

RAND HRS 2008 Fat File

August 2025

1). Important Things to Note:

- a). The RAND HRS 2008 Fat File is based on HRS 2008 Core (Final V3.0, December 2014) data, and the Tracker 2008 (Final V1.0, October 2010) file.
- b). The RAND HRS 2008 Fat File (V3B) corrects an issue for Respondent preload LZ089 and LZ087, as well as the Respondent data model variable LVDATE, which were being overwritten by household module variables. This is corrected and the household variables have been added and renamed as LX089 and LX087 following the naming convention established in the HRS 2014 Core data.
- c). RAND HRS Fat File documentation can be found on the [RAND Center for the Study of Aging](#) website. Please note, however, that these documents are unlike traditional codebooks in the sense that they do not contain information about specific variables from the survey (e.g., frequencies, question text, etc.). For this, we recommend that users examine the [HRS Codebooks](#) and [HRS Questionnaires](#) for the key variables under study.
- d). The Health and Retirement Study (HRS) is a longitudinal household survey conducted by the Institute for Social Research at the University of Michigan with funding from the National Institute on Aging (grant number NIA U01AG009740) and the Social Security Administration. The HRS is extraordinarily rich and complex, and its multidisciplinary data provide researchers the opportunity to investigate many different aspects related to population aging in the United States. With the goal of making the data more accessible to researchers, the RAND Center for the Study of Aging, with funding and support from the National Institute on Aging (NIA) and the Social Security Administration (SSA), has created the RAND HRS data products. This document describes the RAND HRS 2020 Fat File.
