son, stepson, son-in-law, daughter, stepdaughter, daughter-in-law, unlisted child or child-in-law, unknown/ambiguous child, ambiguous child-in-law relationship, former step-child, former child-in-law, or deceased child are named as a beneficiary of their whole life insurance. RwWLFINSCG indicates whether the respondent's child/child-in-law/grandchild (which cannot be distinguished from each other) are named as a beneficiary of their whole life insurance. RwWLFINSKG indicates whether the respondent's grandchild, all grandchildren, or spouse/partner of grandchild are named as a beneficiary of their whole life insurance. RwWLFINSRL indicates whether other relatives, sibling, sibling of spouse, parent, parent-in-law, father, father-in-law, mother, mother-in-law, brother, brother-in-law, sister, sister-in-law, or unknown in-law are named as a beneficiary of their whole life insurance. RwWLFINSOR indicates whether a relative besides a child or someone else is named as a beneficiary of their whole life insurance. RwWLFINSOT indicates whether someone else, other non-relatives, other, professional, other individual, organization, employee of institution, paid helper, professional, specified professional, late spouse/partner, ex-spouse/partner, or person of unknown relationship are named as a beneficiary of their whole life insurance. RwWLFINSSP, RwWLFINSCH, RwWLFINSCG, RwWLFINSKG, RwWLFINSRL, RwWLFINSOR, and RwWLFINSOT are coded as 0 if the appropriate relationship is not mentioned as a beneficiary of their whole life insurance, and coded as 1 if the appropriate relationship is mentioned as being a beneficiary of their whole life insurance.

In Wave 1, the respondent can select from spouse, children, and others, as such, RwWLFINSSP, RwWLFINSCH, and RwWLFINSOR are used this wave and RwWLFINSKG, RwWLFINSRL, RwWLFINSCG, and RwWLFINSOT are not available in this wave. In this wave, RwWLFINSOR can be any relative besides a child or someone unrelated to the respondent.

In the AHEAD cohort in Wave 2, the respondent can select from spouse/partner, child/child-in-law/grandchild, other relative, and someone else, as such, RwWLFINSSP, RwWLFINSCG, RwWLFINSRL, and RwWLFINSOT are used this wave and RwWLFINSCH and RwWLFINSKG are not available in this wave. In this wave, RwWLFINSOT includes other non-relatives. Because the HRS cohort in Wave 2 does not ask about beneficiaries, these respondents in Wave 2 are assigned special missing .q for RwWLFINSSP, RwWLFINSCG, RwWLFINSRL, and RwWLFINSOT.

In the AHEAD cohort in Wave 3, the respondent can select from spouse/partner, child/child-in-law/grandchild, other relative, someone else, and other, as such RwWLFINSSP, RwWLFINSCG, RwWLFINSRL, and RwWLFINSOT are used this wave and RwWLFINSCH, RwWLFINSKG, and RwWLFINSOR are not available in this wave. In the HRS cohort in Wave 3 and in Wave 4, the respondent is not asked about whole life insurance policies or the beneficiaries, as such in Wave 3, RwWLFINSSP, RwWLFINSCG, RwWLFINSRL, and RwWLFINSOT are assigned special missing .q if the respondent was in the HRS cohort in Wave 3. None of these variables are available in Wave 4. In Wave 3, RwWLFINSOT only includes other non-relatives.

Starting in Wave 5, the respondent can select from a list or choose any person with an OPN from the PRMC file. In these waves, RwWLFINSSP, RwWLFINSCH, RwWLFINSKG, RwWLFINSRL, and RwWLFINSOT are available, and RwWLFINSCG and RwWLFINSOR are no longer available. In these waves, RwWLFINSOT only includes other non-relatives.

In Wave 5 (CAPI versions 2-4) there was an error which only asked respondents who the beneficiaries of their whole life insurance policy were if they had given a missing value to a question of how much in total they paid in premiums for all whole life insurance policies. In these cases RwWLFINSSP, RwWLFINSCH, RwWLFINSKG, RwWLFINSRL, and RwWLFINSOT are assigned special missing .e.

In all waves, RwWLFINSSP, RwWLFINSCH, RwWLFINSKG, RwWLFINSRL, RwWLFINSOR, RwWLFINSOT, and RwWLFINSCG are assigned special missing .n if the respondent has no whole life insurance policies. Don't know, refused,

or other missing responses are assigned special missing .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not participate in the current wave.

SwWLFINSSP, SwWLFINSCH, SwWLFINSCG, SwWLFINSRGK, SwWLFINSRL, SwWLFINSOR, and SwWLFINSOT indicate whether someone with the specified relationship is named a beneficiary of the respondent's spouse's whole life insurance policies, and their values are taken from RwWLFINSSP, RwWLFINSCH, RwWLFINSCG, RwWLFINSRGK, RwWLFINSRL, RwWLFINSOR, and RwWLFINSOT. In addition to the special missing codes used in the respondent variables, the spouse variables employ two additional special missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

In HRS Wave 1 and the AHEAD cohorts in Waves 2 and 3, the respondent is first asked whether they have any life insurance policies. If they report having life insurance policies, they are then asked whether they have any life insurance policies that build up a cash value or that you can borrow on, which are sometimes called "whole life" or "straight life", and if so, the beneficiaries of the whole life insurance policies. In HRS Wave 1, the respondent can select all that apply from a drop-down list that includes the respondent's spouse, children, and others for whole life policies. In the AHEAD cohort in Wave 2, the respondent can select all that apply from a drop-down list that includes the respondent's spouse/partner, child/child-in-law/grandchild, other relative, and someone else for whole life policies. In the AHEAD cohort in Wave 3, the respondent can select all that apply from a drop-down list that includes the respondent's spouse/partner, child/child-in-law/grandchild, other relative, someone else, and other for whole life policies.

In the HRS cohort in Wave 2, the respondent is first asked whether they have any life insurance policies, and separately about having term insurance policies and whole life insurance policies. However, the respondent is not asked who the beneficiary of these policies would be.

In the HRS cohort in Wave 3 and in Wave 4, the respondent is first asked whether they have any life insurance policies. If they report having life insurance policies, they are then asked for the beneficiaries of the life insurance policies. In both waves, the respondent is not asked about term versus whole life policies.

Starting in Wave 5, the respondent is first asked whether they have any life insurance policies. If they report having life insurance policies, they are then asked if any of the policies are ones that build up a cash value that you can borrow against, or that you would receive if the policy were to be cancelled, which are sometimes called "whole life" or "straight life policies", and if so, the beneficiaries of the whole life insurance policies. In Waves 5 and 6, the respondent can select all that apply from a drop-down list that includes the respondent's spouse/partner, all children, other (including churches, charitable organizations, ex-spouses and other persons), or name any person that was assigned an OPN in the PRMC file. In Wave 7, the respondent can select all that apply from a drop-down list that includes the respondent's spouse/partner, deceased child, all children, all grandchildren, siblings, other person (i.e. friend), other (including churches, charitable organizations, ex-spouses and other persons), or name any person that was assigned an OPN in the PRMC file. Starting in Wave 8, the respondent can select all that apply from the same selections as in Wave 7, without the choice of other person (i.e. friend). In Wave 5 and onward, the respondent is not asked specifically about term policies.

In Wave 5 (CAPI versions 2-4) there was an error which only asked respondents who the beneficiaries of their whole life insurance policy were if they had given a missing value to a question of how much in total they paid in premiums for all whole life insurance policies.

In Wave 5, the possible relationships in the PRMC file include: child, step/partner child, grandkid, professional, child-in-law, sibling, sibling of spouse, parent or parent-in-law, other relative, other. Starting in Wave 6, the possible relationships in the PRMC file include: spouse/partner, son, stepson, spouse/partner of daughter, daughter, stepdaughter, spouse/partner of son, grandchild, father, father of spouse/partner, mother, mother of spouse/partner, R's parents, brother, brother of spouse/partner, sister, sister of spouse/partner, other relative, other individual, organization, employee of 'institution', paid helper, professional, professional (specify), late spouse/partner, ex-spouse/partner, unlisted child or child-in-law, former step-child, former child-in-law, relationship unknown, spouse/partner of grandchild, unknown child, unknown-in-law. In Wave 8, spouse was no longer present, unknown child was replaced with ambiguous child relationship, unknown-in-law was replaced with ambiguous

child-in-law relationship, and spouse/partner relationships were replaced as relationship "in-law" (i.e. spouse/partner of daughter was replaced with son-in-law). Starting in Wave 9, both spouse/partner relationships and relationships "in-law" were specified (i.e. spouse/partner of daughter (son-in-law)). Spouse was not an option in any wave after Wave 8 except for Wave 10 when it was an option.

### How Constructed:

RwLIFEINN indicates whether the respondent obtained new life insurance since the previous wave or in the last 2 years. RwLIFEINN is coded as 0 if the respondent did not obtain new life insurance since the previous wave or had no life insurance in the current wave. RwLIFEINN is coded as 1 if the respondent did obtain new life insurance since the previous wave. This question is asked starting in the HRS cohort in Wave 3. In Wave 3, if the respondent was part of the AHEAD cohort, then RwLIFEINN is assigned special missing .q. This question is not asked in Wave 4 if the respondent had not been previously interviewed, in which case RwLIFEINN is assigned special missing .i. Don't know, refused, or other missing responses are assigned special missing .d, .r, .m, respectively. RwLIFEINN is set to plain missing (.) for respondents who did not participate in the current wave.

SwLIFEINN indicates whether the respondent's spouse obtained new life insurance since the previous wave or in the last 2 years, and its values are taken from RwLIFEINN. In addition to the special missing codes used in RwLIFEINN, SwLIFEINN employs two additional special missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwLIFEINL indicates whether the respondent had any life insurance lapse since the previous wave or in the last 2 years. RwLIFEINL is coded as 0 if the respondent did not have any life insurance lapse since the previous wave. RwLIFEINL is coded as 1 if the respondent did have some life insurance lapse since the previous wave. This question is asked starting in the HRS cohort in Wave 3. In Wave 3, if the respondent was part of the AHEAD cohort, then RwLIFEINL is assigned special missing .q. This question is not asked in the HRS cohort in Wave 3 and in Wave 4 if the respondent had no life insurance in the current wave, in which case RwLIFEINL is assigned special missing .l. This question is not asked in Wave 4 if the respondent had not been previously interviewed, in which case RwLIFEINL is assigned special missing .i. Don't know, refused, or other missing responses are assigned special missing .d, .r, .m, respectively. RwLIFEINL is set to plain missing (.) for respondents who did not participate in the current wave.

SwLIFEINL indicates whether the respondent's spouse had any life insurance lapse since the previous wave or in the last 2 years, and its values are taken from RwLIFEINL. In addition to the special missing codes used in RwLIFEINL, SwLIFEINL employs two additional special missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

No questions about new or lapsed life insurance are asked prior to the HRS cohort in Wave 3.

Respondents in the HRS cohort in Wave 3 and onward are asked if they obtained any new life insurance policies since the previous wave if they reported having life insurance in the current wave. Only in Wave 4, new respondents who had not been previously interviewed are not asked this question.

Respondents in the HRS cohort in Wave 3 and onward are asked if they allowed any life insurance policies to lapse or if any have been cancelled since the previous wave. Only in the HRS cohort in Wave 3 and in Wave 4, respondents are not asked this question if they reported having no life insurance in the current wave. Only in HRS Wave 4, new respondents who had not been previously interviewed are not asked this question.

## HRS Variables Used:

Wave 3 AHEAD:  
 DN\_INHH dn\_inhh: # r's responding in hhold

Wave 3 HRS:  
 E5284 r94.have any life insurance  
 E5294 r100. obtained more life ins  
 E5301 r101. let policy lapse

Wave 4:  
 F463 preload reinterview hh  
 F6015 r94.have any life insurance  
 F6027 r100.obtained more  
 F6033 r101.obtained more

Wave 5:  
 G6409 r94.have any life insurance  
 G6441 r100.obtained more lf ins  
 G6447 r101.let lf ins lapse

Wave 6:  
 HT011 r have any life insurance  
 HT031 last wave obtain new life insurance  
 HT036 r life ins policy lapse since last wave

Wave 7:  
 JT011 r have any life insurance  
 JT031 last wave obtain new life insurance  
 JT036 r life ins policy lapse since last wave

Wave 8:  
 KT011 r have any life insurance  
 KT031 last wave obtain new life insurance  
 KT036 r life ins policy lapse since last wave

Wave 9:  
 LT011 r have any life insurance  
 LT031 last wave obtain new life insurance  
 LT036 r life ins policy lapse since last wave

Wave 10:  
 MT011 r have any life insurance  
 MT031 last wave obtain new life insurance  
 MT036 r life ins policy lapse since last wave

Wave 11:  
 NT011 r have any life insurance  
 NT031 last wave obtain new life insurance  
 NT036 r life ins policy lapse since last wave

Wave 12:  
 OT011 r have any life insurance  
 OT031 last wave obtain new life insurance  
 OT036 r life ins policy lapse since last wave

Wave 13:  
 PT011 r have any life insurance  
 PT031 last wave obtain new life insurance

PT036            r life ins policy lapse since last wave  
Wave 14:  
  QT011        r have any life insurance  
  QT031        last wave obtain new life insurance  
  QT036        r life ins policy lapse since last wave  
Wave 15:  
  RT011        r have any life insurance  
  RT031        last wave obtain new life insurance  
  RT036        r life ins policy lapse since last wave

## How Constructed:

The following variables in this section reference a series of questions that screen for major depressive episodes. The test consists of two sets of questions, one for measuring dysphoria (depressed mood) and another for anhedonia (the loss of interest in things that usually give them pleasure).

Respondents are first asked a set of screening questions for dysphoria: first, whether there was a time they felt sad, blue, or depressed for two weeks or more in a row in the past 12 months, and if so, whether these feelings lasted all day long, most of the day, about half the day, or less than half the day during the two-week period when these feelings were worst, and if most of the day or all day, then whether they felt this way every day, almost every day, or less often during those two weeks. If they answered that they didn't feel depressed for two weeks or more in a row, these feelings lasted about half the day or less than half the day, or if they felt this way less than almost every day, then they are not asked the questions on dysphoria and are asked to answer the next screening questions for anhedonia. Respondents who pass the screening for dysphoria are asked whether they have experienced the following 7 symptoms during those two weeks when they felt worst: lost interest in most things; felt more tired out or low in energy than is usual; change in appetite (either lost appetite or increased appetite, asked separately); had more trouble falling asleep than usual, and reported this happening every night or nearly every night; had a lot more trouble concentrating than usual; felt down on themselves, and no good or worthless; and thought a lot about death, either their own, someone else's, or death in general.

RwCIDIDEP sums the score of the 7 questions that ask about having symptoms of dysphoria if they passed the screening questions for dysphoria, and ranges from 0 to 7. Each positive response adds one to the total, and RwCIDIDEP is calculated as long as at least one of the measures is not missing. RwCIDIDEP counts the number of components with missing responses. RwCIDIDEP and RwCIDIDEPM are assigned special missing .n if the dysphoria questions were not asked because the respondent did not pass the dysphoria screening. RwCIDIDEP and RwCIDIDEPM are assigned special missing .p if these questions were skipped because the interview was by proxy. If the respondent voluntarily reports not feeling depressed because they are on antidepressants, then RwCIDIDEP and RwCIDIDEPM are assigned special missing .a. Don't know, refused, or other missing responses to the components of RwCIDIDEP are assigned special missing codes .d, .r, or .m, respectively. In Waves 4 through 8, these questions are not asked to respondents who were interviewed in the previous wave, and so RwCIDIDEP and RwCIDIDEPM are assigned special missing .s in these waves. RwCIDIDEP and RwCIDIDEPM are set to plain missing (.) for respondents who did not respond to the current wave.

Respondents who did not pass the dysphoria screening questions are then asked the anhedonia screening questions: first, whether there was a time they lost interest in most things like hobbies, work, or activities that usually give them pleasure for two weeks or more in the past 12 months, and if so, whether these feelings lasted all day long, most of the day, about half the day, or less than half the day during the two-week period when they had the most complete loss of interest in things, and if most of the day or all day, then whether they felt this way every day, almost every day, or less often during those two weeks. If they answered that they didn't lose interest for two weeks or more, these feelings lasted about half the day or less than half the day, or if they felt this way less than almost every day, then they are not asked the questions on anhedonia and no more questions in this series are asked. Respondents who pass the screening for anhedonia are asked whether they have experienced the following 6 symptoms during the two weeks when they had the most complete loss of interest in things: felt tired out or low on energy all the time; change in appetite (either lost appetite or increased appetite, asked separately); had more trouble falling asleep than usual, and reported this happening every night or nearly every night; had more trouble concentrating than usual; felt down on themselves, no good or worthless; and thought a lot about death, either their own, someone else's, or death in general.

RwCIDIANH sums the score of the 7 questions that ask about having symptoms of anhedonia if they passed the screening questions for anhedonia, and ranges from 0 to 7. The screening questions count as the first positive response if the respondent reported losing interest in most things and that these feelings lasted all day or most of the day, and felt like this every day or almost every day. Each positive response from the 6 following questions adds one to the total, and RwCIDIANH is calculated as long as at least one of the measures is not missing. RwCIDIANH counts the number of components with missing responses. RwCIDIANH and RwCIDIANHM are assigned special missing .n if the anhedonia questions were not asked because the respondent already completed the dysphoria screening or did not pass the anhedonia screening. RwCIDIANH and RwCIDIANHM are assigned special missing .p if these questions were skipped because the interview was by proxy. If the respondent voluntarily reports not feeling depressed because they are on antidepressants, then RwCIDIANH and RwCIDIANHM are assigned special missing .a. Don't know, refused, or other missing responses to the components of RwCIDIANH are assigned special missing codes .d,

.r, or .m, respectively. In Waves 4 through 8, these questions are not asked to respondents who were interviewed in the previous wave, and so RwcIDIANH and RwcIDIANHM are assigned special missing .s in these waves. RwcIDIANH and RwcIDIANHM are set to plain missing (.) for respondents who did not respond to the current wave.

RwCIDISYMP indicates the total number of symptoms the respondent reported experiencing. RwCIDISYMP will take the value of RwcIDIDEP if the respondent answered the dysphoria questions, and will take the value of RwcIDIANH if the respondent answered the anhedonia questions. If the respondent did not pass the screening for dysphoria or anhedonia, then RwCIDISYMP is assigned a value of 0 since it is assumed that they are exhibiting no symptoms of depression. RwCIDISYMPM counts the number of components with missing responses. RwCIDISYMP and RwCIDISYMPM are assigned special missing .p if these questions were skipped because the interview was by proxy. If the respondent voluntarily reports not feeling depressed because they are on antidepressants, then RwCIDISYMP and RwCIDISYMPM are assigned special missing .a. Don't know, refused, or other missing responses to the components of RwCIDISYMP are assigned special missing codes .d, .r, or .m, respectively. In Waves 4 through 8, these questions are not asked to respondents who were interviewed in the previous wave, and so RwCIDISYMP and RwCIDISYMPM are assigned special missing .s in these waves. RwCIDISYMP and RwCIDISYMPM are set to plain missing (.) for respondents who did not respond to the current wave.

RwCIDIMDE3 and RwCIDIMDE5 indicate whether the respondent has had a probable major depressive episode. RwCIDIMDE3 uses a threshold of 3 or more symptoms, while RwCIDIMDE5 uses a threshold of 5 or more symptoms to indicate a probable major depressive episode. RwCIDIMDE3 is assigned a value of 0 if the respondent exhibited 0 to 2 symptoms, and assigned a value of 1 if the respondent exhibited 3 to 7 symptoms. RwCIDIMDE5 is assigned a value of 0 if the respondent exhibited 0 to 4 symptoms, and assigned a value of 1 if the respondent exhibited 5 to 7 symptoms. RwCIDIMDE3 and RwCIDIMDE5 are assigned special missing .p if these questions were skipped because the interview was by proxy. If the respondent voluntarily reports not feeling depressed because they are on antidepressants, then RwCIDIMDE3 and RwCIDIMDE5 are assigned special missing .a. Don't know, refused, or other missing responses to the components of RwCIDIMDE3 and RwCIDIMDE5 are assigned special missing codes .d, .r, or .m, respectively. In Waves 4 through 8, these questions are not asked to respondents who were interviewed in the previous wave, and so RwCIDIMDE3 and RwCIDIMDE5 are assigned special missing .s in these waves. RwCIDIMDE3 and RwCIDIMDE5 are set to plain missing (.) for respondents who did not respond to the current wave.

SwCIDIDEP, SwCIDIDEPM, SwCIDIANH, SwCIDIANHM, SwCIDISYMP, SwCIDISYMPM, SwCIDIMDE3, and SwCIDIMDE5 indicate the respondent's current wave's spouse's experience with a major depressive episode, and their values are taken from RwcIDIDEP, RwcIDIDEPM, RwcIDIANH, RwcIDIANHM, RwcIDISYMP, RwcIDISYMPM, RwcIDIMDE3, and RwcIDIMDE5. In addition to the special missing codes employed by the respondent variables, the spouse variables employ two additional special missing codes: .u and .v. The special missing value .u is used when the respondent does not report being coupled in the current wave. The special missing code .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

These questions are asked starting in the AHEAD and HRS samples in Wave 3.

In Wave 3, these questions are asked to all non-proxy respondents. In Waves 4 through 8, these questions are only asked to non-proxy respondents who did not participate in the previous interview. Starting in Wave 9, these questions are once again asked to all non-proxy respondents.

### How Constructed:

RwLIDEAL indicates how much the respondent agrees that in most ways their life is close to ideal using a 7-point scale.

RwLEXCL indicates how much the respondent agrees that the conditions of their life are excellent using a 7-point scale.

RwLSTSF indicates how much the respondent agrees that they are satisfied with their life using a 7-point scale.

RwLIMP3TT indicates how much the respondent agrees that they have gotten the important things they want in life using a 7-point scale.

RwLCHNOT indicates how much the respondent agrees that if they could live again, they would change almost nothing using a 7-point scale.

A code of 1 is assigned if the respondent strongly disagreed with the statement. A code of 2 is assigned if the respondent disagreed with the statement. A code of 3 is assigned if the respondent slightly disagreed with the statement. A code of 4 is assigned if the respondent neither agreed nor disagreed with the statement. A code of 5 is assigned if the respondent slightly agreed with the statement. A code of 6 is assigned if the respondent agreed with the statement. A code of 7 is assigned if the respondent strongly agreed with the statement. These questions are asked in the psychosocial leave-behind survey which was provided to a sub-sample of respondents at Wave 7 and to each half-sample of respondents every

two waves starting at Wave 8, respectively. Respondents who were not part of the leave-behind sample or did not return their survey are assigned special missing code .c. These variables are assigned special missing .s in Wave 7 if the respondent was not asked to complete the psychosocial self-completion questionnaire in that wave. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to blank missing (.) if the respondent did not participate in the current wave.

SwLIDEAL, SwLEXCL, SwLSTSF, SwLIMPTT, and SwLCHNOT indicate the current wave's spouse's level of agreement with the statements about their life satisfaction and are taken from the spouse's values to RwlIDEAL, RwlEXCL, RwlSTSF, RwlIMPTT, and RwlCHNOT. In addition to the special missing codes used in RwlIDEAL, RwlEXCL, RwlSTSF, RwlIMPTT, and RwlCHNOT, SwLIDEAL, SwLEXCL, SwLSTSF, SwLIMPTT, and SwLCHNOT employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwLSATSC indicates the mean of the five different life satisfaction questions (RwlIDEAL, RwlEXCL, RwlSTSF, RwlIMPTT, and RwlCHNOT) and can be used as a summary score. RwLSATSC is calculated for any respondent with at least two non-missing values for its five components. RwLSATSCM counts the number of components with missing values in RwLSATSC, with could be between no missing components (0) and five missing components (5). These questions are asked in the psychosocial leave-behind survey which was provided to a sub-sample of respondents at Wave 7 and to each half-sample of respondents every two waves starting at Wave 8, respectively. Respondents who were not part of the leave-behind sample or did not return their survey are assigned special missing code .c. These variables are assigned special missing .s in Wave 7 if the respondent was not asked to complete the psychosocial self-completion questionnaire in that wave. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to blank missing (.) if the respondent did not participate in the current wave.

SwLSATSC and SwLSATSCM indicate the mean summary score of five different life satisfaction questions and the count of any missing components in that score for the current wave's spouse and are taken from the spouse's values to RwLSATSC and RwLSATSCM. In addition to the special missing codes used in RwLSATSC and RwLSATSCM, SwLSATSC and SwLSATSCM employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwlIDEAL3 indicates how much the respondent agrees that in most ways their life is close to ideal using a 3-point scale.

RwlEXCL3 indicates how much the respondent agrees that the conditions of their life are excellent using a 3-point scale.

RwlSTSF3 indicates how much the respondent agrees that they are satisfied with their life using a 3-point scale.

RwlIMPTT3 indicates how much the respondent agrees that they have gotten the important things they want in life using a 3-point scale.

RwlCHNOT3 indicates how much the respondent agrees that if they could live again, they would change almost nothing using a 3-point scale.

A code of 1 is assigned if the respondent strongly disagreed, disagreed, or slightly disagreed with the statement. A code of 2 is assigned if the respondent neither agreed nor disagreed with the statement. A code of 3 is assigned if the respondent slightly agreed, agreed, or strongly agreed with the statement. These questions are asked in the psychosocial leave-behind survey which was provided to a sub-sample of respondents at Wave 7 and to each half-sample of respondents every two waves starting at Wave 8, respectively. Respondents who were not part of the leave-behind sample or did not return their survey are assigned special missing code .c. These variables are assigned special missing .s in Wave 7 if the respondent was not asked to complete the psychosocial self-completion questionnaire in that wave. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to blank missing (.) if the respondent did not participate in the current wave.

SwLIDEAL3, SwLEXCL3, SwLSTSF3, SwLIMPTT3, and SwLCHNOT3 indicate the current wave's spouse's level of agreement with the statements about their life satisfaction and are taken from the spouse's values to RwlIDEAL3, RwlEXCL3, RwlSTSF3, RwlIMPTT3, and RwlCHNOT3. In addition to the special missing codes used in RwlIDEAL3, RwlEXCL3, RwlSTSF3, RwlIMPTT3, and RwlCHNOT3, SwLIDEAL3, SwLEXCL3, SwLSTSF3, SwLIMPTT3, and SwLCHNOT3 employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwLSATSC3 indicates the mean of the five different life satisfaction questions (RwlIDEAL3, RwlEXCL3, RwlSTSF3, RwlIMPTT3, and RwlCHNOT3) and can be used as a summary score. RwLSATSC3 is calculated for any respondent with at least two non-missing values for its five components. RwLSATSC3M counts the number of components with missing values in RwLSATSC3, with could be between no missing components (0) and five missing components (5). These questions are asked in the psychosocial leave-behind survey which was provided to a sub-sample of respondents at Wave 7 and to each half-sample of respondents every two waves starting at Wave 8, respectively. Respondents who were not part of the leave-behind sample or did not did not return their survey are assigned special missing code .c. These variables are assigned special missing .s in Wave 7 if the respondent was not asked to complete the psychosocial self-completion questionnaire in that wave. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to blank missing (.) if the respondent did not participate in the current wave.

SwLSATSC3 and SwLSATSC3M indicate the mean summary score of five different life satisfaction questions and the count of any missing components in that score for the current wave's spouse and are taken from the spouse's values to RwLSATSC3 and RwLSATSC3M. In addition to the special missing codes used in RwLSATSC3 and RwLSATSC3M, SwLSATSC3 and SwLSATSC3M employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

The questions about the respondent's agreements with statements about their life satisfaction were added to HRS starting in Wave 7.

In Wave 7, those eligible for a self-completion questionnaire were split between receiving a psychosocial questionnaire and a disability questionnaire. As such, these variables use a special missing .s in Wave 7 if the respondent was asked to complete the disability questionnaire and not the psychosocial questionnaire.

The scale directionality changes across waves. In Wave 7, the response scale ranges from 1.Strongly agree to 7.Strongly disagree. In Wave 8, the response scale omits the option for "neither agree nor disagree" and ranges from 1.Strongly agree to 6.Strongly disagree. Starting in Wave 9, the response scale ranges from 1.Strongly disagree to 7.Strongly agree. The responses in Waves 7 and 8 are reverse-coded to be consistent with the direction of the answer scale used in Wave 9 and onward.

## HRS Variables Used:

### Wave 7:

JLB505A	q5a. life is close to ideal
JLB505B	q5b. conditions of life are excellent
JLB505C	q5c. satisfied with life
JLB505D	q5d. have important things in life
JLB505E	q5e. change nothing if lived life over

### Wave 8:

KLB003A	q03a. life is close to ideal
KLB003B	q03b. conditions of life are excellent
KLB003C	q03c. satisfied with life
KLB003D	q03d. have important things in life
KLB003E	q03e. change nothing if lived life over

### Wave 9:

LLB003A	q03a. life is close to ideal
LLB003B	q03b. conditions of life are excellent

LLB003C q03c. satisfied with life  
LLB003D q03d. have important things in life  
LLB003E q03e. change nothing if lived life over

Wave 10:  
MLB003A q03a. life is close to ideal  
MLB003B q03b. conditions of life are excellent  
MLB003C q03c. satisfied with life  
MLB003D q03d. have important things in life  
MLB003E q03e. change nothing if lived life over

Wave 11:  
NLB003A q03a. life is close to ideal  
NLB003B q03b. conditions of life are excellent  
NLB003C q03c. satisfied with life  
NLB003D q03d. have important things in life  
NLB003E q03e. change nothing if lived life over

Wave 12:  
OLB002A q02a. life is close to ideal  
OLB002B q02b. conditions of life are excellent  
OLB002C q02c. satisfied with life  
OLB002D q02d. have important things in life  
OLB002E q02e. change nothing if lived life over

Wave 13:  
PLB002A q02a. life is close to ideal  
PLB002B q02b. conditions of life are excellent  
PLB002C q02c. satisfied with life  
PLB002D q02d. have important things in life  
PLB002E q02e. change nothing if lived life over

Wave 14:  
QLB002A q02a. life is close to ideal  
QLB002B q02b. life conditions are excellent  
QLB002C q02c. satisfied with life  
QLB002D q02d. have important things in life  
QLB002E q02e. change none if lived life over

Wave 15:  
RLB002A q02a. life is close to ideal  
RLB002B q02b. life conditions are excellent  
RLB002C q02c. satisfied with life  
RLB002D q02d. have important things in life  
RLB002E q02e. change none if lived life over

## How Constructed:

RwSATHOME indicates the respondent's rating of their satisfaction with the condition of their house/apartment. RwsATAREA indicates the respondent's rating of their satisfaction with the city/town they live in. RwsATLSR indicates the respondent's rating of their satisfaction with their daily life/leisure activities. RwsATFAM indicates the respondent's rating of their satisfaction with their family life. RwsATFNNCL indicates the respondent's rating of their satisfaction with their current financial situation. RwsATHLTH indicates the respondent's rating of their satisfaction with their health. RwsATWLIFE indicates the respondent's rating of their satisfaction with their life as a whole. All of these variables use a 5-point scale ranging from completely satisfied to not at all satisfied and are coded as follows: 1.Completely satisfied, 2.Very satisfied, 3.Somewhat satisfied, 4.Not very satisfied, 5.Not at all satisfied. These questions are asked in the psychosocial leave-behind survey which was provided to a sub-sample of respondents at Wave 7 and to each half-sample of respondents every two waves starting at Wave 8, respectively. Respondents who were not part of the leave-behind sample or did not return their survey are assigned special missing code .c. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. All variables are set to plain missing (.) for respondents who did not respond to the current wave.

SwsATHOME indicates the respondent's spouse's rating of their satisfaction with the condition of their house/apartment, and its value is taken directly from the corresponding respondent variable. SwsATAREA indicates the respondent's spouse's rating of their satisfaction with the city/town they live in, and its value is taken directly from the corresponding respondent variable. SwsATLSR indicates the respondent's spouse's rating of their satisfaction with their daily life/leisure activities, and its value is taken directly from the corresponding respondent variable. SwsATFAM indicates the respondent's spouse's rating of their satisfaction with their family life, and its value is taken directly from the corresponding respondent variable. SwsATFNNCL indicates the respondent's spouse's rating of their satisfaction with their current financial situation, and its value is taken directly from the corresponding respondent variable. SwsATHLTH indicates the respondent's spouse's rating of their satisfaction with their health, and its value is taken directly from the corresponding respondent variable. SwsATWLIFE is the respondent's spouse's rating of their satisfaction with their life as a whole, and its value is taken directly from the corresponding respondent variable. In addition to the special missing codes used in the respondent variables, the spouse variables employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Questions related to domain-specific satisfaction were added to HRS leave-behind survey starting in Wave 9.

The question asking about satisfaction with their life as a whole is only asked in Waves 9 through 11.

## HRS Variables Used:

Wave 9:	
LLB039A	q39a. condition of home
LLB039B	q39b. city town live
LLB039C	q39c. daily leisure acts

LLB039D	q39d. family life
LLB039E	q39e. present fin situation
LLB039F	q39f. health
LLB039G	q39g. life as a whole
Wave 10:	
MLB039A	q39a. condition of home
MLB039B	q39b. city town live
MLB039C	q39c. daily leisure acts
MLB039D	q39d. family life
MLB039E	q39e. present fin situation
MLB039G	q39g. health
MLB039H	q39g_2. life as a whole
Wave 11:	
NLB039A	q39a. condition of home
NLB039B	q39b. city town live
NLB039C	q39c. daily leisure acts
NLB039D	q39d. family life
NLB039E	q39e. present fin situation
NLB039G	q39g. health
NLB039H	q39g_2. life as a whole
Wave 12:	
OLB034A	q34a. condition of home
OLB034B	q34b. city town live
OLB034C	q34c. daily leisure acts
OLB034D	q34d. family life
OLB034E	q34e. present fin situation
OLB034G	q34g. health
Wave 13:	
PLB034A	q34a. condition of home
PLB034B	q34b. city town live
PLB034C	q34c. daily leisure acts
PLB034D	q34d. family life
PLB034E	q34e. present fin situation
PLB034G	q34g. health
Wave 14:	
QLB034A	q34a. condition of home
QLB034B	q34b. city town live
QLB034C	q34c. daily leisure acts
QLB034D	q34d. family life
QLB034E	q34e. present fin situation
QLB034G	q34g. health
Wave 15:	
RLB034_1	q34a. condition of home
RLB034_2	q34b. city town live
RLB034_3	q34c. daily leisure acts
RLB034_4	q34d. family life
RLB034_5	q34e. present fin situation
RLB034_7	q34g. health

## How Constructed:

RwSATLIFE\_H and RwsATLIFEZ indicate the respondent's level of life satisfaction. Life satisfaction is asked using the following response scale: 1.Completely Satisfied, 2.Very Satisfied, 3.Somewhat Satisfied, 4.Not Very Satisfied, and 5.Not At All Satisfied. To make RwsATLIFE\_H comparable across Harmonized datasets, responses to this question have been reverse-coded, so that RwsATLIFE\_H is coded as follows: 1.Not At All Satisfied, 2.Not Very Satisfied, 3.Somewhat Satisfied, 4.Very Satisfied, and 5.Completely Satisfied. RwsATLIFEZ is a z-scored version of the respondent's level of life satisfaction, and is calculated by z-scoring RwsATLIFE\_H. This question is not asked if the interview is by proxy, in which case these variables are assigned special missing value .p. Don't know, refused, and other missing values

are assigned special missing .d, .r, and .m, respectively. These variables are set to blank missing (.) if the respondent did not participate in the current wave.

SwSATLIFE\_H and SwSATLIFEZ indicate the current wave's spouse's level of life satisfaction, and their values are taken from the corresponding respondent variables. In addition to the special missing codes employed by the respondent variables, SwSATLIFE\_H and SwSATLIFEZ employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

A question about satisfaction with life was added to HRS starting in Wave 9. This question was not asked if the interview was completed by a proxy on behalf of the respondent.

### HRS Variables Used:

### How Constructed:

RwCANTRIL is the respondent's rating of their position on a ladder representing their social status. The respondent is given the following prompt, "Think of this ladder as representing where people stand in our

society. At the top of the ladder are the people who are the best off - those who have the most money, most education, and best jobs. At the bottom are the people who are the worst off - who have the least money, least education, and the worst jobs or no jobs. The higher up you are on this ladder, the closer you are to the people at the very top and the lower you are, the closer you are to the people at the very bottom. Please mark an X on the rung on the ladder where you would place yourself." The given score ranges from 1 to 10, so that a 1 indicates the lowest rung on the ladder and a 10 indicates the highest rung on the ladder. This question is asked in the psychosocial leave-behind survey which was provided to a sub-sample of respondents at Wave 7 and to each half-sample of respondents every two waves starting at Wave 8, respectively. Respondents who were not part of the leave-behind sample or did not return their survey are assigned special missing code .c. In Wave 7, not everyone who completed the self-completion questionnaire received a psychosocial survey, and in these cases RwcANTRIL is assigned special missing value .s. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. RwcANTRIL is set to plain missing (.) for respondents who did not respond to the current wave.

RwcANTRILC is the respondent's rating of whether their position on the ladder has changed within the last two years. For this question, the respondent was given the following category options: 1.Yes, I have moved up, 3.Yes, I have moved down, and 5.No, my position has not changed. To provide a comparable variable between studies, RwcANTRILC is coded using the following 3-category options: 1.Yes, I have moved up, 2.No, my position has not changed, 3.Yes, I have moved down. This question is asked in the psychosocial leave-behind survey which was provided to a sub-sample of respondents at Wave 7 and to each half-sample of respondents every two waves starting at Wave 8, respectively. Respondents who were not part of the leave-behind sample or did not return their survey are assigned special missing code .c. In Wave 7, not everyone who completed the self-completion questionnaire received a psychosocial survey, and thus RwcANTRILC is assigned special missing value .s. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. RwcANTRILC is set to plain missing (.) for respondents who did not respond to the current wave.

SwcANTRIL and SwcANTRILC are the respondent's spouse's rating of their place in society and whether their position has changed within the past two years, respectively. Their values are taken directly from the corresponding respondent variables. In addition to the special missing codes used in the respondent variables, the spouse variables employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Questions related to position on job ladder/subjective social status were added to the HRS leave-behind survey starting in Wave 7.

In Wave 7, those eligible for a self-completion questionnaire were split between receiving a psychosocial questionnaire and a disability questionnaire. As such, these variables use a special missing .s in Wave 7 if the respondent was asked to complete the disability questionnaire and not the psychosocial questionnaire.

## HRS Variables Used:

## How Constructed:

The following variables indicate to what degree the respondent felt a particular feeling in the past 30 days. Each of these variables are assigned the following 5-point values: 1.Not at all, 2.A little, 3.Moderately, 4.Quite a bit, 5.Very much. Note that this scale is reversed from the how the scale was asked in the HRS to ensure that higher values represent more positive feelings. These questions are asked in the psychosocial leave-behind survey which was provided to a sub-sample of respondents at Wave 7 and to each half-sample of respondents every two waves starting at Wave 8, respectively. Respondents who were not part of the leave-behind sample or did not return their survey are assigned special missing code .c. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

RwDTRMND indicates to what degree the respondent felt determined in the past 30 days.

RwENTHSTC indicates to what degree the respondent felt enthusiastic in the past 30 days.

RwACTIVE indicates to what degree the respondent felt active in the past 30 days.

RwPROUD indicates to what degree the respondent felt proud in the past 30 days.

RwINTRSTD indicates to what degree the respondent felt interested in the past 30 days.

RwFHAPPY indicates to what degree the respondent felt happy in the past 30 days.

RwATTNTV indicates to what degree the respondent felt attentive in the past 30 days.

RwCONTENT indicates to what degree the respondent felt content in the past 30 days.

RwINSPRD indicates to what degree the respondent felt inspired in the past 30 days.

RwHOPEFUL indicates to what degree the respondent felt hopeful in the past 30 days.

RwALERT indicates to what degree the respondent felt alert in the past 30 days.

RwCALM indicates to what degree the respondent felt calm in the past 30 days.

RwEXCTD indicates to what degree the respondent felt excited in the past 30 days.

SwDTRMND, SwENTHSTC, SwACTIVE, SwPROUD, SwINTRSTD, SwFHAPPY, SwATTNTV, SwCONTENT, SwINSPRD, SwHOPEFUL, SwALERT, SwCALM, and SwEXCTD indicate to what degree the respondent's current wave's spouse felt the particular feeling in the past 30 days, and their values are taken from the corresponding respondent variables. In addition to the special missing codes employed by the respondent variables, the spouse variables employ two additional special missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwPANASP13 is a 13-item index of positive affect and is the mean of RwDTRMND, RwENTHSTC, RwACTIVE, RwPROUD, RwINTRSTD, RwFHAPPY, RwATTNTV, RwCONTENT, RwINSPRD, RwHOPEFUL, RwALERT, RwCALM, and RwEXCTD. RwPANASP13M is the count of the number of missing components for this summary. RwPANASP13 is set to special missing .m if 7 or more items have missing values, that is RwPANASP13M ranges from 7 to 13. These questions are asked in the psychosocial leave-behind survey which was provided to a sub-sample of respondents at Wave 7 and to each half-sample of respondents every two waves starting at Wave 8, respectively. Respondents who were not part of the leave-behind sample or did not return their survey are assigned special missing code .c. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

SwPANASP13 is a 13-item index of positive affect for the respondent's current wave's spouse and its value is taken from the corresponding respondent variable. SwPANASP13M is the count of the number of missing components in this summary and its value is taken from the corresponding respondent variable. In addition to the special missing codes employed by the respondent variables, SwPANASP13 and SwPANASP13M employ two additional special missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Questions related to positive affect items were added to HRS leave-behind survey starting in Wave 9.

### HRS Variables Used:

Wave 9:

LLB027C	q27c. determined
LLB027D	q27d. enthusiastic
LLB027F	q27f. active
LLB027G	q27g. proud
LLB027H	q27h. interested
LLB027K	q27k. happy
LLB027L	q27l. bored
LLB027P	q27p. attentive
LLB027Q	q27q. content
LLB027T	q27t. inspired
LLB027U	q27u. hopeful
LLB027V	q27v. alert
LLB027X	q27x. calm

LLB027Y	q27y. excited
Wave 10:	
MLB027C	q27c. determined
MLB027D	q27d. enthusiastic
MLB027F	q27f. active
MLB027G	q27g. proud
MLB027H	q27h. interested
MLB027K	q27k. happy
MLB027P	q27p. attentive
MLB027Q	q27q. content
MLB027T	q27t. inspired
MLB027U	q27u. hopeful
MLB027V	q27v. alert
MLB027X	q27x. calm
MLB027Y	q27y. excited
Wave 11:	
NLB027C	q27c. determined
NLB027D	q27d. enthusiastic
NLB027F	q27f. active
NLB027G	q27g. proud
NLB027H	q27h. interested
NLB027K	q27k. happy
NLB027P	q27p. attentive
NLB027Q	q27q. content
NLB027T	q27t. inspired
NLB027U	q27u. hopeful
NLB027V	q27v. alert
NLB027X	q27x. calm
NLB027Y	q27y. excited
Wave 12:	
OLB026C	q26c. determined
OLB026D	q26d. enthusiastic
OLB026F	q26f. active
OLB026G	q26g. proud
OLB026H	q26h. interested
OLB026K	q26k. happy
OLB026P	q26p. attentive
OLB026Q	q26q. content
OLB026T	q26t. inspired
OLB026U	q26u. hopeful
OLB026V	q26v. alert
OLB026X	q26x. calm
OLB026Y	q26y. excited
Wave 13:	
PLB026C	q26c. determined
PLB026D	q26d. enthusiastic
PLB026F	q26f. active
PLB026G	q26g. proud
PLB026H	q26h. interested

## How Constructed:

The following variables indicate to what degree the respondent felt a particular feeling in the past 30 days. Each of these variables are assigned the following 5-point values: 1.Not at all, 2.A little, 3.Moderately, 4.Quite a bit, 5.Very much. Note that this scale is reversed from the how the scale was asked in the HRS to ensure that higher values represent more negative feelings. These questions are asked in the psychosocial leave-behind survey which was provided to a sub-sample of respondents at Wave 7 and to each half-sample of respondents every two waves starting at Wave 8, respectively. Respondents who were not part of the leave-behind sample or did not return their survey are assigned special missing code .c. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

RwAFRAID indicates to what degree the respondent felt afraid in the past 30 days.

RwFUPSET indicates to what degree the respondent felt upset in the past 30 days.

RwGUILTY indicates to what degree the respondent felt guilty in the past 30 days.

RwSCARED indicates to what degree the respondent felt scared in the past 30 days.

RwFRUSTRAT indicates to what degree the respondent felt frustrated in the past 30 days.

RwBORED indicates to what degree the respondent felt bored in the past 30 days.

RwHOSTILE indicates to what degree the respondent felt hostile in the past 30 days.

RwJITTERY indicates to what degree the respondent felt jittery in the past 30 days.

RwASHAMD indicates to what degree the respondent felt ashamed in the past 30 days.

RwNRVOUS indicates to what degree the respondent felt nervous in the past 30 days.

RwPFSAD indicates to what degree the respondent felt sad in the past 30 days.

RwDSTRES indicates to what degree the respondent felt distressed in the past 30 days.

SwAFRAID, SwFUPSET, SwGUILTY, SwSCARED, SwFRUSTRAT, SwBORED, SwHOSTILE, SwJITTERY, SwASHAMD, SwNRVOUS, SwPFSAD, and SwDSTRES indicate to what degree the respondent's current wave's spouse felt the particular feeling in the past 30 days, and their values are taken from the corresponding respondent variables. In addition to the special missing codes employed by the respondent variables, the spouse variables employ two additional special missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwPANASN12 is a 12-item index of negative affect and is the mean of RwAFRAID, RwfUPSET, RwgUILTY, RwsCARED, RwfRUSTRAT, RwbORED, RwhOSTILE, RwjITTERY, RwashAMD, RwnRVOUS, RwpFSAD, and RwdSTRES. RwPANASN12M is the count of the number of missing components for this summary. RwPANASN12 is set to .m missing if 7 or more items have missing values, that is RwPANASN12M ranges from 7 to 12. These questions are asked in the psychosocial leave-behind survey which was provided to a sub-sample of respondents at Wave 7 and to each half-sample of respondents every two waves starting at Wave 8, respectively. Respondents who were not part of the leave-behind sample or did not return their survey are assigned special missing code .c. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

SwPANASN12 is a 12-item index of negative affect for the respondent's current wave's spouse and its value is taken from the corresponding respondent variable. SwPANASN12M is the count of the number of missing components for this summary and its value is taken from the corresponding respondent variable. In addition to the special missing codes employed by the respondent variables, SwPANASN12 and SwPANASN12M employ two additional special missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Questions related to negative affect items were added to HRS leave-behind survey starting in Wave 9.

### HRS Variables Used:

Wave 9:

LLB027A	q27a. afraid
LLB027B	q27b. upset
LLB027E	q27e. guilty
LLB027I	q27i. scared
LLB027J	q27j. frustrated
LLB027L	q27l. bored
LLB027M	q27m. hostile
LLB027N	q27n. jittery
LLB027O	q27o. ashamed
LLB027R	q27r. nervous
LLB027S	q27s. sad
LLB027W	q27w. distressed

Wave 10:

MLB027A	q27a. afraid
---------	--------------

MLB027B q27b. upset  
MLB027E q27e. guilty  
MLB027I q27i. scared  
MLB027J q27j. frustrated  
MLB027L q27l. bored  
MLB027M q27m. hostile  
MLB027N q27n. jittery  
MLB027O q27o. ashamed  
MLB027R q27r. nervous  
MLB027S q27s. sad  
MLB027W q27w. distressed

## Wave 11:

NLB027A q27a. afraid  
NLB027B q27b. upset  
NLB027E q27e. guilty  
NLB027I q27i. scared  
NLB027J q27j. frustrated  
NLB027L q27l. bored  
NLB027M q27m. hostile  
NLB027N q27n. jittery

### How Constructed:

The following variables indicate how much of the time the respondent experienced a particular feeling during the past 30 days. Each of these variables are assigned the following 5-point values: 1.None of the time, 2.A little of the time, 3.Some of the time, 4.Most of the time, 5.All of the time. Note that this scale is reversed from the how the scale was asked in the HRS to ensure that higher values represent more positive feelings. These questions are asked in the psychosocial leave-behind survey which was provided to a sub-sample of respondents at Wave 7 and to each half-sample of respondents every two waves starting at Wave 8, respectively. Respondents who were not part of the leave-behind sample or did not return their survey are assigned special missing code .c. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

RwMDCHR indicates how much of the time the respondent felt cheerful during the past 30 days.

RwMDGDS indicates how much of the time the respondent felt in good spirits during the past 30 days.

RwMDXHP indicates how much of the time the respondent felt extremely happy during the past 30 days.

RwMDCLM indicates how much of the time the respondent felt calm during the past 30 days.

RwMDSAT indicates how much of the time the respondent felt satisfied during the past 30 days.

RwMDFLF indicates how much of the time the respondent felt full of life during the past 30 days.

RwMDHAP indicates how much of the time the respondent felt happy during the past 30 days.

RwMDENL indicates how much of the time the respondent felt they enjoyed life during the past 30 days.

SwMDCHR, SwMDGDS, SwMDXHP, SwMDCLM, SwMDSAT, SwMDFLF, SwMDHAP, and SwMDENL indicate how much of the time the respondent's current wave's spouse experienced a particular feeling during the past 30 days, and their values are taken from the corresponding respondent variables. In addition to the special missing codes employed by the respondent variables, the spouse variables employ two additional special missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwMDP8 is an 8-item index of positive affect. RwMDP8 is the mean of RwMDCHR, RwMDGDS, RwMDXHP, RwMDCLM, RwMDSAT, RwMDFLF, RwMDHAP, and RwMDENL. RwMDP8M is the count of the number of missing components for this summary. RwMDP8 is set to .m missing if 5 or more items have missing values, that is RwMDP8M ranges from 5 to 8. These questions are asked in the psychosocial leave-behind survey which was provided to a sub-sample of respondents at Wave 7 and to each half-sample of respondents every two waves starting at Wave 8, respectively. Respondents who were not part of the leave-behind sample or did not return their survey are assigned special missing code .c. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

SwMDP8 and SwMDP8M are an index of positive affect and count of missing components for the respondent's current wave's spouse, and their values are taken from the corresponding respondent variables. In addition to the special missing codes employed by the respondent variables, SwMDP8 and SwMDP8M employ two additional special missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Questions related to how much of the time a respondent felt a particular feeling during the past 30 days were only included as part of the Wave 8 HRS psychosocial leave-behind survey.

### HRS Variables Used:

Wave 8:

KLB027A	q27a. feel cheerful
KLB027B	q27b. in good spirits
KLB027C	q27c. extremely happy
KLB027D	q27d. calm and peaceful
KLB027E	q27e. satisfied
KLB027F	q27f. full of life
KLB027G	q27g. you were happy
KLB027H	q27h. you enjoyed life

### How Constructed:

The following variables indicate how much of the time the respondent experienced a particular feeling during the past 30 days. Each of these variables are assigned the following 5-point values: 1.None of the time, 2.A little of the time, 3.Some of the time, 4.Most of the time, 5.All of the time. Note that this scale is reversed from the how the scale was asked in the HRS to ensure that higher values represent more negative feelings. These questions are asked in the psychosocial leave-behind survey which was provided to a sub-sample of respondents at Wave 7 and to each half-sample of respondents every two waves starting at Wave 8, respectively. Respondents who were not part of the leave-behind sample or did not did not return their survey are assigned special missing code .c. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

RwMDDEP indicates how much of the time the respondent felt so depressed that nothing could cheer you up during the past 30 days.

RwMDHPL indicates how much of the time the respondent felt hopeless during the past 30 days.

RwMDRTL indicates how much of the time the respondent felt restless or fidgety during the past 30 days.

RwMDEFT indicates how much of the time the respondent felt everything was an effort during the past 30 days.

RwMDWTL indicates how much of the time the respondent felt worthless during the past 30 days.

RwMDNER indicates how much of the time the respondent felt nervous during the past 30 days.

RwMDNGO indicates how much of the time the respondent felt they could not get going during the past 30 days.

RwMDSRT indicates how much of the time the respondent felt their sleep was restless during the past 30 days.

RwMDLON indicates how much of the time the respondent felt lonely during the past 30 days.

RwMDSAD indicates how much of the time the respondent felt sad during the past 30 days.

SwMDDEP, SwMDHPL, SwMDRTL, SwMDEFT, SwMDWTL, SwMDNER, SwMDNGO, SwMDSRT, SwMDLON, and SwMDSAD indicate how much of the time the respondent's current wave's spouse experienced a particular feeling during the past 30 days, and their values are taken from the corresponding respondent variables. In addition to the

special missing codes employed by the respondent variables, the spouse variables employ two additional special missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwMDN10 is a 10-item index of negative affect. RwMDN10 is the mean of RwMDDEP, RwMDHPL, RwMDRTL, RwMDEFT, RwMDWTL, RwMDNER, RwMDNGO, RwMDSRT, RwMDLON, and RwMDSAD. RwMDN10M is the count of the number of missing components for this summary. RwMDN10 is set to .m missing if 6 or more items have missing values, that is RwMDN10M ranges from 6 to 10. These questions are asked in the psychosocial leave-behind survey which was provided to a sub-sample of respondents at Wave 7 and to each half-sample of respondents every two waves starting at Wave 8, respectively. Respondents who were not part of the leave-behind sample or did not did not return their survey are assigned special missing code .c. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

SwMDN10 is a 10-item index of negative affect for the respondent's current wave's spouse and its value is taken from the corresponding respondent variable. SwMDN10M is the count of missing components for this summary and its value is taken from the corresponding respondent variable. In addition to the special missing codes employed by the respondent variables, SwMDN10 and SwMDN10M employ two additional special missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Questions related to how much of the time a respondent felt a particular feeling during the past 30 days were only included as part of the Wave 8 HRS psychosocial leave-behind survey.

### HRS Variables Used:

Wave 8:

KLB027I	q27i. depressed nothing cheering
KLB027J	q27j. hopeless
KLB027K	q27k. restless or fidgety
KLB027L	q27l. everything was an effort
KLB027M	q27m. worthless
KLB027N	q27n. nervous
KLB027O	q27o. could not get going
KLB027P	q27p. sleep is restless
KLB027Q	q27q. lonely
KLB027R	q27r. sad

### How Constructed:

The following variables indicate how often the respondent feels like a particular statement - related to their quality of life - applies to them. Each of these items are coded to fit the following 4-point scale: 0.Never, 1.Not often, 2.Sometimes, 3.Often. The psychosocial leave-behind survey was provided to a sub-sample of respondents at Wave 7. These questions are asked in the leave-behind questionnaire, so if the respondent did not return the self-completion questionnaire, then these variables are assigned

special missing value .c. In Wave 7, not everyone who completed the self-completion questionnaire received a psychosocial survey, and in these cases the variables are assigned special missing value .s. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

RwAGEPRV indicates how often the respondent feels the following statement applies to them: "My age prevents me from doing the things I would like to."

RwOUTCON indicates how often the respondent feels the following statement applies to them: "I feel that what happens to me is out of my control."

RwFREEPLN indicates how often the respondent feels the following statement applies to them: "I feel free to plan for the future."

RwFLFTOUT indicates how often the respondent feels the following statement applies to them: "I feel left out of things."

RwCANDO indicates how often the respondent feels the following statement applies to them: "I can do the things that I want to do."

RwFAMPRV indicates how often the respondent feels the following statement applies to them: "Family responsibilities prevent me from doing what I want to do."

RwDOWPLS indicates how often the respondent feels the following statement applies to them: "I feel that I can do as I please."

RwHLTHSTP indicates how often the respondent feels the following statement applies to them: "My health stops me from doing things I want to do."

RwMSHTGE indicates how often the respondent feels the following statement applies to them: "Shortage of money stops me from doing things I want to do."

RwLOOKFWD indicates how often the respondent feels the following statement applies to them: "I look forward to each day."

RwLFEMEAN indicates how often the respondent feels the following statement applies to them: "I feel that my life has meaning."

RwENJDO indicates how often the respondent feels the following statement applies to them: "I enjoy the things that I do."

RwENJCOMPNY indicates how often the respondent feels the following statement applies to them: "I enjoy being in the company of others."

RwSNSHAPPY indicates how often the respondent feels the following statement applies to them: "On balance, I look back on my life with a sense of happiness."

RwFENERG indicates how often the respondent feels the following statement applies to them: "I feel full of energy these days."

RwCHSNTH indicates how often the respondent feels the following statement applies to them: "I choose to do things that I have never done before."

RwLFTRNOUT indicates how often the respondent feels the following statement applies to them: "I feel satisfied with the way my life has turned out."

RwLIFEOPP indicates how often the respondent feels the following statement applies to them: "I feel that life is full of opportunities."

RwFUTREGD indicates how often the respondent feels the following statement applies to them: "I feel that the future looks good for me."

SwAGEPRV, SwOUTCON, SwFREEPLN, SwLFTOUT, SwCANDO, SwFAMPRV, SwDOWPLS, SwHLTHSTP, SwMSHTGE, SwLOOKFWD, SwLFEMEAN, SwENJDO, SwENJCOMPNY, SwSNSHAPPY, SwFENERG, SwCHSNTH, SwLFTRNOUT, SwLIFEOPP, and SwFUTREGD indicate how often the respondent's current wave's spouse feels a particular statement - related to their quality of life - applies to them, and their values are taken from the corresponding respondent variables. In addition to the special missing codes employed by the respondent variables, the spouse variables employ two additional special missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwCNTRLNDX6 and RwCNTRLNDX5 are 6-item and 5-item indices of control, respectively. In order to calculate these summary scores, RwAGEPRV, RwOUTCON, RwFLFTOUT, and RwFAMPRV are reverse-coded so that higher scores indicate more feelings of control.  $RwCNTRLNDX6 = (3 - RwAGEPRV) + (3 - RwOUTCON) + RwFREEPLN + (3 - RwFLFTOUT) + RwCANDO + (3 - RwFAMPRV)$ .  $RwCNTRLNDX5 = (3 - RwAGEPRV) + (3 - RwOUTCON) + (3 - RwFLFTOUT) + RwCANDO + (3 - RwFAMPRV)$ . RwCNTRLNDX6 and RwCNTRLNDX5 are only summed if none of the components are missing. If any components are missing, then RwCNTRLNDX6 and RwCNTRLNDX5 are assigned special missing value .m. The psychosocial leave-behind survey was provided to a sub-sample of respondents at Wave 7. If the respondent did not return the self-completion questionnaire, then RwCNTRLNDX6 and RwCNTRLNDX5 are assigned special missing value .c. In Wave 7, not everyone who completed the self-completion questionnaire received a psychosocial survey, and in these cases RwCNTRLNDX6 and RwCNTRLNDX5 are assigned special missing value .s. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

RwAUTONDX5 and RwAUTONDX3 are 5-item and 3-item indices of autonomy, respectively. In order to calculate these summary scores, RwHLTHSTP and RwMSHTGE are reverse-coded so that higher scores indicate more feelings of autonomy.  $RwAUTONDX5 = RwDOWPLS + (3 - RwHLTHSTP) + (3 - RwMSHTGE) + RwLOOKFWD + RwLFEMEAN$ .  $RwAUTONDX3 = (3 - RwMSHTGE) + RwLOOKFWD + RwLFEMEAN$ . RwAUTONDX5 and RwAUTONDX3 are only summed if none of the components are missing. If any components are missing, then RwAUTONDX5 and RwAUTONDX3 are assigned special missing value .m. The psychosocial leave-behind survey was provided to a sub-sample of respondents at Wave 7. If the respondent did not return the self-completion questionnaire, then RwAUTONDX5 and RwAUTONDX3 are assigned special missing value .c. In Wave 7, not everyone who completed the self-completion questionnaire received a psychosocial survey, and in these cases RwAUTONDX5 and RwAUTONDX3 are assigned special missing value .s. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

RwPLSRNDX4 and RwPLSRNDX2 are 4-item and 2-item indices of pleasure, respectively.  $RwPLSRNDX4 = RwENJDO + RwENJCOMPNY + SwSNSHAPPY + SwFENERG$ .  $RwPLSRNDX2 = SwSNSHAPPY + SwFENERG$ . RwPLSRNDX4 and RwPLSRNDX2 are only summed if none of the components are missing. If any components are missing, then RwPLSRNDX4 and RwPLSRNDX2 are assigned special missing value .m. The psychosocial leave-behind survey was provided to a sub-sample of respondents at Wave 7. If the respondent did not return the self-completion questionnaire, then RwPLSRNDX4 and RwPLSRNDX2 are assigned special missing value .c. In Wave 7, not everyone who completed the self-completion questionnaire received a psychosocial survey, and in these cases RwPLSRNDX4 and RwPLSRNDX2 are assigned special missing value .s. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

RwSLFRLNDX4 and RwSLFRLNDX2 are 4-item and 2-item indices of self-realization, respectively.  $RwSLFRLNDX4 = SwCHSNTH + SwLFTRNOUT + SwLIFEOPP + SwFUTREGD$ .  $RwSLFRLNDX2 = SwLIFEOPP + SwFUTREGD$ . RwSLFRLNDX4 and RwSLFRLNDX2 are only summed if none of the components are missing. If any components are missing, then RwSLFRLNDX4 and RwSLFRLNDX2 are assigned special missing value .m. The psychosocial leave-behind survey was provided to a sub-sample of respondents at Wave 7. If the respondent did not return the self-completion questionnaire, then RwSLFRLNDX4 and RwSLFRLNDX2 are assigned special missing value .c. In Wave 7, not everyone who completed the self-completion questionnaire received a psychosocial survey, and in these cases RwSLFRLNDX4 and RwSLFRLNDX2 are assigned special missing value .s. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

RwCASP19 and RwCASP12 are 19-item and 12-item indices of quality of life, respectively. In order to calculate these summary scores, RwAGEPRV, RwOUTCON, RwFLFTOUT, RwFAMPRV, RwHLTHSTP and RwMSHTGE are reverse-coded so that higher scores indicate higher quality of life.  $RwCASP19 = (3 - RwAGEPRV) + (3 - RwOUTCON) + RwFREEPLN + (3 - RwFLFTOUT) + RwCANDO + (3 - RwFAMPRV) + RwDOWPLS + (3 - RwHLTHSTP) + (3 - RwMSHTGE) + RwLOOKFWD + RwLFEMEAN + RwENJDO + RwENJCOMPNY + SwSNSHAPPY + SwFENERG +$

RwCHSNTH + RwLFTRNOUT + RwLIFEOPP + RwfUTREGD. RwCASP12 sums across 12 frequently used measures and equals (3-RwAGEPRV) + (3-RwOUTCON) + (3-RwFLFTOUT) + RwcANDO + (3-RwFAMPRV) + (3-RwMSHTGE) + RwLOOKFWD + RwLFEMEAN + RwsNSHAPPY + RwfENERG + RwLIFEOPP + RwfUTREGD. RwCASP19 and RwCASP12 are only summed if none of the components are missing. If any components are missing, then RwCASP19 and RwCASP12 are assigned special missing value .m. The psychosocial leave-behind survey was provided to a sub-sample of respondents at Wave 7. If the respondent did not return the self-completion questionnaire, then RwCASP19 and RwCASP12 are assigned special missing value .c. In Wave 7, not everyone who completed the self-completion questionnaire received a psychosocial survey, and in these cases RwCASP19 and RwCASP12 are assigned special missing value .s. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

SwCNTRLNDX6, SwCNTRLNDX5, SwAUTONDX5, SwAUTONDX3, SwPLSRNDX4, SwPLSRNDX2, SwSLFRLNDX4, SwSLFRLNDX2, SwCASP19, and SwCASP12 are indices of control, autonomy, pleasure, self-realization, and quality of life, respectively. Their values are taken from the corresponding respondent variables. In addition to the special missing codes employed by the respondent variables, the spouse variables employ two additional special missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Questions related to quality of life are only included as part of the Wave 7 psychosocial leave-behind survey.

In Wave 7, those eligible for a self-completion questionnaire were split between receiving a psychosocial questionnaire and a disability questionnaire. As such, these variables use a special missing .s in Wave 7 if the respondent was asked to complete the disability questionnaire and not the psychosocial questionnaire.

## HRS Variables Used:

Wave 7:

JLB503A	q3a. age prevents me from doing things
JLB503B	q3b. things happen out of my control
JLB503C	q3c. feel free to plan for the future
JLB503D	q3d. feel left out of things
JLB503E	q3e. do things that i want to do
JLB503F	q3f. family responsibilities prevent me
JLB503G	q3g. do as i please
JLB503H	q3h. health stops me from doing things
JLB503I	q3i. shortage of money prevents me
JLB503J	q3j. look forward to each day
JLB503K	q3k. life has meaning
JLB503L	q3l. enjoy things that i do
JLB503M	q3m. enjoy the company of others
JLB503N	q3n. life has sense of happiness
JLB503O	q3o. feel full of energy these days
JLB503P	q3p. choose to do new things
JLB503Q	q3q. satisfied w/ how my life turned out
JLB503R	q3r. life is full of opportunities
JLB503S	q3s. future looks good for me

## How Constructed:

The following variables pertain to the respondent's Ryff's Psychological Well-being responses. The respondent is given the following prompt, "Please indicate how strongly you agree or disagree with each of the following statements."

RwRPLNFUT, RwRACTTRV, RwRACTPLN, RWRNSNSACC, RWRDONALL, RwRLIVONED, and RWRNSNSDIR indicate how much the respondent agrees with specific statements about their purpose of life.

RwRPLNFUT indicates how much the respondent agrees with the statement "I enjoy making plans for the future and working to make them a reality." This question was included in the HRS psychosocial leave-behind survey starting in Wave 7.

RwRACTTRV indicates how much the respondent agrees with the statement "My daily activities often seem trivial and unimportant to me." This question was included in the HRS psychosocial leave-behind survey starting in Wave 8.

RwRACTPLN indicates how much the respondent agrees with the statement "I am an active person in carrying out the plans I set for myself." This question was included in the HRS psychosocial leave-behind survey starting in Wave 8.

RWRNSNSACC indicates how much the respondent agrees with the statement "I don't have a good sense of what it is I'm trying to accomplish in life." This question was included in the HRS psychosocial leave-behind survey starting in Wave 8.

RWRDONALL indicates how much the respondent agrees with the statement "I sometimes feel as if I've done all there is to in life." This question was included in the HRS psychosocial leave-behind survey starting in Wave 7.

RwRLIVONED indicates how much the respondent agrees with the statement "I live life one day at a time and don't really think about the future." This question was included in the HRS psychosocial leave-behind survey starting in Wave 7.

RWRNSNSDIR indicates how much the respondent agrees with the statement "I have a sense of direction and purpose in life." This question was included in the HRS psychosocial leave-behind survey starting in Wave 8.

RwRPLNFUT, RwRACTTRV, RwRACTPLN, RWRNSNSACC, RWRDONALL, RwRLIVONED, and RWRNSNSDIR are coded as follows: 1.Strongly disagree, 2.Moderately disagree, 3.Slightly disagree, 4.Slightly agree, 5.Moderately agree, and 6.Strongly agree. These questions are asked in the psychosocial leave-behind survey which was provided to a sub-sample of respondents at Wave 7 and to each half-sample of respondents every two waves starting at Wave 8, respectively. Respondents who were not part of the leave-behind sample or did not did not return their survey are assigned special missing code .c. In Wave 7, not everyone who completed the self-completion questionnaire received a psychosocial survey, and in these cases RwRPLNFUT, RwRACTTRV, RwRACTPLN, RWRNSNSACC, RWRDONALL, RwRLIVONED, and RWRNSNSDIR are assigned special missing value .s. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

RwLFPRPS is a 7-item purpose of life index. In order to calculate this summary score, RwRACTTRV, RWRNSNSACC, RWRDONALL and RwRLIVONED are reverse-coded to have the same directionality of RwRPLNFUT, RwRACTPLN, and RWRNSNSDIR. RwLFPRPS is the mean of RwRPLNFUT, RwRACTTRV, RwRACTPLN, RWRNSNSACC, RWRDONALL, RwRLIVONED, and RWRNSNSDIR. RwLFPRPSM is the count of the number of missing components for this summary. RwLFPRPS is set to .m if 4 or more items have missing values, that is RwLFPRPSM ranges from 4 to 7. These questions are asked in the psychosocial leave-behind survey which was provided to a sub-sample of respondents at Wave 7 and to each half-sample of respondents every two waves starting at Wave 8, respectively. Respondents who were not part of the leave-behind sample or did not did not return their survey are assigned special missing code .c. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

SwRPLNFUT, SwRACTTRV, SwRACTPLN, SwRNSNSACC, SwRDONALL, SwRLIVONED, and SwRSNSDIR indicate how much the respondent's spouse agrees with specific statements about their purpose in life and are taken directly

from the corresponding respondent variables. SwLFPRPS and SwLFPRPSM are summary scores for the respondent's spouse's feelings about their purpose in life, and their values are taken directly from the corresponding respondent variables. In addition to the special missing codes used in the respondent variables, the spouse variables employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwRNXPNDRZ, RwrNWEXPER, RwrRIMPR, RwrRDEVELP, RwrRNEWSIT, RwrRGIMPROV, and RwrRPRLEARN indicate how much the respondent agrees with specific statements about their personal growth. These questions are only included in the HRS psychosocial leave-behind survey at Wave 8.

RwRNXPNDRZ indicates how much the respondent agrees with the statement "I am not interested in activities that will expand my horizons."

RwrNWEXPER indicates how much the respondent agrees with the statement "I think it is important to have new experiences that challenge how I think about myself and the world."

RwrRIMPR indicates how much the respondent agrees with the statement "When I think about it, I haven't really improved much as a person over the years."

RwrRDEVELP indicates how much the respondent agrees with the statement "I have the sense that I have developed a lot as a person over time."

RwrRNEWSIT indicates how much the respondent agrees with the statement "I do not enjoy being in new situations that require me to change my old familiar ways of doing things."

RwrRGIMPROV indicates how much the respondent agrees with the statement "I gave up trying to make big improvements or changes in my life a long time ago."

RwrRPRLEARN indicates how much the respondent agrees with the statement "For me, life has been a continuous process of learning, changing, and growth."

RwRNXPNDRZ, RwrNWEXPER, RwrRIMPR, RwrRDEVELP, RwrRNEWSIT, RwrRGIMPROV, and RwrRPRLEARN are coded as follows: 1.Strongly disagree, 2.Moderately disagree, 3.Slightly disagree, 4.Slightly agree, 5.Moderately agree, and 6.Strongly agree. The psychosocial leave-behind survey was provided to each half-sample of respondents every two waves starting at Wave 8. Respondents who were not part of the leave-behind sample or did not return their survey are assigned special missing code .c. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

RwPRSNLGR is a 7-item personal growth index. In order to calculate this summary score, RwrRNXPNDRZ, RwrRIMPR, RwrRNEWSIT, and RwrRGIMPROV are reverse-coded to have the same directionality of RwrNWEXPER, RwrRDEVELP, and RwrRPRLEARN. RwPRSNLGR is the mean of RwrRNXPNDRZ, RwrNWEXPER, RwrRIMPR, RwrRDEVELP, RwrRNEWSIT, RwrRGIMPROV, and RwrRPRLEARN. RwPRSNLGRM is the count of the number of missing components for this summary. RwPRSNLGR is set to .m if 4 or more items have missing values, that is RwPRSNLGRM ranges from 4 to 7. The psychosocial leave-behind survey was provided to each half-sample of respondents every two waves starting at Wave 8. Respondents who were not part of the leave-behind sample or did not return their survey are assigned special missing code .c. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

SwRNXPNDRZ, SwrNWEXPER, SwrRIMPR, SwrRDEVELP, SwrRNEWSIT, SwrRGIMPROV, and SwrRPRLEARN indicate how much the respondent's spouse agrees with specific statements about their personal growth and are taken directly from the corresponding respondent variables. SwPRSNLGR and SwPRSNLGRM are summary scores for the respondent's spouse's feelings about their personal growth, and their values are taken directly from the corresponding respondent variables. In addition to the special missing codes used in the respondent variables, the spouse variables employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwRLPRSNLTY, RwrRPLSSTRY, RwrRDISACHV, RwrRCONFPOS, RwrRFOTHMR, RwrRATTNPOS, and RwrRFLGOOD indicate how much the respondent agrees with specific statements about their self-acceptance. These questions are only included in the HRS psychosocial leave-behind survey at Wave 8.

RwRLPRSNTY indicates how much the respondent agrees with the statement "I like most parts of my personality."

RwRPLSSTRY indicates how much the respondent agrees with the statement "When I look at the story of my life, I am pleased with how things have turned out so far."

RwRDISACHV indicates how much the respondent agrees with the statement "In many ways, I feel disappointed about my achievements in life."

RwRCONFPOS indicates how much the respondent agrees with the statement "In general, I feel confident and positive about myself."

RwRFOTHMR indicates how much the respondent agrees with the statement "I feel like many of the people I know have gotten more out of life than I have."

RwRATTNPOS indicates how much the respondent agrees with the statement "My attitude about myself is probably not as positive as most people feel about themselves."

RwRFLGOOD indicates how much the respondent agrees with the statement "When I compare myself to friends and acquaintances, it makes me feel good about who I am."

RwRLPRSNTY, RwRPLSSTRY, RwRDISACHV, RwRCONFPOS, RwRFOTHMR, RwRATTNPOS, and RwRFLGOOD are coded as follows: 1.Strongly disagree, 2.Moderately disagree, 3.Slightly disagree, 4.Slightly agree, 5.Moderately agree, and 6.Strongly agree. The psychosocial leave-behind survey was provided to each half-sample of respondents every two waves starting at Wave 8. Respondents who were not part of the leave-behind sample or did not return their survey are assigned special missing code .c. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

RwSLFACPT is a 7-item self-acceptance index. In order to calculate this summary score, RwRFOTHMR, RwRATTNPOS, and RwRDISACHV are reverse-coded to have the same directionality of RwRLPRSNTY, RwRPLSSTRY, RwRCONFPOS, and RwRFLGOOD. RwSLFACPT is the mean of RwRLPRSNTY, RwRPLSSTRY, RwRDISACHV, RwRCONFPOS, RwRFOTHMR, RwRATTNPOS, and RwRFLGOOD. RwSLFACPTM is the count of the number of missing components for this summary. RwSLFACPT is set to .m if 4 or more items have missing values, that is RwSLFACPTM ranges from 4 to 7. The psychosocial leave-behind survey was provided to each half-sample of respondents every two waves starting at Wave 8. Respondents who were not part of the leave-behind sample or did not return their survey are assigned special missing code .c. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

SwRLPRSNTY, SwRPLSSTRY, SwRDISACHV, SwRCONFPOS, SwRFOTHMR, SwRATTNPOS, and SwRFLGOOD indicate how much the respondent's spouse agrees with specific statements about their self-acceptance and are taken directly from the corresponding respondent variables. SwSLFACPT and SwSLFACPTM are summary scores for the respondent's spouse's feelings about their self-acceptance, and their values are taken directly from the corresponding respondent variables. In addition to the special missing codes used in the respondent variables, the spouse variables employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Three questions related to purpose of life were added to HRS leave-behind survey starting in Wave 7: enjoying making plans for the future, feeling they have done all there is to in life, and living life one day at a time. Four additional questions related to purpose of life were added starting in Wave 8: feeling that daily activities often seem trivial, carrying out plans they have set for themselves, feeling they have no sense of what they're trying to accomplish, and having a sense of direction in life.

In Wave 7, those eligible for a self-completion questionnaire were split between receiving a psychosocial questionnaire and a disability questionnaire. As such, these variables use a special missing .s in Wave 7 if the respondent was asked to complete the disability questionnaire and not the psychosocial questionnaire.

Questions related to personal growth and self-acceptance were only included in the HRS leave-behind survey at Wave 8. For this reason, a personal growth index and self-acceptance index can only be generated for Wave 8.

### HRS Variables Used:

#### Wave 7:

JLB506F q6f. not thinking about the future  
 JLB506G q6g. enjoy making plans for the future  
 JLB506I q6i. done all there is to do in life

#### Wave 8:

KLB035A q35a. enjoy making plans for the future  
 KLB035B q35b. daily activities seem trivial  
 KLB035C q35c. active in carrying out own plans  
 KLB035D q35d. no good sense trying to accomplish  
 KLB035E q35e. done all there is to do in life  
 KLB035F q35f. live life one day at a time  
 KLB035G q35g. have a sense of direction in life  
 KLB035H q35h. not interested in activities  
 KLB035I q35i. important to have new experiences  
 KLB035J q35j. not really improved much over yrs  
 KLB035K q35k. developed a lot over time  
 KLB035L q35l. do not enjoy new situations  
 KLB035M q35m. gave up trying to make changes  
 KLB035N q35n. life has been a process of growth  
 KLB035O q35o. others got more out of life  
 KLB035P q35p. feel confident about self  
 KLB035Q q35q. feel good comparing self to friend  
 KLB035R q35r. attitude not as positive as others  
 KLB035S q35s. disappointed about achievements  
 KLB035T q35t. pleased with how things turned out  
 KLB035U q35u. like most parts of my personality

#### Wave 9:

LLB035A q35a. enjoy making plans for the future  
 LLB035B q35b. daily activities seem trivial  
 LLB035C q35c. active in carrying out own plans  
 LLB035D q35d. no good sense trying to accomplish  
 LLB035E q35e. done all there is to do in life  
 LLB035F q35f. live life one day at a time  
 LLB035G q35g. have a sense of direction in life

#### Wave 10:

MLB035A q35a. enjoy making plans for the future  
 MLB035B q35b. daily activities seem trivial  
 MLB035C q35c. active in carrying out own plans  
 MLB035D q35d. no good sense trying to accomplish  
 MLB035E q35e. done all there is to do in life  
 MLB035F q35f. live life one day at a time  
 MLB035G q35g. have a sense of direction in life

#### Wave 11:

NLB035A q35\_a. enjoy making plans for the future  
 NLB035B q35\_b. daily activities seem trivial  
 NLB035C q35\_c. active in carrying out own plans  
 NLB035D q35\_d. no good sense trying to accomplish  
 NLB035E q35\_e. done all there is to do in life  
 NLB035F q35\_f. live life one day at a time  
 NLB035G q35\_g. have a sense of direction in life

#### Wave 12:

OLB033A q33\_1. enjoy making plans for the future  
 OLB033B q33\_2. daily activities seem trivial  
 OLB033C q33\_3. active in carrying out own plans  
 OLB033D q33\_4. no good sense trying to accomplish  
 OLB033E q33\_5. done all there is to do in life  
 OLB033F q33\_6. live life one day at a time

OLB033G q33\_7. have a sense of direction in life

Wave 13:

PLB033A q33\_1. enjoy making plans for the future

PLB033B q33\_2. daily activities seem trivial

PLB033C q33\_3. active in carrying out own plans

PLB033D q33\_4. no good sense trying to accomplish

PLB033E q33\_5. done all there is to do in life

PLB033F q33\_6. live life one day at a time

PLB033G q33\_7. have a sense of direction in life

Wave 14:

QLB033A q33a. enjoy making plans

QLB033B q33b. daily activities seem trivial

QLB033C q33c. active carrying out own plans

QLB033D q33d. no sense what trying

QLB033E q33e. done all in life

QLB033F q33f. live life one day at a time

QLB033G q33g. have direction in life

Wave 15:

RLB033A q33a. enjoy making plans

RLB033B q33b. daily activities seem trivial

RLB033C q33c. active carrying out own plans

RLB033D q33d. no sense what trying

RLB033E q33e. done all in life

RLB033F q33f. live life one day at a time

RLB033G q33g. have direction in life

## How Constructed:

The following variables pertain to the respondent's experience yesterday. The respondent is given the following prompt, "Now, please pause briefly to think about yesterday, from the morning until the end of the day. Think about where you were, what you were doing, who you were with, and how you felt."

RwDRDAY indicates the day of the week yesterday, and is coded as follows: 1.Monday, 2.Tuesday, 3.Wednesday, 4.Thursday, 5.Friday, 6.Saturday, 7.Sunday.

RwDRWAKETM and RwDRSLEEPTM indicate the time the respondent woke up and went to sleep at the end of the day yesterday, respectively, and are provided as continuous values.

RwDRDATEMON indicates the month of yesterday's date, and is coded as follows: 1.January, 2.February, 3.March, 4.April, 5.May, 6.June, 7.July, 8.August, 9.September, 10.October, 11.November, 12.December.

RwDRDATEDAY indicates the day of yesterday's date, and is provided as a continuous value.

RwDRWLRSTD indicates whether the respondent felt well-rested yesterday morning (that is they slept well the night before). RwDRWLRSTD is coded as 0 for no, and 1 for yes.

RwDRNRMLDAY indicates whether yesterday was a normal day for the respondent or if something unusual happened. RwDRNRMLDAY is coded as follows: 1.No, my day included unusually good things, 2.Yes, just a normal day, 3.No, my day included unusually bad (stressful) things.

RwDRHLTHYES indicates the respondent's self-reported rating of their health yesterday, and is coded as follows: 1.Excellent, 2.Very good, 3.Good, 4.Fair, 5.Poor.

These questions were added to the HRS psychosocial leave-behind survey starting at Wave 11. If the respondent did not return the self-completion questionnaire, then these variables are assigned special missing value .c. RwDRDATEMON and RwDRDATEDAY are assigned special missing code .i in Waves 11 and 12 if an invalid month or day was provided. For all variables, don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

SwDRDAY, SwDRWAKETM, SwDRSLEEPTM, SwDRDATEMON, SwDRDATEDAY, SwDRWLRSTD, SwDRNRMLDAY, and SwDRHLTHYES are variables indicating the respondent's spouse's experience yesterday, and their values are taken directly from the corresponding respondent variables. In addition to the special missing codes used in the respondent variables, the spouse variables employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Questions related to characteristics of the day and self-reported health yesterday were added to HRS leave-behind survey starting in Wave 11.

In Waves 11 and 12, invalid month and date values are present in the data and are assigned special missing code .i.

## HRS Variables Used:

### Wave 11:

NLB045	q45. day of the week yesterday
NLB046_DA	q46_da. date yesterday - day
NLB046_MO	q46_mo. date yesterday - month
NLB047_AP	q47_ap. time woke up yesterday - am or pm
NLB047_HR	q47_hr. time woke up yesterday - hour
NLB047_MI	q47_mi. time woke up yesterday - minute
NLB048_AP	q48_ap. time went to sleep yesterday - am or pm
NLB048_HR	q48_hr. time went to sleep yesterday - hour
NLB048_MI	q48_mi. time went to sleep yesterday - minute
NLB051	q51. felt well-rested yesterday
NLB052	q52. how health was yesterday
NLB053	q53. something unusual yesterday

### Wave 12:

OLB038	q38. day of the week yesterday
OLB039_DA	q39_da. date yesterday - day
OLB039_MO	q39_mo. date yesterday - month
OLB040_AP	q40_ap. time woke up yesterday - am or pm
OLB040_HR	q40_hr. time woke up yesterday - hour
OLB040_MI	q40_mi. time woke up yesterday - minute
OLB041_AP	q41_ap. time went to sleep yesterday - am or pm
OLB041_HR	q41_hr. time went to sleep yesterday - hour
OLB041_MI	q41_mi. time went to sleep yesterday - minute
OLB044	q44. felt well-rested yesterday
OLB045	q45. how health was yesterday
OLB046	q46. something unusual yesterday

### Wave 13:

PLB038	q38. day of the week yesterday
PLB039_DA	q39_da. date yesterday - day

PLB039\_MO q39\_mo. date yesterday - month  
 PLB040\_AP q40\_ap. time woke up yesterday - am or pm  
 PLB040\_HR q40\_hr. time woke up yesterday - hour  
 PLB040\_MI q40\_mi. time woke up yesterday - minute  
 PLB041\_AP q41\_ap. time went to sleep yesterday - am or pm  
 PLB041\_HR q41\_hr. time went to sleep yesterday - hour  
 PLB041\_MI q41\_mi. time went to sleep yesterday - minute  
 PLB044 q44. felt well-rested yesterday  
 PLB045 q45. how health was yesterday  
 PLB046 q46. something unusual yesterday

## Wave 14:

QLB038 q38. day of the week yesterday  
 QLB039\_DA q39\_da. date yesterday  
 QLB039\_MO q39\_mo. month yesterday  
 QLB040\_AP q40\_ap. woke up - am/pm  
 QLB040\_HR q40\_hr. hour  
 QLB040\_MI q40\_min. minutes  
 QLB041\_AP q41\_ap. go to sleep - am/pm  
 QLB041\_HR q41\_hr. hour  
 QLB041\_MI q41\_min. minutes  
 QLB044 q44. felt well-rested  
 QLB045 q45. how health was  
 QLB046 q46. something unusual

## Wave 15:

RLB039 q39. day of the week yesterday  
 RLB040\_DA q40\_dy. date yesterday  
 RLB040\_MO q40\_mo. month yesterday  
 RLB041\_AP q41\_am. woke up - am/pm yesterday  
 RLB041\_HR q41\_hr. hour woke up yesterday  
 RLB041\_MI q41\_min. minutes woke up yesterday  
 RLB042\_AP q42\_am. sleep - am/pm yesterday  
 RLB042\_HR q42\_hr. hour sleep yesterday  
 RLB042\_MI q42\_min. minutes sleep yesterday  
 RLB045 q45. felt well-rested  
 RLB046 q46. how health was  
 RLB047 q47. something unusual

## How Constructed:

The following variables pertain to the respondent's experience yesterday. The respondent is asked to rate how much they experienced a particular feeling yesterday. These questions were added to the HRS psychosocial leave-behind survey starting at Wave 11. These questions are asked in the self-completion questionnaire, so if the respondent did not return the self-completion questionnaire, then these variables are assigned special missing value .c. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

RwYDFRUST indicates how frustrated the respondent felt yesterday.

RwYDSAD indicates how sad the respondent felt yesterday.

RwYDENTHU indicates how enthusiastic the respondent felt yesterday.

RwYDLONELY indicates how lonely the respondent felt yesterday.

RwYDCONTENT indicates how content the respondent felt yesterday.

RwYDWORRY indicates how worried the respondent felt yesterday.

RwYDBORED indicates how bored the respondent felt yesterday.

RwYDHAPPY indicates how happy the respondent felt yesterday.

RwYDANGRY indicates how angry the respondent felt yesterday.

RwYDTIRED indicates how tired the respondent felt yesterday.

RwYDSTRESS indicates how stressed the respondent felt yesterday.

The preceding variables are coded as: 1.not at all, 2.a little, 3.somewhat, 4.quite a bit, 5.very.

RwYDPAIN indicates how much pain the respondent felt yesterday. RwYDPAIN is coded as: 1.none, 2.a little, 3.some, 4.quite a bit, 5.a lot.

SwYDFRUST, SwYDSAD, SwYDENTHU, SwYDLONELY, SwYDCONTENT, SwYDWORRY, SwYDBORED, SwYDHAPPY, SwYDANGRY, SwYDTIRED, SwYDSTRESS, and SwYDPAIN are variables indicating the respondent's spouse's experience yesterday, and their values are taken directly from the corresponding respondent variables. In addition to the special missing codes used in the respondent variables, the spouse variables employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwOVEXPOS3 is a 3-item index of overall experienced positive affect yesterday. RwOVEXPOS3 is the mean of RwYDENTHU, RwYDCONTENT, and RwYDHAPPY. RwOVEXPOS3M is the count of the number of missing components for this summary. RwOVEXPOS3 is set to .m if more than 1 item has a missing value, that is RwOVEXPOS3M ranges from 2 to 3. These questions were added to the HRS psychosocial leave-behind survey starting at Wave 11.

If the respondent did not return the self-completion questionnaire, then RwoVEXPOS3 and RwoVEXPOS3M are assigned special missing value .c. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

SwOVEXPOS3 is a 3-item index of overall experienced positive affect yesterday for the respondent's current wave's spouse and its value is taken from the corresponding respondent variable. SwOVEXPOS3M is the count of missing components for this summary and its value is taken from the corresponding respondent variable. In addition to the special missing codes used in the respondent variables, the spouse variables employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwoVEXNEG6 is a 6-item index of overall experienced negative affect yesterday. RwoVEXNEG6 is the mean of RwyDFRUST, RwyDSAD, RwyDLONELY, RwyDWORRY, RwyDBORED, and RwyDANGRY. RwoVEXNEG6M is the count of the number of missing components for this summary. RwoVEXNEG6M is set to .m if more than 2 items have a missing value, that is RwoVEXNEG6M ranges from 3 to 6. These questions were added to the HRS psychosocial leave-behind survey starting at Wave 11. If the respondent did not return the self-completion questionnaire, then RwoVEXNEG6 and RwoVEXNEG6M are assigned special missing value .c. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

SwOVEXNEG6 is a 6-item index of overall experienced negative affect yesterday for the respondent's current wave's spouse and its value is taken from the corresponding respondent variable. SwOVEXNEG6M is the count of missing components for this summary and its value is taken from the corresponding respondent variable. In addition to the special missing codes used in the respondent variables, the spouse variables employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwoVEXPSY3 is a 3-item index of overall experienced psychosomatic symptoms yesterday. RwoVEXPSY3 is the mean of RwyDTIRED, RwyDSTRESS, and RwyDPAIN. RwoVEXPSY3MA is the count of the number of missing components for this summary. RwoVEXPSY3 is set to .m if more than 1 item has a missing value, that is RwoVEXPSY3M ranges from 2 to 3. These questions were added to the HRS psychosocial leave-behind survey starting at Wave 11. If the respondent did not return the self-completion questionnaire, then RwoVEXPSY3 and RwoVEXPSY3M are assigned special missing value .c. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

SwOVEXPSY3 is a 3-item index of overall experienced psychosomatic symptoms yesterday for the respondent's current wave's spouse and its value is taken from the corresponding respondent variable. SwOVEXPSY3M is the count of missing components for this summary and its value is taken from the corresponding respondent variable. In addition to the special missing codes used in the respondent variables, the spouse variables employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Questions related to overall experienced well-being yesterday were added to HRS leave-behind survey starting in Wave 11.

### HRS Variables Used:

Wave 11:

NLB049A	q49_a. frustrated
NLB049B	q49_b. sad
NLB049C	q49_c. enthusiastic
NLB049D	q49_d. lonely
NLB049E	q49_e. content
NLB049F	q49_f. worried
NLB049G	q49_g. bored

NLB049H	q49_h. happy
NLB049I	q49_i. angry
NLB049J	q49_j. tired
NLB049K	q49_k. stressed
NLB050	q50. felt pain yesterday
Wave 12:	
OLB042A	q42a. frustrated
OLB042B	q42b. sad
OLB042C	q42c. enthusiastic
OLB042D	q42d. lonely
OLB042E	q42e. content
OLB042F	q42f. worried
OLB042G	q42g. bored
OLB042H	q42h. happy
OLB042I	q42i. angry
OLB042J	q42j. tired
OLB042K	q42k. stressed
OLB043	q43. felt pain yesterday
Wave 13:	
PLB042A	q42a. frustrated
PLB042B	q42b. sad
PLB042C	q42c. enthusiastic
PLB042D	q42d. lonely
PLB042E	q42e. content
PLB042F	q42f. worried
PLB042G	q42g. bored
PLB042H	q42h. happy
PLB042I	q42i. angry
PLB042J	q42j. tired
PLB042K	q42k. stressed
PLB043	q43. felt pain yesterday
Wave 14:	
QLB042A	q42a. frustrated
QLB042B	q42b. sad
QLB042C	q42c. enthusiastic
QLB042D	q42d. lonely
QLB042E	q42e. content
QLB042F	q42f. worried
QLB042G	q42g. bored
QLB042H	q42h. happy
QLB042I	q42i. angry
QLB042J	q42j. tired
QLB042K	q42k. stressed
QLB043	q43. felt pain
Wave 15:	
RLB043A	q43a. frustrated
RLB043B	q43b. sad
RLB043C	q43c. enthusiastic
RLB043D	q43d. lonely
RLB043E	q43e. content
RLB043F	q43f. worried
RLB043G	q43g. bored
RLB043H	q43h. happy
RLB043I	q43i. angry
RLB043J	q43j. tired
RLB043K	q43k. stressed
RLB044	q44. felt pain

### How Constructed:

The following variables pertain to the respondent's activity-related affective experience yesterday. The respondent is given the following prompt, "Please think about the things you did yesterday. How did you spend your time and how did you feel?"

RwWTCHTV indicates whether the respondent watched TV yesterday, and is coded as 0 for no, and 1 for yes.

RwWTCHTMN is available in Waves 11 to 14, indicates the number of minutes the respondent watched TV yesterday and is provided as a continuous value. The respondent can report the number of hours and number of minutes, which have been adjusted to provide the total number of minutes. RwWTCHVTM is available starting in Wave 15, indicates the number of hours the respondent watched TV yesterday and is provided as a categorical value. The respondent can report in the following categories: 0. none, 1. less than 1 hour, 2. 1 hour, 3. 2 to 3 hours, 4. 4 to 6 hours, 5. 7 or more hours. If the respondent did not watch TV yesterday, then RwWTCHTMN and RwWTCHVTM are set to 0.

RwWKVLNTR indicates whether the respondent worked or volunteered yesterday, and is coded as 0 for no, and 1 for yes.

RwWKVLNTRMN indicates the number of minutes the respondent worked or volunteered yesterday and is provided as a continuous value. The respondent can report the number of hours and number of minutes, which have been adjusted to provide the total number of minutes. RwWKVLNTRTM indicates the number of hours the respondent worked or volunteered yesterday and is provided as a categorical value. The respondent can report in the following categories: 1. less than 1 hour 2. 1 hour 3. 2 to 3 hours 4. 4 to 6 hours 5. 7 or more hours. If the respondent did not work or volunteer yesterday, then RwWKVLNTRMN and RwWKVLNTRTM are set to 0.

RwWALKEX is available in Waves 11 to 14, indicates whether the respondent walked or exercised yesterday, and is coded as 0 for no, and 1 for yes. Starting in Wave 15, the respondent was asked separately whether they walked or exercised yesterday. RwWALK indicates whether the respondent walked yesterday, and is coded as 0 for no, and 1 for yes. RwEXER indicates whether the respondent exercised yesterday, and is coded as 0 for no, and 1 for yes.

RwWALKEXMN is available in Waves 11 to 14, indicates the number of minutes the respondent walked or exercised yesterday and is provided as a continuous value. The respondent can report the number of hours and number of minutes, which have been adjusted to provide the total number of minutes. RwWALKTM is available starting in Wave 15, indicates the number of hours the respondent walked yesterday and is provided as a categorical value. The respondent can report in the following categories: 0. none, 1. less than 1 hour, 2. 1 hour, 3. 2 to 3 hours, 4. 4 to 6 hours, 5. 7 or more hours. RwEXERTM is available starting in Wave 15, indicates the number of hours the respondent exercised yesterday and is provided as a categorical value. The respondent can report in the following categories: 0. none, 1. less than 1 hour, 2. 1 hour, 3. 2 to 3 hours, 4. 4 to 6 hours, 5. 7 or more hours. If the respondent did not walk or exercise yesterday, then RwWALKEXMN, RwWALKTM, and RwEXERTM are set to 0.

RwHLTHAC indicates whether the respondent did health-related activities yesterday, other than walking or exercising (e.g., visiting a doctor, taking medications, doing treatments) and is coded as 0 for no, and 1 for yes.

RwHLTHACMN is available in Waves 11 to 14, indicates the number of minutes the respondent did health-related activities yesterday and is provided as a continuous value. The respondent can report the number of hours and number of minutes, which have been adjusted to provide the total number of minutes.

RwHLTHACTM is available starting in Wave 15, indicates the number of hours the respondent did health-related activities yesterday and is provided as a categorical value. The respondent can report in the following categories: 0. none, 1. less than 1 hour, 2. 1 hour, 3. 2 to 3 hours, 4. 4 to 6 hours, 5. 7 or more hours. If the respondent did not do health-related activities yesterday, then RwHLTHACMN and RwHLTHACTM are set to 0.

RwTRVLCOM indicates whether the respondent traveled or commuted yesterday, and is coded as 0 for no, and 1 for yes.

RwTRVLCOMM is available in Waves 11 to 14, indicates the number of minutes the respondent traveled or commuted yesterday and is provided as a continuous value. The respondent can report the number of hours and number of minutes, which have been adjusted to provide the total number of minutes. RwTRVLCOMTM is available starting in Wave 15, indicates the number of hours the respondent travel or commute yesterday and is provided as a categorical value. The respondent can report in the following categories: 0. none, 1. less than 1 hour, 2. 1 hour, 3. 2 to 3 hours, 4. 4 to 6 hours, 5. 7 or more hours. If the respondent did not travel or commute yesterday, then RwTRVLCOMM and RwTRVLCOMTM are set to 0.

RwTMFRND indicates whether the respondent spent time with friends yesterday, and is coded as 0 for no, and 1 for yes.

RwTMFRNDMN is available in Waves 11 to 14, indicates the number of minutes the respondent spent time with friends yesterday and is provided as a continuous value. The respondent can report the number of hours and number of minutes, which have been adjusted to provide the total number of minutes. RwTMFRNDTM is available starting in Wave 15, indicates the number of hours the respondent spent time with friends yesterday and is provided as a categorical value. The respondent can report in the following categories: 0. none, 1. less than 1 hour, 2. 1 hour, 3. 2 to 3 hours, 4. 4 to 6 hours, 5. 7 or more hours. If the respondent did not spend time with friends yesterday, then RwTMFRNDMN and RwTMFRNDTM are set to 0.

RwTMSELF indicates whether the respondent spent time home alone yesterday, and is coded as 0 for no, and 1 for yes.

RwTMSELMN is available in Waves 11 to 14, indicates the number of minutes the respondent spent time home alone yesterday and is provided as a continuous value. The respondent can report the number of hours and number of minutes, which have been adjusted to provide the total number of minutes. RwTMSELFMTM is available starting in Wave 15, indicates the number of hours the respondent spent time home alone yesterday and is provided as a categorical value. The respondent can report in the following categories: 0. none, 1. less than 1 hour, 2. 1 hour, 3. 2 to 3 hours, 4. 4 to 6 hours, 5. 7 or more hours. If the respondent did not spend time home by themselves yesterday, then RwTMSELMN and RwTMSELFMTM are set to 0.

These questions were added to the HRS psychosocial leave-behind survey starting at Wave 11. If the respondent did not return the self-completion questionnaire, then RwwTCHTV, RwwTCHTMN, RwwTCHVTM, RwwKVLNTR, RwwKVLNTRMN, RwwKVLNTRTM, RwwWALKEX, RwwWALK, RwwEXER, RwwWALKEXMN, RwwWALKEXTM, RwwWALKTM, RwwEXERTM, RwwHLTHAC, RwwHLTHACMN, RwwHLTHACTM, RwwTRVLCOM, RwwTRVLCOMM, RwwTRVLCOMTM, RwwTMFRND, RwwTMFRNDMN, RwwTMFRNDTM, RwwTMSELF, RwwTMSELMN, and RwwTMSELFMTM are assigned special missing value .c. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

SwWTCHTV, SwWTCHTMN, and SwWTCHVTM indicate whether and for how many minutes or hours the respondent's spouse watched TV yesterday, respectively, and their values are taken directly from the corresponding respondent variables. SwWKVLNTR, SwWKVLNTRMN, and SwWKVLNTRTM indicate whether and for how many minutes or hours the respondent's spouse worked or volunteered yesterday, respectively, and their values are taken directly from the corresponding respondent variables. SwWALKEX and SwWALKEXMN indicate whether and for how many minutes the respondent's spouse walked or exercised yesterday, respectively, and their values are taken directly from the corresponding respondent variables. SwWALK and SwWALKTM indicate whether and for how many hours the respondent's spouse walked yesterday, respectively, and their values are taken directly from the corresponding respondent variables. SwEXER and SwEXERTM indicate whether and

for how many hours the respondent's spouse exercised yesterday, respectively, and their values are taken directly from the corresponding respondent variables. SwHLTHAC, SwHLTHACMN, and SwHLTHACTM indicate whether and for how many minutes or hours the respondent's spouse did health-related activities yesterday, respectively, and their values are taken directly from the corresponding respondent variables. SwTRVLCOM, SwTRVLCOMMN, and SwTRVLCOMTM indicate whether and for how many minutes or hours the respondent's spouse traveled or commuted yesterday, respectively, and their values are taken directly from the corresponding respondent variables. SwTMFRND, SwTMFRNDMN, and SwTMFRNDTM indicate whether and for how many minutes or hours the respondent's spouse spent time with friends yesterday, respectively, and their values are taken directly from the corresponding respondent variables. SwTMSELF, SwTMSELFMN, and SwTMSELFTM indicate whether and for how many minutes or hours the respondent's spouse spent time home alone yesterday, respectively, and their values are taken directly from the corresponding respondent variables. In addition to the special missing codes used in the respondent variables, the spouse variables employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Questions related to activity-related items were added to HRS leave-behind survey starting in Wave 11.

In Wave 15, the HRS stopped asking the respondent the exact number of hours and number of minutes spent on each of the activities. Instead, the respondent is given the following prompt, "Please think about the things you did yesterday. How did you spend your time? How much time did you spend doing this? 1. less than 1 hour, 2. 1 hour, 3. 2 to 3 hours, 4. 4 to 6 hours, 5. 7 or more hours."

In Wave 15, the respondents were asked whether they walked or exercised separately, whereas these were asked in the same question previously.

## HRS Variables Used:

### Wave 11:

NLB054	q54. time spent watching tv yesterday
NLB055_HR	q55_hr. time watching tv - hours
NLB055_MI	q55_mi. time watching tv - minutes
NLB057	q57. volunteer yesterday
NLB058_HR	q58_hr. time spent on volunteering - hours
NLB058_MI	q58_mi. time spent on volunteering - minutes
NLB061	q61. walked or exercised yesterday
NLB062_HR	q62_hr. time spent waling or exercising - hours
NLB062_MI	q62_mi. time spent waling or exercising - minutes
NLB064	q64. health-related activities yesterday
NLB065_HR	q65_hr. time spent on doing health-related activities -
NLB065_MI	q65_mi. time spent on doing health-related activities -
NLB067	q67. travel or commute yesterday
NLB068_HR	q68_hr. time travelled yesterday - hours
NLB068_MI	q68_mi. time travelled yesterday - minutes
NLB070	q70. socializing with friends yesterday
NLB071_HR	q71_hr. time of socializing with friends - hours
NLB071_MI	q71_mi. time of socializing with friends - minutes
NLB073	q73. being at home yesterday
NLB074_HR	q74_hr. time spent at home - hours
NLB074_MI	q74_mi. time spent at home - minutes

### Wave 12:

OLB047	q47. time spent watching tv yesterday
OLB048_HR	q48_hr. time watching tv - hours
OLB048_MI	q48_mi. time watching tv - minutes
OLB050	q50. volunteer yesterday
OLB051_HR	q51_hr. time spent on volunteering - hours
OLB051_MI	q51_mi. time spent on volunteering - minutes
OLB054	q54. walked or exercised yesterday
OLB055_HR	q55_hr. time spent waling or exercising - hours
OLB055_MI	q55_mi. time spent waling or exercising - minutes

OLB057	q57. health-related activities yesterday
OLB058_HR	q58_hr. time spent on health-related activities - hrs
OLB058_MI	q58_mi. time spent on health-related activities - mins
OLB060	q60. travel or commute yesterday
OLB061_HR	q61_hr. time travelled yesterday - hours
OLB061_MI	q61_mi. time travelled yesterday - minutes
OLB063	q63. socializing with friends yesterday
OLB064_HR	q64_hr. time of socializing with friends - hours
OLB064_MI	q64_mi. time of socializing with friends - minutes
OLB066	q66. being at home yesterday
OLB067_HR	q67_hr. time spent at home - hours
OLB067_MI	q67_mi. time spent at home - minutes
Wave 13:	
PLB047	q47. time spent watching tv yesterday
PLB048_HR	q48_hr. time watching tv - hours
PLB048_MI	q48_mi. time watching tv - minutes
PLB050	q50. volunteer yesterday
PLB051_HR	q51_hr. time spent on volunteering - hours
PLB051_MI	q51_mi. time spent on volunteering - minutes
PLB054	q54. walked or exercised yesterday
PLB055_HR	q55_hr. time spent waling or exercising - hours
PLB055_MI	q55_mi. time spent waling or exercising - minutes
PLB057	q57. health-related activities yesterday
PLB058_HR	q58_hr. time spent on health-related activities - hrs
PLB058_MI	q58_mi. time spent on health-related activities - mins
PLB060	q60. travel or commute yesterday

### How Constructed:

The following variables pertain to the respondent's activity-related affective experience yesterday. The respondent is given the following prompt, "Please think about the things you did yesterday. How did you spend your time and how did you feel?"

RwWTVHPY, RwWTVINT, and RwWTVCON are variables indicating how the respondent felt while watching TV yesterday. RwWTVHPY indicates how happy the respondent felt while watching TV yesterday. RwWTVINT indicates how interested the respondent felt while watching TV yesterday. RwWTVCON indicates how content the respondent felt while watching TV yesterday. RwWTVHPY, RwWTVINT, and RwWTVCON have scores ranging from 0 to 6, where 0 indicates that the respondent did not experience the feeling at all and 6 indicates the feeling was extremely strong. These questions were added to the HRS psychosocial leave-behind survey in Waves 11 to 14. If the respondent did not return the self-completion questionnaire, then these variables are assigned special missing value .c. In the case that the respondent did not watch TV yesterday, RwWTVHPY, RwWTVINT, and RwWTVCON are assigned special missing code .x. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

RwWTVPOS2 is a 2-item index of TV-watching related positive affect. RwWTVPOS2 is the mean of positive affect items RwWTVHPY and RwWTVINT. RwWTVPOS2 is set to .m if either of the two items has a missing value. These questions were added to the HRS psychosocial leave-behind survey in Waves 11 to 14. If the respondent did not return the self-completion questionnaire, then RwWTVPOS2 is assigned special missing value .c. In the case that the respondent did not watch TV yesterday, RwWTVPOS2 is assigned special missing code .x. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

RwWTVPOS3 is a 3-item index of TV-watching related positive affect. RwWTVPOS3 is the mean of positive affect items RwWTVHPY, RwWTVINT, and RwWTVCON. RwWTVPOS3M is the count of the number of missing components for this summary. RwWTVPOS2 is set to .m if more than one item has a missing value, that is RwWTVPOS3M ranges from 2 to 3. These questions were added to the HRS psychosocial leave-behind survey in Waves 11 to 14. If the respondent did not return the self-completion questionnaire, then RwWTVPOS3 and

RwWTVPOS3M are assigned special missing value .c. In the case that the respondent did not watch TV yesterday, RwWTVPOS3 and RwWTVPOS3M are assigned special missing code .x. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

SwWTVHPY, SwWTVINT, and SwWTVCON are variables indicating how the respondent's spouse felt when they were watching TV yesterday, and their values are taken directly from the corresponding respondent variables. SwWTVPOS2 is the respondent's spouse's score of the two-item TV-watching related positive affect summary, and its value is taken directly from the corresponding respondent variables. SwWTVPOS3 and SwWTVPOS3M are the respondent's spouse's scores of the three-item TV-watching related positive affect summary, and their values are taken directly from the corresponding respondent variable. In addition to the special missing codes used in the respondent variables, the spouse variables employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwWVKVHPY, RwWVKVINT, and RwWVKVCON are variables indicating how the respondent felt while working or volunteering. RwWVKVHPY indicates how happy the respondent felt while working or volunteering yesterday. RwWVKVINT indicates how interested the respondent felt while working or volunteering yesterday. RwWVKVCON indicates how content the respondent felt while working or volunteering yesterday. RwWVKVHPY, RwWVKVINT, and RwWVKVCON have scores ranging from 0 to 6, where 0 indicates that the respondent did not experience the feeling at all and 6 indicates the feeling was extremely strong. These questions were added to the HRS psychosocial leave-behind survey in Waves 11 to 14. If the respondent did not return the self-completion questionnaire, then these variables are assigned special missing value .c. In the case that the respondent did not work or volunteer yesterday, RwWVKVHPY, RwWVKVINT, and RwWVKVCON are assigned special missing code .x. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

RwWVKVPOS2 is a 2-item index of working/volunteering related positive affect. RwWVKVPOS2 is the mean of positive affect items RwWVKVHPY and RwWVKVINT. RwWVKVPOS2 is set to .m if either of the two items has a missing value. These questions were added to the HRS psychosocial leave-behind survey in Waves 11 to 14. If the respondent did not return the self-completion questionnaire, then RwWVKVPOS2 is assigned special missing value .c. In the case that the respondent did not work or volunteer yesterday, RwWVKVPOS2 is assigned special missing code .x. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

RwWVKVPOS3 is a 3-item index of working/volunteering related positive affect. RwWVKVPOS3 is the mean of positive affect items RwWVKVHPY, RwWVKVINT, and RwWVKVCON. RwWVKVPOS3M is the count of the number of missing components for this summary. RwWVKVPOS2 is set to .m if more than one item has a missing value, that is RwWVKVPOS3M ranges from 2 to 3. These questions were added to the HRS psychosocial leave-behind survey in Waves 11 to 14. If the respondent did not return the self-completion questionnaire, then RwWVKVPOS3 and RwWVKVPOS3M are assigned special missing value .c. In the case that the respondent did not work or volunteer yesterday, RwWVKVPOS3 and RwWVKVPOS3M are assigned special missing code .x. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

SwWVKVHPY, SwWVKVINT, and SwWVKVCON are variables indicating how the respondent's spouse felt when they were working or volunteering yesterday, and their values are taken directly from the corresponding respondent variables. SwWVKVPOS2 is the respondent's spouse's score of the two-item working/volunteering related positive affect summary, and its value is taken directly from the corresponding respondent variable. SwWVKVPOS3 and SwWVKVPOS3M are the respondent's spouse's scores of the three-item working/volunteering related positive affect summary, and their values are taken directly from the corresponding respondent variables. In addition to the special missing codes used in the respondent variables, the spouse variables employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwEXRHYPY, RwEXRINT, and RwEXRCON are variables indicating how the respondent felt while walking or exercising yesterday. RwEXRHYPY indicates how happy the respondent felt while walking or exercising yesterday. RwEXRINT indicates how interested the respondent felt while walking or exercising yesterday. RwEXRCON indicates how content the respondent felt while walking or exercising yesterday. RwEXRHYPY,

RwEXRINT, and RwEXRCON have scores ranging from 0 to 6, where 0 indicates that the respondent did not experience the feeling at all and 6 indicates the feeling was extremely strong. These questions were added to the HRS psychosocial leave-behind survey in Waves 11 to 14. If the respondent did not return the self-completion questionnaire, then these variables are assigned special missing value .c. In the case that the respondent did not walk or exercise yesterday, RwEXRHYPY, RwEXRINT, and RwEXRCON are assigned special missing code .x. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

RwEXRPOS2 is a 2-item index of walking/exercising related positive affect. RwEXRPOS2 is the mean of positive affect items RwEXRHYPY and RwEXRINT. RwEXRPOS2 is set to .m if either of the two items has a missing value. These questions were added to the HRS psychosocial leave-behind survey in Waves 11 to 14. If the respondent did not return the self-completion questionnaire, then RwEXRPOS2 is assigned special missing value .c. In the case that the respondent did not walk or exercise yesterday, RwEXRPOS2 is assigned special missing code .x. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

RwEXRPOS3 is a 3-item index of walking/exercising related positive affect. RwEXRPOS3 is the mean of positive affect items RwEXRHYPY, RwEXRINT, and RwEXRCON. RwEXRPOS3M is the count of the number of missing components for this summary. RwEXRPOS3 is set to .m if more than one item has a missing value, that is RwEXRPOS3M ranges from 2 to 3. These questions were added to the HRS psychosocial leave-behind survey in Waves 11 to 14. If the respondent did not return the self-completion questionnaire, then RwEXRPOS3 and RwEXRPOS3M are assigned special missing value .c. In the case that the respondent did not walk or exercise yesterday, RwEXRPOS3 and RwEXRPOS3M are assigned special missing code .x. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

SwEXRHYPY, SwEXRINT, and SwEXRCON are variables indicating how the respondent's spouse felt when they were walking or exercising yesterday, and their values are taken directly from the corresponding respondent variables. SwEXRPOS2 is the respondent's spouse's score of the two-item walking/exercising related positive affect summary, and its value is taken directly from the corresponding respondent variable. SwEXRPOS3 and SwEXRPOS3M are the respondent's spouse's scores of the three-item walking/exercising related positive affect summary and their values are taken directly from the corresponding respondent variables. In addition to the special missing codes used in the respondent variables, the spouse variables employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwHLTHPY, RwHLTINT, and RwHLTCON are variables indicating how the respondent felt while doing health-related activities yesterday. RwHLTHPY indicates how happy the respondent felt while doing health-related activities yesterday. RwHLTINT indicates how interested the respondent felt while doing health-related activities yesterday. RwHLTCON indicates how content the respondent felt while doing health-related activities yesterday. RwHLTHPY, RwHLTINT, and RwHLTCON have scores ranging from 0 to 6, where 0 indicates that the respondent did not experience the feeling at all and 6 indicates the feeling was extremely strong. These questions were added to the HRS psychosocial leave-behind survey in Waves 11 to 14. If the respondent did not return the self-completion questionnaire, then these variables are assigned special missing value .c. In the case that the respondent did not do health-related activities yesterday, RwHLTHPY, RwHLTINT, and RwHLTCON are assigned special missing code .x. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

RwHLTPOS2 is a 2-item index of healthy activity related positive affect. RwHLTPOS2 is the mean of positive affect items RwHLTHPY and RwHLTINT. RwHLTPOS2 is set to .m if either of the two items has a missing value. These questions were added to the HRS psychosocial leave-behind survey in Waves 11 to 14. If the respondent did not return the self-completion questionnaire, then RwHLTPOS2 is assigned special missing value .c. In the case that the respondent did not do health-related activities yesterday, RwHLTPOS2 is assigned special missing code .x. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

RwHLTPOS3 is a 3-item index of healthy activity related positive affect. RwHLTPOS3 is the mean of positive affect items RwHLTHPY, RwHLTINT, and RwHLTCON. RwHLTPOS3M is the count of the number of missing

components for this summary. RwHLTPOS2 is set to .m if more than one item has a missing value, that is RwHLTPOS3M ranges from 2 to 3. These questions were added to the HRS psychosocial leave-behind survey in Waves 11 to 14. If the respondent did not return the self-completion questionnaire, then RwHLTPOS3 and RwHLTPOS3M are assigned special missing value .c. In the case that the respondent did not do health-related activities yesterday, RwHLTPOS3 and RwHLTPOS3M are assigned special missing code .x. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

SwHLTHPY, SwHLTINT, and SwHLTCON are variables indicating how the respondent's spouse felt when they were doing health-related activities yesterday, and their values are taken directly from the corresponding respondent variables. SwHLTPOS2 is the respondent's spouse's score of the two-item healthy activity related positive affect summary, and its value is taken directly from the corresponding respondent variable. SwHLTPOS3 and SwHLTPOS3M are the respondent's spouse's scores of the three-item healthy activity related positive affect summary, and their values are taken directly from the corresponding respondent variables. In addition to the special missing codes used in the respondent variables, the spouse variables employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwTRVHPY, RwTRVINT, and RwTRVCON are variables indicating how the respondent felt while traveling or commuting yesterday. RwTRVHPY indicates how happy the respondent felt while traveling or commuting yesterday. RwTRVINT indicates how interested the respondent felt while traveling or commuting yesterday. RwTRVCON indicates how content the respondent felt while traveling or commuting yesterday. RwTRVHPY, RwTRVINT, and RwTRVCON have scores ranging from 0 to 6, where 0 indicates that the respondent did not experience the feeling at all and 6 indicates the feeling was extremely strong. These questions were added to the HRS psychosocial leave-behind survey in Waves 11 to 14. If the respondent did not return the self-completion questionnaire, then these variables are assigned special missing value .c. In the case that the respondent did not travel or commute yesterday, RwTRVHPY, RwTRVINT and RwTRVCON are assigned special missing code .x. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

RwTRVPOS2 is a 2-item index of traveling/commuting related positive affect. RwTRVPOS2 is the mean of positive affect items RwTRVHPY and RwTRVINT. RwTRVPOS2 is set to .m if either of the two items has a missing value. These questions were added to the HRS psychosocial leave-behind survey in Waves 11 to 14. If the respondent did not return the self-completion questionnaire, then RwTRVPOS2 is assigned special missing value .c. In the case that the respondent did not travel or commute yesterday, RwTRVPOS2 is assigned special missing code .x. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

RwTRVPOS3 is a 3-item index of traveling/commuting related positive affect. RwTRVPOS3 is the mean of positive affect items RwTRVHPY, RwTRVINT, and RwTRVCON. RwTRVPOS3M is the count of the number of missing components for this summary. RwTRVPOS2 is set to .m if more than one item has a missing value, that is RwTRVPOS3M ranges from 2 to 3. These questions were added to the HRS psychosocial leave-behind survey in Waves 11 to 14. If the respondent did not return the self-completion questionnaire, then RwTRVPOS3 and RwTRVPOS3M are assigned special missing value .c. In the case that the respondent did not travel or commute yesterday, RwTRVPOS3 and RwTRVPOS3M are assigned special missing code .x. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

SwTRVHPY, SwTRVINT, and SwTRVCON are variables indicating how the respondent's spouse felt when they were traveling or commuting yesterday, and their values are taken directly from the corresponding respondent variables. SwTRVPOS2 is the respondent's spouse's score of the two-item traveling/commuting related positive affect summary, and its value is taken directly from the corresponding respondent variable. SwTRVPOS3 and SwTRVPOS3M are the respondent's spouse's scores of the three-item traveling/commuting related positive affect summary and their values are taken directly from the corresponding respondent variables. In addition to the special missing codes used in the respondent variables, the spouse variables employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwFRNHPY, RwFRNINT, and RwFRNCON are variables indicating how the respondent felt while spending time with friends yesterday. RwFRNHPY indicates how happy the respondent felt while spending time with friends yesterday. RwFRNINT indicates how interested the respondent felt while spending time with friends yesterday. RwFRNCON indicates how content the respondent felt while spending time with friends yesterday. RwFRNHPY, RwFRNINT, and RwFRNCON have scores ranging from 0 to 6, where 0 indicates that the respondent did not experience the feeling at all and 6 indicates the feeling was extremely strong. These questions were added to the HRS psychosocial leave-behind survey in Waves 11 to 14. If the respondent did not return the self-completion questionnaire, then these variables are assigned special missing value .c. In the case that the respondent did not spend time with friends yesterday, RwFRNHPY, RwFRNINT, and RwFRNCON are assigned special missing code .x. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

RwFRNPOS2 is a 2-item index of spending time with friends related positive affect. RwFRNPOS2 is the mean of positive affect items RwFRNHPY and RwFRNINT. RwFRNPOS2 is set to .m if either of the two items has a missing value. These questions were added to the HRS psychosocial leave-behind survey in Waves 11 to 14. If the respondent did not return the self-completion questionnaire, then RwFRNPOS2 is assigned special missing value .c. In the case that the respondent did not spend time with friends yesterday, RwFRNPOS2 is assigned special missing code .x. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

RwFRNPOS3 is a 3-item index of spending time with friends related positive affect. RwFRNPOS3 is the mean of positive affect items RwFRNHPY, RwFRNINT, and RwFRNCON. RwFRNPOS3M is the count of the number of missing components for this summary. RwFRNPOS2 is set to .m if more than one item has a missing value, that is RwFRNPOS3M ranges from 2 to 3. These questions were added to the HRS psychosocial leave-behind survey in Waves 11 to 14. If the respondent did not return the self-completion questionnaire, then RwFRNPOS3 and RwFRNPOS3M are assigned special missing value .c. In the case that the respondent did not spend time with friends yesterday, RwFRNPOS3 and RwFRNPOS3M are assigned special missing code .x. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

SwFRNHPY, SwFRNINT, and SwFRNCON are variables indicating how the respondent's spouse felt when they were spending time with friends yesterday, and their values are taken directly from the corresponding respondent variables. SwFRNPOS2 is the respondent's spouse's score of the two-item spending time with friends related positive affect summary, and its value is taken directly from the corresponding respondent variable. SwFRNPOS3 and SwFRNPOS3M, SwFRNNEG3, and SwFRNNEG3M are the respondent's spouse's scores of the three-item spending time with friends related positive affect summary, and their values are taken directly from the corresponding respondent variables. In addition to the special missing codes used in the respondent variables, the spouse variables employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwSLFHPY, RwSLFINT, and RwSLFCON are variables indicating how the respondent felt while spending time home alone yesterday. RwSLFHPY indicates how happy the respondent felt while spending time home alone yesterday. RwSLFINT indicates how interested the respondent felt while spending time home alone yesterday. RwSLFCON indicates how content the respondent felt while spending time home alone yesterday. RwSLFHPY, RwSLFINT, and RwSLFCON have scores ranging from 0 to 6, where 0 indicates that the respondent did not experience the feeling at all and 6 indicates the feeling was extremely strong. These questions were added to the HRS psychosocial leave-behind survey in Waves 11 to 14. If the respondent did not return the self-completion questionnaire, then these variables are assigned special missing value .c. In the case that the respondent did not spend time home alone yesterday, RwSLFHPY, RwSLFINT, and RwSLFCON are assigned special missing code .x. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

RwSLFPOS2 is a 2-item index of spending time home alone related positive affect. RwSLFPOS2 is the mean of positive affect items RwSLFHPY and RwSLFINT. RwSLFPOS2 is set to .m if either of the two items has a missing value. These questions were added to the HRS psychosocial leave-behind survey in Waves 11 to 14. If the respondent did not return the self-completion questionnaire, then RwSLFPOS2 is assigned special missing value .c. In the case that the respondent did not spend time home alone yesterday, RwSLFPOS2 is assigned special missing code .x. Don't know, refused, or other missing values are assigned special

missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

RwSLFPOS3 is a 3-item index of spending time home alone related positive affect. RwSLFPOS3 is the mean of positive affect items RwSLFHPY, RwSLFINT, and RwSLFCON. RwSLFPOS3M is the count of the number of missing components for this summary. RwSLFPOS2 is set to .m if more than one item has a missing value, that is RwSLFPOS3M ranges from 2 to 3. These questions were added to the HRS psychosocial leave-behind survey in Waves 11 to 14. If the respondent did not return the self-completion questionnaire, then RwSLFPOS3 and RwSLFPOS3M are assigned special missing value .c. In the case that the respondent did not spend time home alone yesterday, RwSLFPOS3 and RwSLFPOS3M are assigned special missing code .x. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

SwSLFHPY, SwSLFINT, and SwSLFCON are variables indicating how the respondent's spouse felt when they were spending time home alone yesterday, and their values are taken directly from the corresponding respondent variables. SwSLFPOS2 is the respondent's spouse's score of the two-item spending time home alone related positive affect summary, and its value is taken directly from the corresponding respondent variable. SwSLFPOS3 and SwSLFPOS3M are the respondent's spouse's scores of the three-item spending time home alone related positive affect summary, and their values are taken directly from the corresponding respondent variables. In addition to the special missing codes used in the respondent variables, the spouse variables employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Questions related to activity-related positive affect items were added to HRS leave-behind survey in Wave 11 through Wave 14. The questions related to activity-related positive affect items were not asked in Wave 15.

## HRS Variables Used:

### Wave 11:

NLB054	q54. time spent watching tv yesterday
NLB056A	q56_a. watching tv - happy
NLB056B	q56_b. watching tv - interested
NLB056E	q56_e. watching tv - content
NLB057	q57. volunteer yesterday
NLB059A	q59_a. volunteering - happy
NLB059B	q59_b. volunteering - interested
NLB059E	q59_e. volunteering - content
NLB061	q61. walked or exercised yesterday
NLB063A	q63_a. walking - happy
NLB063B	q63_b. walking - interested
NLB063E	q63_e. walking - content
NLB064	q64. health-related activities yesterday
NLB066A	q66_a. activities - happy
NLB066B	q66_b. activities - interested
NLB066E	q66_e. activities - content
NLB067	q67. travel or commute yesterday
NLB069A	q69_a. travel - happy
NLB069B	q69_b. travel - interested
NLB069E	q69_e. travel - content
NLB070	q70. socializing with friends yesterday
NLB072A	q72_a. socializing - happy
NLB072B	q72_b. socializing - interested
NLB072E	q72_e. socializing - content

### How Constructed:

The following variables pertain to the respondent's activity-related affective experience yesterday. The respondent is given the following prompt, "Please think about the things you did yesterday. How did you spend your time and how did you feel?"

RwWTVFRS, RwWTVSAD, RwWTVBOR, and RwWTVPAI are variables indicating how the respondent felt while watching TV yesterday. RwWTVFRS indicates how frustrated the respondent felt while watching TV yesterday. RwWTVSAD indicates how sad the respondent felt while watching TV yesterday. RwWTVBOR indicates how bored the respondent felt while watching TV yesterday. RwWTVPAI indicates how much pain the respondent felt while watching TV yesterday. RwWTVFRS, RwWTVSAD, RwWTVBOR, and RwWTVPAI have scores ranging from 0 to 6, where 0 indicates that the respondent did not experience the feeling at all and 6 indicates the feeling was extremely strong. These questions were added to the HRS psychosocial leave-behind survey in Waves 11 to 14. If the respondent did not return the self-completion questionnaire, then these variables are assigned special missing value .c. In the case that the respondent did not watch TV yesterday, RwWTVFRS, RwWTVSAD, RwWTVBOR, and RwWTVPAI are assigned special missing code .x. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

RwWTVNEG2 is a 2-item index of TV-watching related negative affect. RwWTVNEG2 is the mean of negative affect items RwWTVFRS and RwWTVSAD. RwWTVNEG2 is set to .m if either of the two items has a missing value. These questions were added to the HRS psychosocial leave-behind survey in Waves 11 to 14. If the respondent did not return the self-completion questionnaire, then RwWTVNEG2 is assigned special missing value .c. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. In the case that the respondent did not watch TV yesterday, RwWTVNEG2 is assigned special missing code .x. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

RwWTVNEG3 is a 3-item index of TV-watching related negative affect. RwWTVNEG3 is the mean of negative affect items RwWTVFRS, RwWTVSAD, and RwWTVBOR. RwWTVNEG3M is the count of the number of missing components for this summary. RwWTVNEG3 is set to .m if more than one item has a missing value, that is RwWTVNEG3M ranges from 2 to 3. These questions were added to the HRS psychosocial leave-behind survey in Waves 11 to 14. If the respondent did not return the self-completion questionnaire, then RwWTVNEG2 is assigned special missing value .c. In the case that the respondent did not watch TV yesterday, RwWTVNEG3 and RwWTVNEG3M are assigned special missing code .x. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

SwWTVFRS, SwWTVSAD, SwWTVBOR, and SwWTVPAI are variables indicating how the respondent's spouse felt when they were watching TV yesterday, and their values are taken directly from the corresponding respondent variables. SwWTVNEG2 is the respondent's spouse's score of the two-item watching-TV related negative affect summary, and its value is taken directly from the corresponding respondent variable. SwWTVNEG3 and SwWTVNEG3M are the respondent's spouse's scores of the three-item watching-TV related negative affect summary, and their values are taken directly from the corresponding respondent variables. In addition to the special missing codes used in the respondent variables, the spouse variables employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwWKVFRS, RwWKVSAD, RwWKVBOR, and RwWKVPAI are variables indicating how the respondent felt while working or volunteering. RwWKVFRS indicates how frustrated the respondent felt while working or volunteering yesterday. RwWKVSAD indicates how sad the respondent felt while working or volunteering yesterday. RwWKVBOR indicates how bored the respondent felt while working or volunteering yesterday. RwWKVPAI indicates how much pain the respondent felt while working or volunteering yesterday. RwWKVFRS, RwWKVSAD, RwWKVBOR, and RwWKVPAI have scores ranging from 0 to 6, where 0 indicates that the respondent did not experience the feeling at all and 6 indicates the feeling was extremely strong. These questions were added to the HRS psychosocial leave-behind survey in Waves 11 to 14. If the respondent did not return the self-completion questionnaire, then these variables are assigned special missing value .c. In the case that the respondent did not work or volunteer yesterday, RwWKVFRS, RwWKVSAD, RwWKVBOR, and RwWKVPAI are assigned special missing code .x. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

RwWKVNEG2 is a 2-item index of working/volunteering related negative affect. RwWKVNEG2 is the mean of negative affect items RwWKVFRS and RwWKVSAD. RwWKVNEG2 is set to .m if either of the two items has a missing value. These questions were added to the HRS psychosocial leave-behind survey in Waves 11 to 14. If the respondent did not return the self-completion questionnaire, then RwWKVNEG2 is assigned special missing value .c. In the case that the respondent did not work or volunteer yesterday, RwWKVNEG2 is assigned special missing code .x. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

RwWKVNEG3 is a 3-item index of working/volunteering related negative affect. RwWKVNEG3 is the mean of negative affect items RwWKVFRS, RwWKVSAD, and RwWKVBOR. RwWKVNEG3M is the count of the number of missing components for this summary. RwWKVNEG3 is set to .m if more than one item has a missing value, that is RwWKVNEG3M ranges from 2 to 3. These questions were added to the HRS psychosocial leave-behind survey in Waves 11 to 14. If the respondent did not return the self-completion questionnaire, then RwWKVNEG2 and RwWKVNEG2M are assigned special missing value .c. In the case that the respondent did not work or volunteer yesterday, RwWKVNEG3 and RwWKVNEG3M are assigned special missing code .x. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

SwWKFVFRS, SwWKVVSAD, SwWKVVBOR, and SwWKVPAI are variables indicating how the respondent's spouse felt when they were working or volunteering yesterday, and their values are taken directly from the corresponding respondent variables. SwWKVNEG2 is the respondent's spouse's score of the two-item working/volunteering related negative affect summary, and its value is taken directly from the corresponding respondent variable. SwWKVNEG3 and SwWKVNEG3M are the respondent's spouse's scores of the three-item working/volunteering related negative affect summary, and their values are taken directly from the corresponding respondent variables. In addition to the special missing codes used in the respondent variables, the spouse variables employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwEXRFRS, RwEXRSAD, RwEXRBOR, and RwEXRPAI are variables indicating how the respondent felt while walking or exercising yesterday. RwEXRFRS indicates how frustrated the respondent felt while walking or exercising yesterday. RwEXRSAD indicates how sad the respondent felt while walking or exercising yesterday. RwEXRBOR indicates how bored the respondent felt while walking or exercising yesterday. RwEXRPAI indicates how much pain the respondent felt while walking or exercising yesterday. RwEXRFRS, RwEXRSAD, RwEXRBOR, and RwEXRPAI have scores ranging from 0 to 6, where 0 indicates that the respondent did not experience the feeling at all and 6 indicates the feeling was extremely strong. These questions were added to the HRS psychosocial leave-behind survey in Waves 11 to 14. If the respondent did not return the self-completion questionnaire, then these variables are assigned special missing value .c. In the case that the respondent did not walk or exercise yesterday, RwEXRFRS, RwEXRSAD, RwEXRBOR, and RwEXRPAI are assigned special missing code .x. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

RwEXRNEG2 is a 2-item index of walking/exercising related negative affect. RwEXRNEG2 is the mean of negative affect items RwEXRFRS and RwEXRSAD. RwEXRNEG2 is set to .m if either of the two items has a missing value. These questions were added to the HRS psychosocial leave-behind survey in Waves 11 to 14. If the respondent did not return the self-completion questionnaire, then RwEXRNEG2 is assigned special missing value .c. In the case that the respondent did not walk or exercise yesterday, RwEXRNEG2 is assigned special missing code .x. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

RwEXRNEG3 is a 3-item index of walking/exercising related negative affect. RwEXRNEG3 is the mean of negative affect items RwEXRFRS, RwEXRSAD, and RwEXRBOR. RwEXRNEG3M is the count of the number of missing components for this summary. RwEXRNEG3 is set to .m if more than one item has a missing value, that is RwEXRNEG3M ranges from 2 to 3. These questions were added to the HRS psychosocial leave-behind survey in Waves 11 to 14. If the respondent did not return the self-completion questionnaire, then RwEXRNEG2 and RwEXRNEG2M are assigned special missing value .c. In the case that the respondent did not walk or exercise yesterday, RwEXRNEG3 and RwEXRNEG3M are assigned special missing code .x. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

SwEXRFRS, SwEXRSAD, SwEXRBOR, and SwEXRPAI are variables indicating how the respondent's spouse felt when they were walking or exercising yesterday, and their values are taken directly from the corresponding respondent variables. SwEXRNEG2 is the respondent's spouse's score of the two-item walking/exercising related negative affect summary, and its value is taken directly from the corresponding respondent variable. SwEXRNEG3 and SwEXRNEG3M are the respondent's spouse's scores of the three-item walking/exercising related negative affect summary, and their values are taken directly from the corresponding respondent variables. In addition to the special missing codes used in the respondent variables, the spouse variables employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwHLTFRS, RwHLTSAD, RwHLTBOR, and RwHLTPAI are variables indicating how the respondent felt while doing health-related activities yesterday. RwHLTFRS indicates how frustrated the respondent felt while doing health-related activities yesterday. RwHLTSAD indicates how sad the respondent felt while doing health-related activities yesterday. RwHLTBOR indicates how bored the respondent felt while doing health-related activities yesterday. RwHLTPAI indicates how much pain the respondent felt while doing health-related activities yesterday. RwHLTFRS, RwHLTSAD, RwHLTBOR, and RwHLTPAI have scores ranging from 0 to 6, where 0 indicates that the respondent did not experience the feeling at all and 6 indicates the feeling was

extremely strong. These questions were added to the HRS psychosocial leave-behind survey in Waves 11 to 14. If the respondent did not return the self-completion questionnaire, then these variables are assigned special missing value .c. In the case that the respondent did not do health-related activities yesterday, RwHLTFRS, RwHLTSAD, RwHLTBOR, and RwHLTPAI are assigned special missing code .x. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

RwHLTNEG2 is a 2-item index of healthy activity related negative affect. RwHLTNEG2 is the mean of negative affect items RwHLTFRS and RwHLTSAD. RwHLTNEG2 is set to .m if either of the two items has a missing value. These questions were added to the HRS psychosocial leave-behind survey in Waves 11 to 14. If the respondent did not return the self-completion questionnaire, then RwHLTNEG2 and RwHLTNEG2M are assigned special missing value .c. In the case that the respondent did not do health-related activities yesterday, RwHLTNEG2 and RwHLTNEG2M are assigned special missing code .x. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

RwHLTNEG3 is a 3-item index of healthy activity related negative affect. RwHLTNEG3 is the mean of negative affect items RwHLTFRS, RwHLTSAD, and RwHLTBOR. RwHLTNEG3M is the count of the number of missing components for this summary. RwHLTNEG3 is set to .m if more than one item has a missing value, that is RwHLTNEG3M ranges from 2 to 3. These questions were added to the HRS psychosocial leave-behind survey in Waves 11 to 14. If the respondent did not return the self-completion questionnaire, then RwHLTNEG2 and RwHLTNEG2M are assigned special missing value .c. In the case that the respondent did not do health-related activities yesterday, RwHLTNEG3 and RwHLTNEG3M are assigned special missing code .x. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

SwHLTFRS, SwHLTSAD, SwHLTBOR, and SwHLTPAI are variables indicating how the respondent's spouse felt when they were doing health-related activities yesterday, and their values are taken directly from the corresponding respondent variables. SwHLTNEG2 is the respondent's spouse's score of the two-item healthy activity related negative affect summary, and its value is taken directly from the corresponding respondent variable. SwHLTNEG3 and SwHLTNEG3M are the respondent's spouse's scores of the three-item healthy activity related negative affect summary, and their values are taken directly from the corresponding respondent variables. In addition to the special missing codes used in the respondent variables, the spouse variables employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwTRVFRS, RwTRVSAD, RwTRVBOR, and RwTRVPAI are variables indicating how the respondent felt while traveling or commuting yesterday. RwTRVFRS indicates how frustrated the respondent felt while traveling or commuting yesterday. RwTRVSAD indicates how sad the respondent felt while traveling or commuting yesterday. RwTRVBOR indicates how bored the respondent felt while traveling or commuting yesterday. RwTRVPAI indicates how much pain the respondent felt while traveling or commuting yesterday. RwTRVFRS, RwTRVSAD, RwTRVBOR, and RwTRVPAI have scores ranging from 0 to 6, where 0 indicates that the respondent did not experience the feeling at all and 6 indicates the feeling was extremely strong. These questions were added to the HRS psychosocial leave-behind survey in Waves 11 to 14. If the respondent did not return the self-completion questionnaire, then these variables are assigned special missing value .c. In the case that the respondent did not travel or commute yesterday, RwTRVFRS, RwTRVSAD, RwTRVBOR, and RwTRVPAI are assigned special missing code .x. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

RwTRVNEG2 is a 2-item index of traveling/commuting related negative affect. RwTRVNEG2 is the mean of negative affect items RwTRVFRS and RwTRVSAD. RwTRVNEG2 is set to .m if either of the two items has a missing value. These questions were added to the HRS psychosocial leave-behind survey in Waves 11 to 14. If the respondent did not return the self-completion questionnaire, then RwTRVNEG2 and RwTRVNEG2M are assigned special missing value .c. In the case that the respondent did not travel or commute yesterday, RwTRVNEG2 and RwTRVNEG2M are assigned special missing code .x. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

RwTRVNEG3 is a 3-item index of traveling/commuting related negative affect. RwTRVNEG3 is the mean of negative affect items RwTRVFRS, RwTRVSAD, and RwTRVBOR. RwTRVNEG3M is the count of the number of missing components for this summary. RwTRVNEG3 is set to .m if more than one item has a missing value, that is

RwTRVNEG3M ranges from 2 to 3. These questions were added to the HRS psychosocial leave-behind survey in Waves 11 to 14. If the respondent did not return the self-completion questionnaire, then RwTRVNEG2 and RwTRVNEG2M are assigned special missing value .c. In the case that the respondent did not travel or commute yesterday, RwTRVNEG3 and RwTRVNEG3M are assigned special missing code .x. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

SwTRVFERS, SwTRVSAD, SwTRVBOR, and SwTRVPAI are variables indicating how the respondent's spouse felt when they were traveling or commuting yesterday, and their values are taken directly from the corresponding respondent variables. SwTRVNEG2 is the respondent's spouse's score of the two-item traveling/commuting related negative affect summary, and its value is taken directly from the corresponding respondent variable. SwTRVNEG3 and SwTRVNEG3M are the respondent's spouse's scores of the three-item traveling/commuting related negative affect summary, and their values are taken directly from the corresponding respondent variables. In addition to the special missing codes used in the respondent variables, the spouse variables employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwFRNFERS, RwFRNSAD, RwFRNBOR, and RwFRNPAI are variables indicating how the respondent felt while spending time with friends yesterday. RwFRNFERS indicates how frustrated the respondent felt while spending time with friends yesterday. RwFRNSAD indicates how sad the respondent felt while spending time with friends yesterday. RwFRNBOR indicates how bored the respondent felt while spending time with friends yesterday. RwFRNPAI indicates how much pain the respondent felt while spending time with friends yesterday. RwFRNFERS, RwFRNSAD, RwFRNBOR, and RwFRNPAI have scores ranging from 0 to 6, where 0 indicates that the respondent did not experience the feeling at all and 6 indicates the feeling was extremely strong. These questions were added to the HRS psychosocial leave-behind survey in Waves 11 to 14. If the respondent did not return the self-completion questionnaire, then these variables are assigned special missing value .c. In the case that the respondent did not spend time with friends yesterday, RwFRNFERS, RwFRNSAD, RwFRNBOR, and RwFRNPAI are assigned special missing code .x. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

RwFRNNEG2 is a 2-item index of spending time with friends related negative affect. RwFRNNEG2 is the mean of negative affect items RwFRNFERS and RwFRNSAD. RwFRNNEG2 is set to .m if either of the two items has a missing value. These questions were added to the HRS psychosocial leave-behind survey in Waves 11 to 14. If the respondent did not return the self-completion questionnaire, then RwFRNNEG2 is assigned special missing value .c. In the case that the respondent did not spend time with friends yesterday, RwFRNNEG2 is assigned special missing code .x. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

RwFRNNEG3 is a 3-item index of spending time with friends related negative affect. RwFRNNEG3 is the mean of negative affect items RwFRNFERS, RwFRNSAD, and RwFRNBOR. RwFRNNEG3M is the count of the number of missing components for this summary. RwFRNNEG3 is set to .m if more than one item has a missing value, that is RwFRNNEG3M ranges from 2 to 3. These questions were added to the HRS psychosocial leave-behind survey in Waves 11 to 14. If the respondent did not return the self-completion questionnaire, then RwFRNNEG3 and RwFRNNEG3M are assigned special missing value .c. In the case that the respondent did not spend time with friends yesterday, RwFRNNEG3 and RwFRNNEG3M are assigned special missing code .x. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

SwFRNFERS, SwFRNSAD, SwFRNBOR, and SwFRNPAI are variables indicating how the respondent's spouse felt when they were spending time with friends yesterday, and their values are taken directly from the corresponding respondent variables. SwFRNNEG2 is the respondent's spouse's score of the two-item spending time with friends related negative affect summary, and its value is taken directly from the corresponding respondent variable. SwFRNNEG3 and SwFRNNEG3M are the respondent's spouse's scores of the three-item spending time with friends related negative affect summary, and their values are taken directly from the corresponding respondent variables. In addition to the special missing codes used in the respondent variables, the spouse variables employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwSLFFRS, RwSLFSAD, RwSLFBOR, and RwSLFPAI are variables indicating how the respondent felt while spending time home alone yesterday. RwSLFFRS indicates how frustrated the respondent felt while spending time home alone yesterday. RwSLFSAD indicates how sad the respondent felt while spending time home alone yesterday. RwSLFBOR indicates how bored the respondent felt while spending time home alone yesterday. RwSLFPAI indicates how much pain the respondent felt while spending time home alone yesterday. RwSLFFRS, RwSLFSAD, RwSLFBOR, and RwSLFPAI have scores ranging from 0 to 6, where 0 indicates that the respondent did not experience the feeling at all and 6 indicates the feeling was extremely strong. These questions were added to the HRS psychosocial leave-behind survey in Waves 11 to 14. If the respondent did not return the self-completion questionnaire, then these variables are assigned special missing value .c. In the case that the respondent did not spend time home alone yesterday, RwSLFFRS, RwSLFSAD, RwSLFBOR, and RwSLFPAI are assigned special missing code .x. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

RwSLFNEG2 is a 2-item index of spending time home alone related negative affect. RwSLFNEG2 is the mean of negative affect items RwSLFFRS and RwSLFSAD. RwSLFNEG2 is set to .m if either of the two items has a missing value. These questions were added to the HRS psychosocial leave-behind survey in Waves 11 to 14. If the respondent did not return the self-completion questionnaire, then RwSLFNEG2 is assigned special missing value .c. In the case that the respondent did not spend time home alone yesterday, RwSLFNEG2 is assigned special missing code .x. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

RwSLFNEG3 is a 3-item index of spending time home alone related negative affect. RwSLFNEG3 is the mean of negative affect items RwSLFFRS, RwSLFSAD, and RwSLFBOR. RwSLFNEG3M is the count of the number of missing components for this summary. RwSLFNEG3 is set to .m if more than one item has a missing value, that is RwSLFNEG3M ranges from 2 to 3. These questions were added to the HRS psychosocial leave-behind survey in Waves 11 to 14. If the respondent did not return the self-completion questionnaire, then RwSLFNEG3 and RwSLFNEG3M are assigned special missing value .c. In the case that the respondent did not spend time home alone yesterday, RwSLFNEG3 and RwSLFNEG3M are assigned special missing code .x. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. These variables are set to plain missing (.) for respondents who did not respond to the current wave.

SwSLFFRS, SwSLFSAD, SwSLFBOR, and SwSLFPAI are variables indicating how the respondent's spouse felt when they were spending time home alone yesterday, and their values are taken directly from the corresponding respondent variables. SwSLFNEG2 is the respondent's spouse's score of the two-item spending time home alone related negative affect summary, and its value is taken directly from the corresponding respondent variable. SwSLFNEG3 and SwSLFNEG3M are the respondent's spouse's scores of the three-item spending time home alone related negative affect summary, and their values are taken directly from the corresponding respondent variables. In addition to the special missing codes used in the respondent variables, the spouse variables employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

## Cross Wave Differences in HRS

Questions related to activity-related negative affect items were added to HRS leave-behind survey in Wave 11 through Wave 14. The questions related to activity-related negative affect items were not asked in Wave 15. Note that variables related to how much pain the respondent experienced while doing an activity are not incorporated into either the two-item or three-item negative affect summary scores.

## HRS Variables Used:

Wave 11:

NLB054	q54. time spent watching tv yesterday
NLB056C	q56_c. watching tv - frustrated
NLB056D	q56_d. watching tv - sad
NLB056F	q56_f. watching tv - bored
NLB056G	q56_g. watching tv - pain
NLB057	q57. volunteer yesterday
NLB059C	q59_c.volunteering - frustrated
NLB059D	q59_d. volunteering - sad

NLB059F q59\_f. volunteering - bored  
 NLB059G q59\_g. volunteering - pain  
 NLB061 q61. walked or exercised yesterday  
 NLB063C q63\_c. walking - frustrated  
 NLB063D q63\_d. walking - sad  
 NLB063F q63\_f. walking - bored  
 NLB063G q63\_g. walking - pain  
 NLB064 q64. health-related activities yesterday  
 NLB066C q66\_c. activities - frustrated  
 NLB066D q66\_d. activities - sad  
 NLB066F q59\_f. activities - bored  
 NLB066G q66\_g. activities - pain  
 NLB067 q67. travel or commute yesterday  
 NLB069C q69\_c. travel - frustrated  
 NLB069D q69\_d. travel - sad  
 NLB069F q69\_f. travel - bored  
 NLB069G q69\_g. travel - pain  
 NLB070 q70. socializing with friends yesterday  
 NLB072C q72\_c. socializing - frustrated  
 NLB072D q72\_d. socializing - sad  
 NLB072F q72\_f. socializing - bored  
 NLB072G q72\_g. socializing - pain  
 NLB073 q73. being at home yesterday  
 NLB075C q75\_c. at home - frustrated  
 NLB075D q75\_d. at home - sad  
 NLB075F q75\_f. at home - bored  
 NLB075G q75\_g. at home - pain

## Wave 12:

OLB047 q47. time spent watching tv yesterday  
 OLB049C q49c. watching tv - frustrated  
 OLB049D q49d. watching tv - sad  
 OLB049F q49f. watching tv - bored  
 OLB049G q49g. watching tv - pain  
 OLB050 q50. volunteer yesterday  
 OLB052C q52c. volunteering - frustrated  
 OLB052D q52d. volunteering - sad  
 OLB052F q52f. volunteering - bored  
 OLB052G q52g. volunteering - pain  
 OLB054 q54. walked or exercised yesterday  
 OLB056C q56c. walking - frustrated  
 OLB056D q56d. walking - sad  
 OLB056F q56f. walking - bored  
 OLB056G q56g. walking - pain  
 OLB057 q57. health-related activities yesterday  
 OLB059C q59c. activities - frustrated  
 OLB059D q59d. activities - sad  
 OLB059F q59f. activities - bored  
 OLB059G q59g. activities - pain  
 OLB060 q60. travel or commute yesterday  
 OLB062C q62c. travel - frustrated  
 OLB062D q62d. travel - sad  
 OLB062F q62f. travel - bored  
 OLB062G q62g. travel - pain  
 OLB063 q63. socializing with friends yesterday  
 OLB065C q65c. socializing - frustrated  
 OLB065D q65d. socializing - sad  
 OLB065F q65f. socializing - bored  
 OLB065G q65g. socializing - pain  
 OLB066 q66. being at home yesterday  
 OLB068C q68c. at home - frustrated  
 OLB068D q68d. at home - sad  
 OLB068F q68f. at home - bored  
 OLB068G q68g. at home - pain

## Wave 13:

PLB047 q47. time spent watching tv yesterday  
PLB049C q49c. watching tv - frustrated  
PLB049D q49d. watching tv - sad  
PLB049F q49f. watching tv - bored  
PLB049G q49g. watching tv - pain  
PLB050 q50. volunteer yesterday  
PLB052C q52c. volunteering - frustrated
